

GENERAL NOTES

- The land included is zoned R-20 per 8.2.85 Comprehensive Zoning Plan.
- Coordinates are based on Md State Plane as projected by Ho Co Monuments #3440001 & #3440002.
- All roads are public and existing.
- Any damage to county owned rights of way to be corrected at the Developer's expense.
- Total Area included: 0.34243 Acres
- Total number of Lots: 1
- The contractor or developer shall contact the Construction Inspection/Survey Division, 24 hrs in advance of commencement of work at 992-2417 or 992-2418.
- Maximum Building Coverage: 30% per lot.

SPECIAL NOTES

- Approved Road Construction Plans shall be used for all public utilities.
- Public water & sewer shown for reference only. For more detailed information - see water and sewer plans Contract No 24-1510-2.
- The water and sewer house connections not included in a "Developer's Agreement" shall conform to Howard Co Plumbing Code. The on-site WHC shall be 1" copper and the SMC shall be 4" iron.
- Stormwater Management waived in accordance with previously approved plan No F-86-229.
- For flag or pipe stem lots, refuse collection, snow removal, and road maintenance to be provided at the junction of flag or pipe stem and the road R/W and not onto the flag or pipe stem driveway.

BUILDING RESTRICTION LINES
FRONT: 40 Min (except where noted)
SIDE: 10 Min
REAR: 30 Min

LEGEND:

- Contour Interval 2 ft.
- Existing Contour ----- 520
- Proposed Contour ----- 470
- Direction of Drainage
- Spot Elevation +70'
- Straw Bale Dike or Silt Fence SBD/S
- Stabilized Construction Entrance SCE

PERMANENT SEEDING NOTES

Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.

Seeded Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.

Soil Amendments: In lieu of soil test recommendations, use one of the following schedules

1) Preferred - Apply 2 tons per acre dolomitic limestone (.92 lbs/1000 sq ft) and 600 lbs per acre 10-10-10 fertilizer (.14 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil. At time of seeding, apply 400 lbs per acre 30-0-0 urea/fertilizer (9 lbs/1000 sq ft).

2) Acceptable - Apply 2 tons per acre dolomitic limestone (.92 lbs/1000 sq ft) and 1000 lbs per acre 10-10-10 fertilizer (.23 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil.

Seeding - For the periods March 1 thru April 30, and August 1 thru October 15, seed with 60 lbs per acre straw mulch (1 lb/1000 sq ft) in the Kentucky 31 Tall Fescue mix, 1 lb per acre, seed with 50 lbs Kentucky 31 Tall Fescue mix, 2 lbs per acre, 1.05 lbs/1000 sq ft) of weeping lovegrass. During the period of October 16 thru February 28, protect site by: Option (1) 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring. Option (2) Use mulch. Option (3) Seed with 60 lbs/acre Kentucky 31 Tall Fescue and mulch with 2 tons/acre well anchored straw.

Mulching - Apply 1 to 2 tons per acre (.70 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using pitch anchoring tool or 115 gallons per acre (.5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes, 8 feet or higher, use 348 gallons per acre (.8 gal/1000 sq ft) for anchoring.

Maintenance - Inspect all seeded areas and make needed repairs, replacements and resodding.

TEMPORARY SEEDING NOTES

Apply to graded or cleared areas likely to be redisturbed where a short-term vegetative cover is needed.

Seeded Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.

Soil Amendments: Apply 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft)

Seeding - For periods March 1 thru April 30 and from August 15 thru November 15, seed with .25 bushel per acre of annual rye (.12 lbs/1000 sq ft). For the period May 1 thru August 14, seed with 3 lbs per acre of weeping lovegrass (.07 lbs/1000 sq ft). For the period November 16 thru February 28, protect site by applying 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring, or use mulch.

Mulching - Apply 1 to 2 tons per acre (.70 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using pitch anchoring tool or 115 gallons per acre (.5 gal/1000 sq ft) for anchoring areas. On slopes, 8 ft or higher, use 348 gal per acre (.8 gal/1000 sq ft) for anchoring.

Refer to the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for rate and methods not covered.

