

1. Fencing shall be 42" in height and constructed in accordance with the latest Maryland State Highway Details for Chain Link Fence. The specification for a 6" fence shall be used, substituting 42" fabric and 6" length posts.
2. Chain link fence shall be fastened securely to the fence posts with wire ties. The lower tension wire, brace and truss rods, drive anchors and post caps are not required except on the ends of the fence.
3. Filter cloth shall be fastened securely to the chain link fence with ties spaced every 24" at the top and mid section.
4. Filter cloth shall be embedded a minimum of 6" into the ground.
5. When two sections of filter cloth adjoin each other, they shall be overlapped by 6" and folded.
6. Maintenance shall be performed as needed and silt buildup removed when "bulges" develop in the silt fence, or when silt reaches 50% of fence height.
7. Filter cloth shall be fastened securely to each fence post with wire ties or staples at 1' to the mid section and shall meet the following requirements for Geotextile Class F:
- | | | |
|----------------------|------------------|----------------|
| Tensile Strength | 50 lbs/in (min) | Test: MSHT 509 |
| Tensile Modulus | 20 lbs/in (min) | Test: MSHT 509 |
| Flow Rate | 0.3 gpm/ft (min) | Test: MSHT 322 |
| Filtering Efficiency | 75% (min) | Test: MSHT 322 |

1. STONE SIZE - USE 2" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH - AS REQUIRED, BUT NOT LESS THAN 50 FEET EXCEPT ON A SINGLE RESIDENCE LOT WHERE A 30 FOOT MINIMUM LENGTH WOULD APPLY.
3. THICKNESS - NOT LESS THAN 6 INCHES.
4. WIDTH - TEN (10) FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS.
5. FILTER CLOTH - WILL BE PLACED OVER THE ENTIRE AREA PRIOR TO PLACING OF STONE. FILTER WILL NOT BE REQUIRED ON A SINGLE FAMILY RESIDENCE LOT.
6. SURFACE WATER - ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED ACROSS THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BEEM WITH 15 SLOPES WILL BE PERMITTED.
7. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING - WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHTS-OF-WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

1. A Minimum of 48 Hours Notice Must be Given To The Howard County Department of Inspection and Permits, Sediment Control Division Prior To The Start Of Any Construction (133-1055).
2. All Vegetative And Structural Practices Are To Be Installed According To The Provisions Of This Plan And Are To Be In Conformance With The Most Current Maryland Standards And Specifications For Soil Erosion And Sediment Control And Revisions Thereto.
3. Following Initial Soil Disturbance Or Re-Disturbance, Permanent Or Temporary Stabilization Shall Be Completed Within 7 Calendar Days For All Perimeter Sediment Control Structures, Dikes, Perimeter Slopes And All Slopes Steeper Than 3:1. By 14 Days As To All Other Disturbed Or Graded Areas On The Project Site. As To All Other Disturbed Or Graded Areas On The Project Site.
4. All Sediment Traps/Basins Show Must Be Fenced And Warning Signs Posted Around Their Perimeter In Accordance With Vol. 1, Chapter 12. Of The Howard County Design Manual, Storm Drainage, Chapter 12. Of The Howard County Design Manual, Storm Drainage.
5. Disturbed Areas Must Be Stabilized Within The Time Period Specified Above In Accordance With The 1996 Maryland Standards And Specifications For Soil Erosion And Sediment Control For Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), And Mulching (Sec. 50). Temporary Stabilization With Mulch Alone Can Only Be Done When Recommended Seeding Dates Do Not Allow For Proper Germination And Establishment Of Grasses.
6. All Sediment Control Structures Are To Remain In Place And Are To Be Maintained In Operation Until Permanent For Their Removal Has Been Obtained From The Howard County Sediment Control Inspector.
7. Site Analysis:
 Total Area Of Site: 0.360 Acres
 Area Disturbed: 0.215 Acres
 Area To Be Seeded Or Placed: 0.265 Acres
 Area To Be Vegetatively Stabilized: 15.2 Acres
 Total Cut: 3.25 Acres
 Off-Site Waste/Borrow Area Location: N/A/CALVA.
8. Any Sediment Control Practice Which Is Disturbed By Grading Activity For Placement Of Utilities Must Be Replaced On The Same Day Of Disturbance.
9. Additional Sediment Controls Must Be Provided, If Deemed Necessary By The Howard County Sediment Control Inspector.
10. On All Sites With Disturbed Areas In Excess Of 2 Acres, Approval Of The Inspection Agency Shall Be Requested Upon Completion Of Installation Of Perimeter Erosion And Sediment Controls, But Before Proceeding With Any Other Earthwork. Approval May Not Be Authorized Until The Initial Approval By The Inspection Agency Is Made.
11. Trenches For The Construction Of Utilities Is Limited To Three Pipe Lengths Or That Which Shall Be Back-Filled And Stabilized Within One Working Day, Whichever Is Shorter.

