Construction Specifications

1. The stone shall be crushed stone. Gravel may be used if grouted where not available. The stone shall meet MSHA Size No. 3 or AASHTO Designation M43 Size No. 3 or 24.
2. The crest of the stone dike shall be at least six inches lower than the lowest elevation of the top of the earth dike and shall be level.
3. The stone outlet structure shall be embedded into the soil a minimum of four inches.
4. The minimum length, in feet, of the crest of the stone outlet structure shall be equal to six times the number of acres of contributing drainage area.
5. The stone outlet structure shall be inspected after each rain, and the stone shall be replaced when the structure ceases to function as intended due to accumulation among the stone, washout, construction traffic damage, etc.

Standard Symbol — SCD
* Drainage area less than 5 Acres

CONSTRUCTION SPECIFICATIONS

1. Sediment shall be removed and trap restored to its original dimensions when the sediment has accumulated to a depth of one-half the depth of the trap. Removed sediment shall be deposited in a suitable area and in such manner that it will not erode.
2. The structure shall be inspected after each rain and repairs made as needed.
3. Construction operations shall be carried out in such a manner that erosion and water pollution shall be minimized.
4. The sediment trap shall be removed and area stabilized when the remaining drainage area has been properly stabilized.
5. All cut and fill slopes shall be 2:1 or flatter.