SEDIMENT CONTROL NOTES

1) Minimum of 3 days notice must be given to the County Health Officer of inspection and services prior to the start of construction (1983-537)

2) All vegetative and structural practices are to be installed according to the provisions of this plan and are to be in conformance with the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL

3) Following initial soil disturbance or re-disturbance, temporary stabilization shall be completed within: a) 7 calendar days for all perimeter sediment control structures, dikes, perimeter slopes and all slopes greater than 3:1; b) 14 days as to all other disturbed areas and the project.

4) All sediment control basins should have fenced and warning signs posted around their perimeter in accordance with Vol. 1, Chapter 12, of the HOWARD COUNTY DESIGN MANUAL, Storm Drainage.

5) All disturbed areas must be stabilized within the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for permanent seedings (Sec. 5.1) and (Sec. 5.4) Temporary stabilization with which alone can only be done when re-vegetation seeding dates do not allow for proper germination and establishment of grasses.

6) All sediment control structures are to remain in place and are to be maintained in operative condition until their removal has been obtained from the Howard County Sediment Control Inspector.

7) Site Analysis:
Total Area of Site 0.34243 Acres
Area Disturbed 0.195 Acres
Area to be roofed or paved 0.046 Acres
Area to be vegetatively stabilized 0.269 Acres
Total Cut Cu. yds
Total Fill Cu. yds
Offsite waste/borrow area location N/A

8) Any sediment control practice which is disturbed by grading activity for placement of utilities must be repaired on the disturbed area.

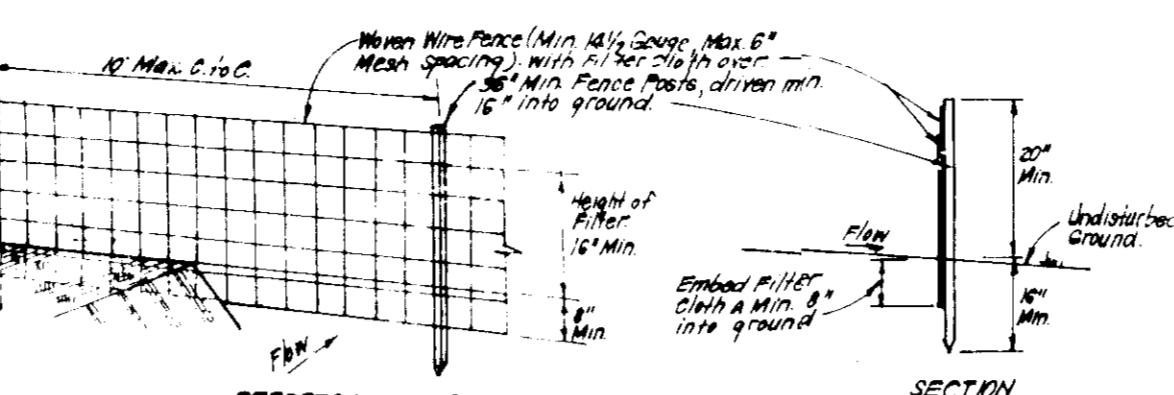

9) Additional sediment control must be provided, if deemed necessary by the Howard County DEW sediment control inspector.

10) On areas with disturbed areas in excess of 2 acres, approval of the inspection agency shall be obtained upon completion of installation of perimeter erosion and sediment controls, but before proceeding with any other earth disturbance or grading. Other building or grading activities may be undertaken until this initial approval by the inspection agency is made.

11) If houses are to be constructed on an "As-Built" basis, at least one Single Lot Sediment Control as shown below shall be implemented.

12) All pipes to be blocked at the end of each day (see detail below). N/A

13) The total amount of straw bale dikes/silt fence equals 270 ft.

PERSPECTIVE VIEW

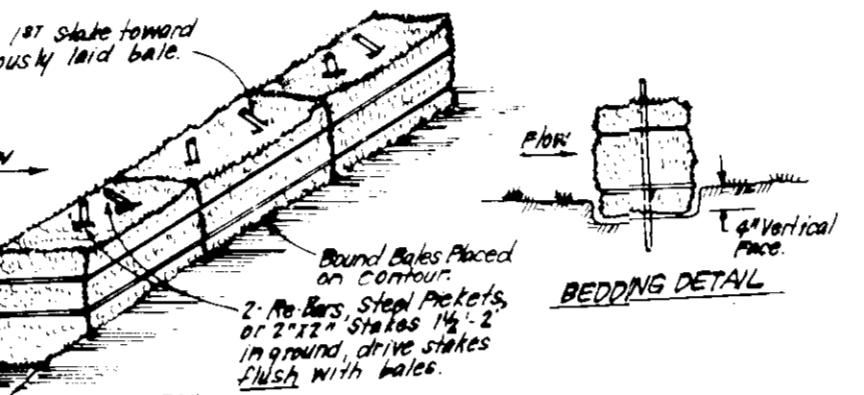

1) Woven Wire Fence (Min. 4'6" High, Max 6'6") Mesh Specified: 1/2" x 1" x 1/2" x 1" Pvc Coated, diamond mesh 16" into ground