1. Obtain Grading Permit.
2. Install Sediment and Erosion Control Devices as Shown on Plan.
3. Clear and Grub to Limits of Disturbance and Mass Grade to Sun-Base.
4. Install Temporary Seeding.
5. Construct Utilities (Storm Drain, Water and Sewer).
6. Construct Buildings.
7. Grade Roads, Curbs, and Sidewalk and Install Sub-Base and Sidewalks.
8. Final Grade Site and Install Permanent Seeding and Landscape.
9. Remove Sediment Control Devices as Upland Areas Are Stabilized and Permission is Granted by E/S Control Inspector.

| 1-22-02 | REVISE NOTE TO "TO REMAIN" FOR POWER POLE & GUY WIRES | |
| 5-14-01 | REVISE YORKSHIRE MANOR FROM REV. TO 01d MODEL | |
| | REVISION BLOCK | |

- Using vegetation as cover for barren soil to protect it from forces that cause erosion. Vegetative stabilization is used to promote the establishment of vegetation on exposed soil. When soil is stabilized with vegetation, the soil is less likely to erode and more likely to allow infiltration of rainfall, thereby reducing sediment loads and run-off to downstream areas, and improving wildlife habitat and visual resources.
- CONSTRUCTION PRACTICES APPLIED**
- This practice shall be used on denuded areas as specified on the plan and may be used on highly erodible or critically eroding areas. The specification is divided into Temporary Seeding, to quickly establish vegetative cover for short duration (up to one year), and Permanent Seeding, for long term vegetative cover. Examples of Application: Temporary Seeding: Areas of Temporary Soil Disturbance, graded areas being left idle between construction phases, earth dikes, etc. and for Permanent Seeding: tree banks, dikes, cut and fill slopes and other areas at final grade, former erodible and/or denuded areas, etc.
- EFFECTS ON WATER QUALITY AND QUANTITY**
- Planting vegetation in disturbed areas will have an effect on the water budget, especially on volumes and rates of runoff. Infiltration evaporation, transpiration, precipitation and groundwater recharge. Vegetation cover will increase organic matter content and improve the water holding capacity of the soil and subsequent plant growth. Vegetation will help reduce the movement of sediment, nutrients, and other chemicals down slope by runoff to receiving waters. Plants will also help protect groundwater supplies by assimilating those substances present within the root zone. Sediment control devices must remain in place during grading, seedbed preparation, seeding, mulching and vegetative establishment to prevent large quantities of sediment and associated chemicals and nutrients from washing into surface waters.
- SECTION 1 - VEGETATIVE STABILIZATION METHODS AND MATERIALS**
- A. Site Preparation**
1. Install erosion and sediment control structures (either temporary or permanent) such as diversion, grade stabilization structures, berms, wirewraps, or sediment control basins.
 2. Perform all grading operations at right angles to the slope. Final grading and shaping is not usually necessary for temporary seeding.
 3. Schedule required soil tests to determine soil amendment composition and application rates for sites having disturbed areas over 5 acres.
- B. Soil Amendments (Fertilizer and Lime Specifications)**
- Soil tests must be performed to determine the exact ratio and application rates for both lime and fertilizer on sites having disturbed areas over 5 acres. Soil analysis may be performed by the University of Maryland or a recognized commercial laboratory. Soil samples taken for engineering purposes may also be used for chemical analyses.
- ii. Fertilizers shall be uniform in composition, free flowing and suitable for accurate application by broadcast equipment. Fertilizers shall be delivered to the site fully baled according to the applicable fertilizer laws and shall bear the name, trade name, trademark and warranty of the producer.**
- iii. Lime materials shall be ground limestone hydrated or burnt lime may be substituted which contains at least 90% calcium oxide (CaO) or 75% calcium hydroxide (Ca(OH)2). Lime shall be applied to such fineness that at least 50% will pass through a #20 mesh sieve and 90-100% will pass through a #20 sieve.**
- iv. Incorporate lime and fertilizer into the top 3-5" of soil by discing or other suitable means.**
- C. Seedbed Preparation**
- i. Seeding**
1. Seeded preparation shall consist of loosening soil to a depth of 3" to 5" by means of suitable construction equipment, such as disc, harrow or chisel, or rippers mounted on construction equipment. After the soil is loosened it should not be rolled or dragged smooth, but left in the roughened condition. Slope areas greater than 3:1 should be tracked leaving the surface in an irregular condition with ridges running parallel to the contour of the slope.
 2. Apply fertilizer and lime as prescribed on the plan.
 3. In composite lime and fertilizer into the top 3-5" of soil by discing or other suitable means.
- ii. Minimum soil conditions required for permanent vegetative establishment:**
1. Soil shall be between 6.0 and 8.0 pH.
 2. Soils shall be less than 500 parts per million (ppm) of total soluble salts.
 3. The soil shall contain sufficient organic matter to permit adequate root penetration.
 4. Soil shall contain sufficient pore space to permit adequate root penetration.
 5. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 6. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 7. Apply soil amendments as per soil test or as included on the plan.
 8. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 9. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 10. Apply soil amendments as per soil test or as included on the plan.
 11. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 12. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 13. Apply soil amendments as per soil test or as included on the plan.
 14. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 15. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 16. Apply soil amendments as per soil test or as included on the plan.
 17. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 18. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 19. Apply soil amendments as per soil test or as included on the plan.
 20. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 21. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 22. Apply soil amendments as per soil test or as included on the plan.
 23. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 24. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 25. Apply soil amendments as per soil test or as included on the plan.
 26. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 27. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 28. Apply soil amendments as per soil test or as included on the plan.
 29. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 30. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 31. Apply soil amendments as per soil test or as included on the plan.
 32. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 33. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 34. Apply soil amendments as per soil test or as included on the plan.
 35. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 36. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 37. Apply soil amendments as per soil test or as included on the plan.
 38. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 39. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 40. Apply soil amendments as per soil test or as included on the plan.
 41. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 42. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 43. Apply soil amendments as per soil test or as included on the plan.
 44. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 45. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 46. Apply soil amendments as per soil test or as included on the plan.
 47. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 48. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 49. Apply soil amendments as per soil test or as included on the plan.
 50. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 51. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 52. Apply soil amendments as per soil test or as included on the plan.
 53. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 54. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 55. Apply soil amendments as per soil test or as included on the plan.
 56. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 57. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 58. Apply soil amendments as per soil test or as included on the plan.
 59. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 60. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 61. Apply soil amendments as per soil test or as included on the plan.
 62. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 63. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 64. Apply soil amendments as per soil test or as included on the plan.
 65. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 66. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 67. Apply soil amendments as per soil test or as included on the plan.
 68. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 69. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 70. Apply soil amendments as per soil test or as included on the plan.
 71. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 72. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 73. Apply soil amendments as per soil test or as included on the plan.
 74. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 75. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 76. Apply soil amendments as per soil test or as included on the plan.
 77. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 78. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 79. Apply soil amendments as per soil test or as included on the plan.
 80. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 81. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 82. Apply soil amendments as per soil test or as included on the plan.
 83. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 84. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 85. Apply soil amendments as per soil test or as included on the plan.
 86. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 87. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 88. Apply soil amendments as per soil test or as included on the plan.
 89. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 90. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 91. Apply soil amendments as per soil test or as included on the plan.
 92. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 93. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 94. Apply soil amendments as per soil test or as included on the plan.
 95. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 96. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 97. Apply soil amendments as per soil test or as included on the plan.
 98. If these conditions cannot be met by soil in existing topsoil, topsoil shall be replaced in accordance with Section 21 Standard and Specification for Topsoil.
 99. Areas previously graded to conform with the drawings shall be maintained in a true and even grade, then scarified or otherwise loosened to a depth of 3-5" to permit bonding of the topsoil to the surface area and to create horizontal erosion check slots to prevent topsoil from sliding down a slope.
 100. Apply soil amendments as per soil test or as included on the plan.

