GENERAL NOTES (WHERE APPLICABLE)

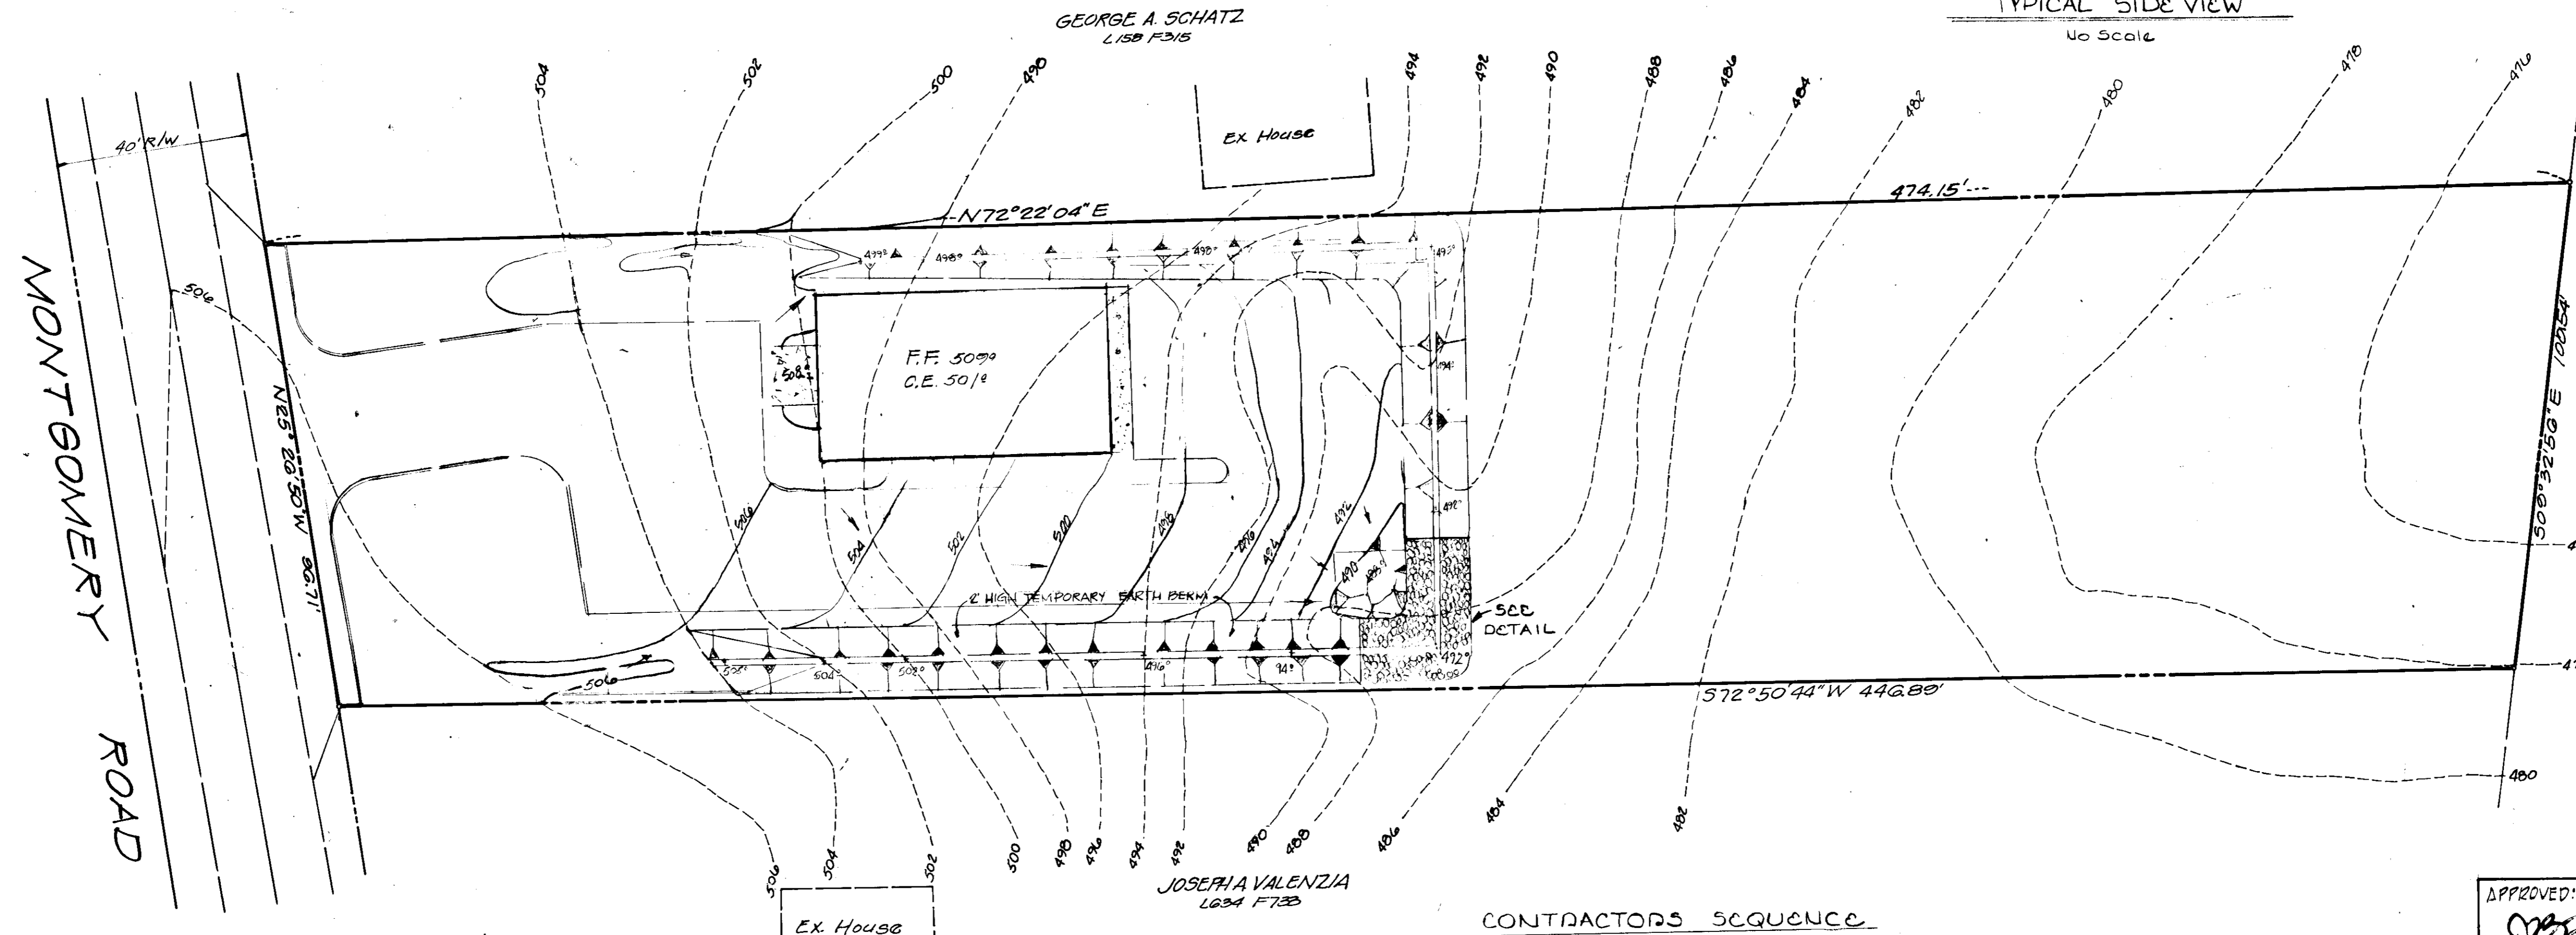

- Sediment trapped in basins or other traps will be removed upon reaching the the specified elevation, or as directed by the Howard Soil Conservation District, as a part of normal maintenance procedure.
- Constructed berms, dikes, dams, etc. will be compacted by several passes with the constructing equipment (bulldozer, backhoe or other heavy equipment/or by use of a suitable roller)
- Structural sediment control measures, including their stabilization by seeding or sodding will be installed prior to any other grading on the site.
- Diversion berms or dikes will have a positive grade to an undisturbed area or onto a grade stabilization structure of adequate design.
- Proposed berms, dikes, dams, waterways, etc. will be stabilized by seeding to permanent, semi-permanent, or temporary seed mixtures as per Specification #11A under "STABILIZATION SPECIFICATIONS"
- All areas disturbed by on-site grading, that will not be constructed upon, within 12 months, are to be stabilized with a semi-permanent type seeding and mulching as per Specification #12 under "STABILIZATION SPECIFICATIONS"
- All areas disturbed by on-site grading that will not be constructed upon, within 6 months, are to be stabilized with a temporary seeding and mulching (Standards and Specifications for Soil Erosion and Sediment Control in Urbanizing Areas, as defined hereon).
- All areas disturbed by on-site grading on which permanent or semi-permanent seeding (after October 15) or temporary seeding (after November 15) cannot be made, will be treated by mulching as per Specification #11C under "STABILIZATION SPECIFICATIONS."