2) Filter Cloth: Filter Cloth, Mirro-Wool, Stabilization or Approval

3) Prefabricated Units: Geotextile, Geotextile, Enviro-Gard, Enviro-Gard, equal

SILT FENCE DETAIL (9)

IN SCALE

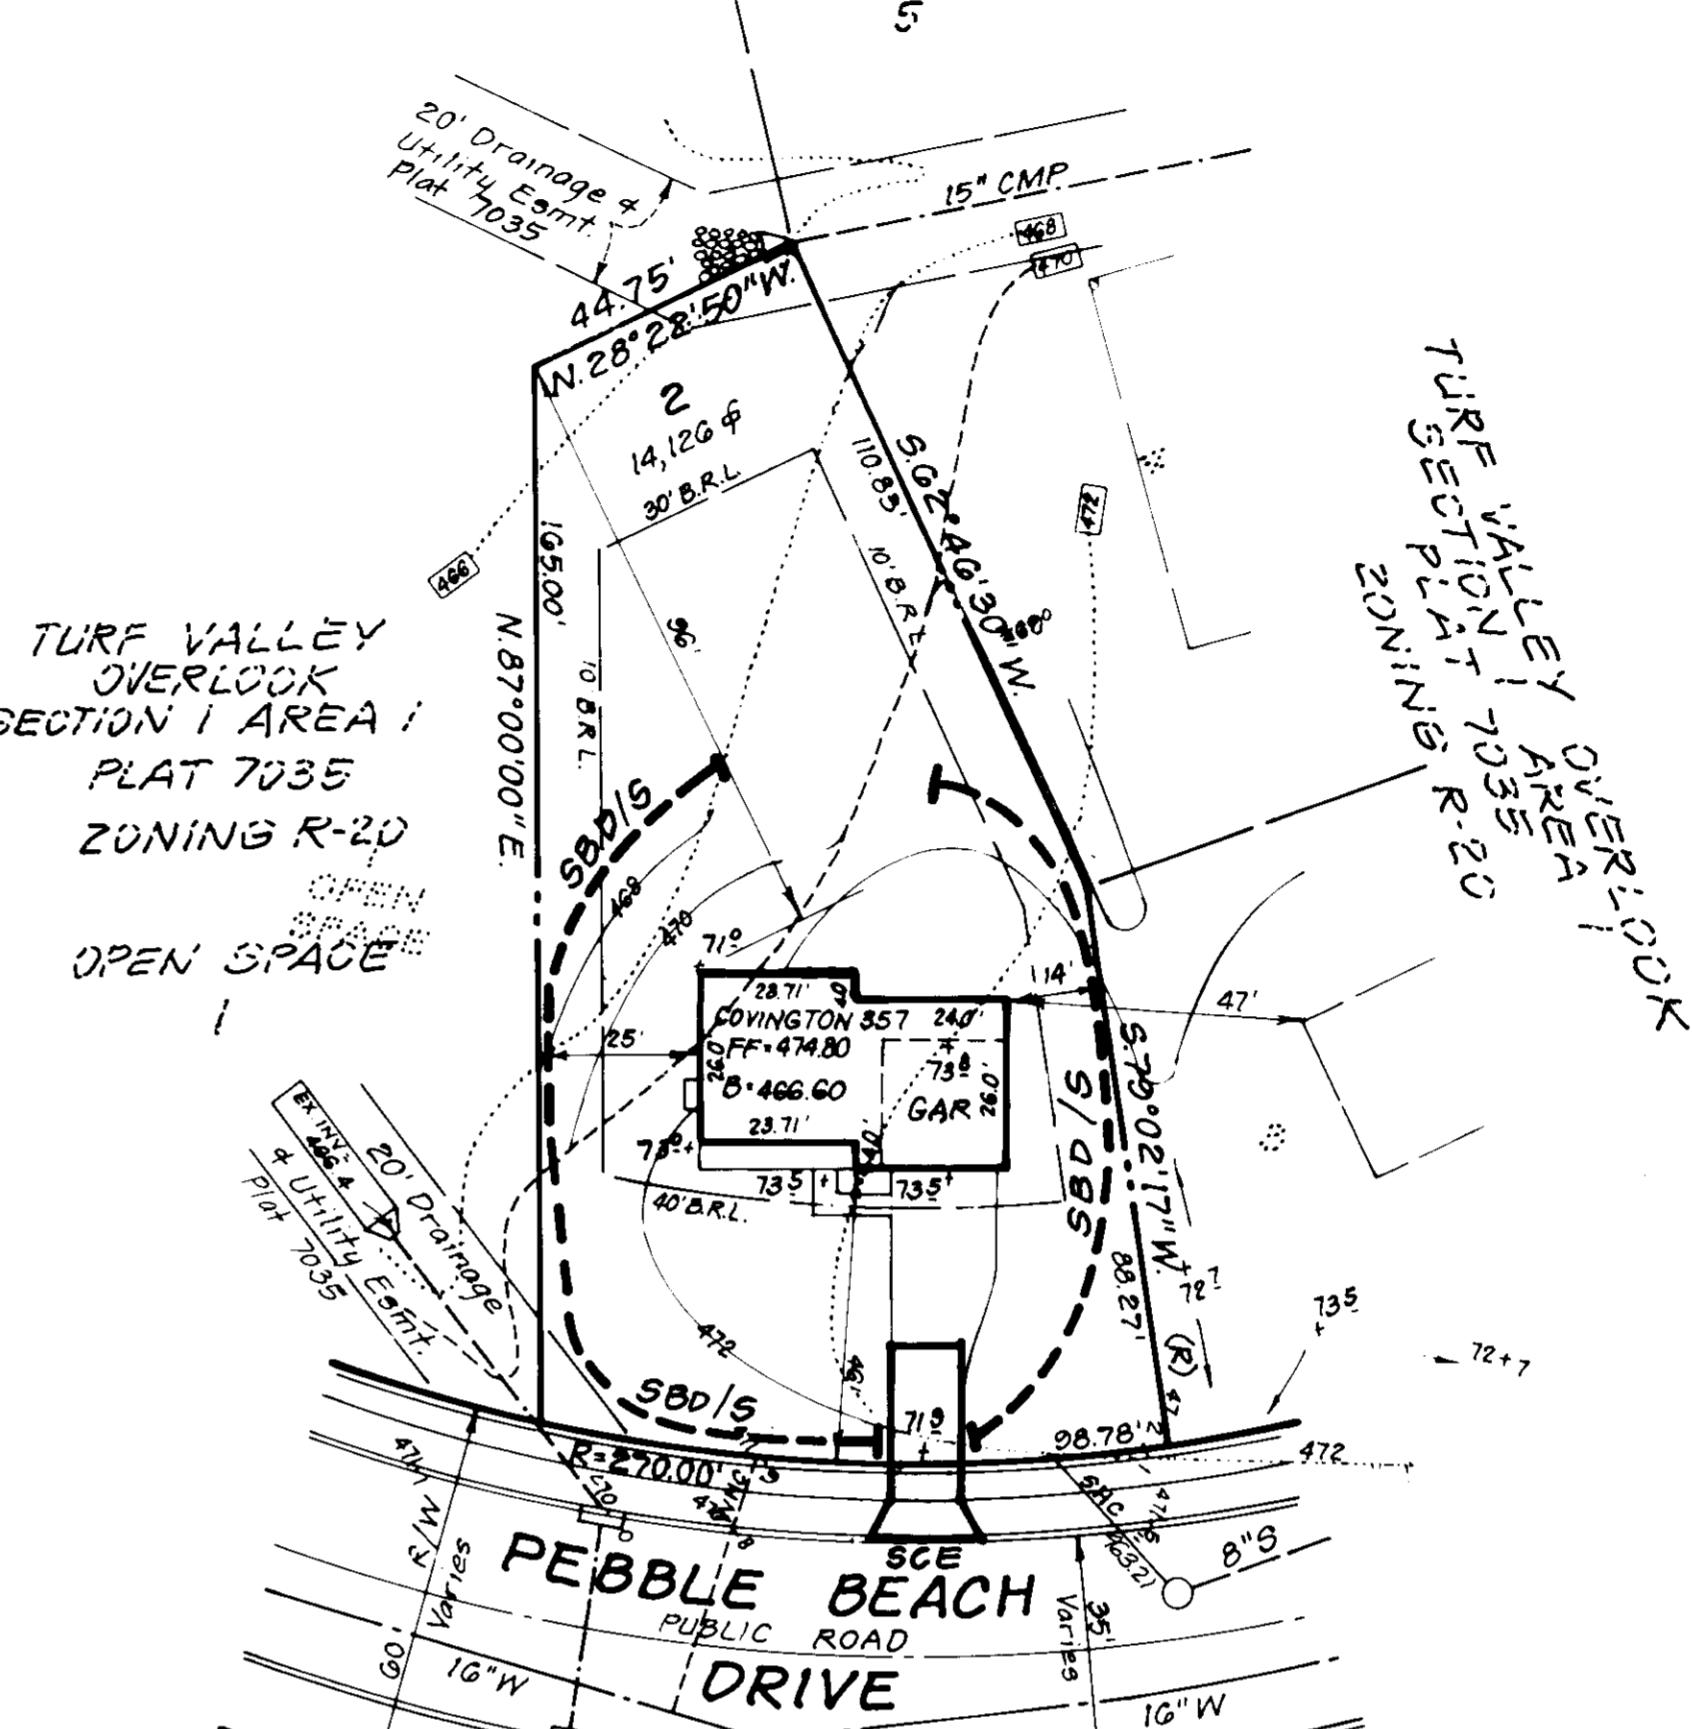

ANCHORING DETAIL

1) Bales shall be placed at the top of a slope or on the contour and in a row with ends tightly abutting the adjacent bale. The soil a min of 4" and placed so the baling are horizontal.
2) Each bale shall be embedded in the soil a min of 4" and placed so the baling are horizontal.
3) Bales shall be anchored in place by either 2 stakes or re-bars driven thru the bale.
4) The bales in each row shall be driven toward the previously laid bale at an angle to force the bales together. Stake or re-bar shall be driven flush with the bale.
5) Bales shall be cleaned and repair/replacement shall be made promptly as needed.

CONSTRUCTION SEQUENCE

- Obtain Grading Permit & install S&E Control Devices & stabilize. 10 DAYS.
- Excavate for foundations and Rough Grade & temporarily stabilize. DAYS.
- Construct structure, sidewalk and driveway. DAYS.
- Final grade and stabilize in accordance with Stds. and Specs. 20 DAYS.
- Upon approval of the sediment control inspector, remove sediment & erosion controls and stabilize. 10 DAYS.

DRIVEWAY ABUTTING STD. 7" COMB. CURB & GUTTER

NOSC-5

CONSTRUCTION SPECIFICATIONS

1. Stone size - Use 2" stone, or reclaimed or recycled concrete equivalent.