- SEED SPECIFICATIONS**
- A. Seed Requirements**
1. All seed must meet the requirements of the Maryland State Seed Law. All seed shall be subject to a germination test immediately preceding the date of sowing such material on the job.
 2. Seed shall be clean, free of weed seeds, and free of any other material that would interfere with the germination of the seed.
 3. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 4. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 5. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 6. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 7. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 8. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 9. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 10. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 11. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 12. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 13. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 14. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 15. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 16. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 17. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 18. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 19. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 20. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 21. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 22. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 23. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 24. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 25. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 26. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 27. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 28. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 29. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 30. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 31. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 32. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 33. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 34. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 35. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 36. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 37. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 38. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 39. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 40. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 41. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 42. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 43. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 44. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 45. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 46. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 47. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 48. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 49. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 50. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 51. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 52. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 53. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 54. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 55. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 56. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 57. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 58. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 59. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 60. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 61. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 62. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 63. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 64. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 65. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 66. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 67. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 68. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 69. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 70. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 71. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 72. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 73. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 74. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 75. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 76. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 77. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 78. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 79. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 80. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 81. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 82. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 83. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 84. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 85. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 86. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 87. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 88. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 89. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 90. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 91. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 92. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 93. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 94. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 95. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 96. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 97. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 98. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 99. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.
 100. Seed shall be of a variety that is adapted to the soil conditions and climate of the area.

- SEEDING**
- A. Seeding**
1. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 2. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 3. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 4. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 5. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 6. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 7. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 8. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 9. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 10. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 11. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 12. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 13. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 14. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 15. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 16. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 17. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 18. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 19. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 20. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 21. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding (Sec. 50), and Mulching (Sec. 50).
 22. Seeding shall be completed within the time period specified above in accordance with the 1996 Maryland Standards and Specifications for Soil Erosion and Sediment Control for Permanent Seeding (Sec. 50), Temporary Seeding