- All disturbed areas to be stabilized by sodding will be treated per Specification #12 under "STABILIZATION SPECIFICATIONS."
- Structural measures, such as berms, dikes, traps, basins, etc. will be installed and stabilized according to this plan prior to any other grading, clearing, or disturbance of the existing surface of the site.
- All structural sediment control measures are to remain in place until permission for their removal has been obtained from the Howard Soil Conservation District, phone 465-3180 or 465-5000, ext. 92B
- Notify the Howard Soil Conservation District at least 24 hours before starting any work, phone 465-3180 or 465-5000, ext. 92B.
- On-site inspection and maintenance of all sediment control measures, including clean out of sediment traps and berms, and proper establishment of all planned vegetative measures will be the responsibility of the Developer or his representative on the site, on a continuing, day to day basis.
- In those cases where sediment control structures are to remain on-site as permanent measures, the Developer shall so indicate, and shall provide evidence that a long range maintenance agreement has been provided for.

STABILIZATION SPECIFICATIONS

- PERMANENT SEEDING**
 - Seed bed preparation: apply 25 lbs. of 10-10-10 fertilizer per 1000 Sq. Ft. harrow or disc into soil to be a depth of 3" to 4". Final disc to be on contour. Apply pulverized ground limestone 50 lbs. per 1000 Sq. Ft.
 - Seeding: Apply 5-7 lbs. per 1000 Sq. Ft. Kentucky 31 Tall Fescue on moist seed bed with suitable equipment, minimum coverage 1/4".