2. Required, not less than 50 feet except on a single residence, or where a 30 foot minimum length would apply.

3. Thinner stones - Not less than six (6) inches.

4. Width: Ten (10) feet minimum, but not less than the full width of pants.

5. Filter Cloth: Will be placed over the entire area prior to placing of stone.

6. Surface Water - All surface water flowing in diverted stormwater entrances shall be piped across the entrance. If piping is impractical, mount the entrance on a concrete base and provide a filter cloth.

7. Maintenance - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way. This may require periodic top dressing with additional stone or concrete and/or sweeping and/or washing down and measures used to trap sediment. All sediment applied, dropped, washed or treated onto public rights of way must be removed immediately.

8. Washing - Wheel's shall be cleaned to remove sediment prior to entrance onto a public right of way. When washing is required, it shall be done on an area stabilized with stone and which drains into an approved sediment trapping device.

9. Periodic inspection and needed maintenance shall be provided after each rain.

10. The cost of maintenance shall be borne by the property owner.

11. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

12. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

13. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

14. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

15. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

16. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

17. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

18. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

19. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

20. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

21. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

22. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

23. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

24. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

25. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

26. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

27. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

28. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

29. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

30. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

31. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

32. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

33. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

34. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

35. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

36. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

37. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

38. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

39. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.

40. The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights of way.