 - Mulching: Immediately after seeding uniformly mulch entire area with underweathered small grain straw at the rate of 1/2 to 2 tons per acre. Mulch to be anchored with metal anchoring tool on the contour or asphalt mulch tie down method.
- SODDING**
 - Sod shall be Maryland State approved sod and shall meet all publicize state standards.
 - Apply 25 lbs. of 10-10-10 fertilizer per 1000 Sq. Ft. Harrow or disc into soil. Apply pulverized limestone at a minimum of 50 lbs. per 1000 Sq. Ft.
 - On slopes sod shall be laid with staggered joints and secured by tamping or pegging.
- TEMPORARY STABILIZATION** for periods other than listed in 2(a) above.
 - Prepare seed bed as in 2(a) above.
 - Provide temporary seeding with 150 lbs/acre annual rye seed and
 - Mulch per specifications as in 2(c) above.
- If temporary stabilization is required permanent seeding shall be performed during the next applicable period.

- CONTRACTORS SEQUENCE**
- PHASE I.** Clearing as required. Removal of existing structures and trees.
 - PHASE II.** Installation and seeding of sediment control measures construction of temporary rip-rap outfall.
 - PHASE III.** Rough grading. Temporary vegetative establishment as required on slope areas less than 3:1. Permanent vegetative establishment on slope areas 3:1 or greater. Maintenance of sediment control measures.
 - Foundation Excavation
 - PHASE IV.** Construction of utilities and storm drains. Placement of subgrade material and finished grading. Paving.
 - PHASE V.** Permanent vegetative establishment on all finish graded areas to be stabilized. Removal of sediment control measures and restoration and stabilization of sediment basin area.
 - PHASE VI.** Maintenance by owner.
