HOWARD COUNTY, MARYLAND

DEPARTMENT OF PUBLIC WORKS

CAPITAL PROJECT NO. D-1069
CONTRACT NO. 136

REVIEWED FOR HOWARD S.C.D.
AND MEETS TECHNICAL REQUIREMENTS

U.S. SOIL CONSERVATION SERVICE DATE

THIS DEVELOPMENT PLAN IS APPROVED FOR SOIL EROSION AND SEDIMENT CONTROL BY THE HOWARD COUNTY SOIL CONSERVATION DISTRICT.

HOWARD S.C.D. DATE

ENGINEER'S CERTIFICATION

I CERTIFY THAT THIS PLAN FOR EROSION AND SEDIMENT CONTROL REPRESENTS A PRACTICAL AND WORKABLE PLAN BASED ON MY PERSONAL KNOWLEDGE OF THE SITE CONDITIONS AND THAT IT WAS PREPARED IN ACCORDANCE WITH THE REQUIREMENTS OF THE HOWARD SOIL CONSERVATION DISTRICT.

Donald E. Hicks Jan. 28, 1987

DONALD E. HICKS, P.E. DATE
HICKS ENGINEERING COMPANY, INC.
200 EAST JOPPA ROAD - SUITE 402
TOWSON, MD 21204

DEVELOPER'S CERTIFICATION

I/ WE CERTIFY THAT ALL DEVELOPMENT AND CONSTRUCTION WILL BE DONE ACCORDING TO THIS PLAN, AND THAT ANY RESPONSIBLE PERSONNEL INVOLVED IN THE CONSTRUCTION PROJECT WILL HAVE A CERTIFICATE OF ATTENDANCE AT A DEPARTMENT OF NATURAL RESOURCES APPROVED TRAINING PROGRAM FOR THE CONTROL OF SEDIMENT AND EROSION BEFORE BEGINNING THE PROJECT. I ALSO AUTHORIZE PERIODIC ON-SITE INSPECTION BY THE HOWARD SOIL CONSERVATION DISTRICT.

SCALE AS SHOWN

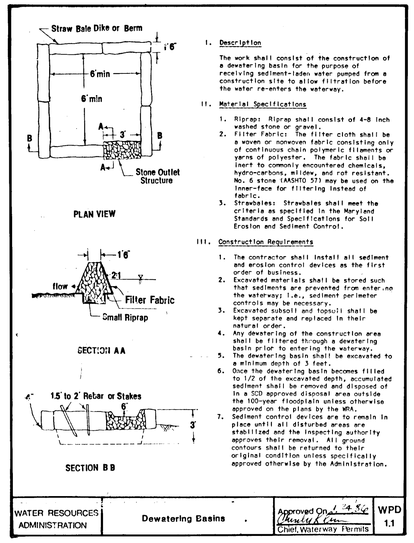
SHEET 2 OF 8

MARCH 16, 1987

8956
OZALID



I. Description

The work shall consist of the construction of a dewatering basin for the purpose of receiving sediment-laden water pumped from a construction site to allow filtration before the water re-enters the waterway.

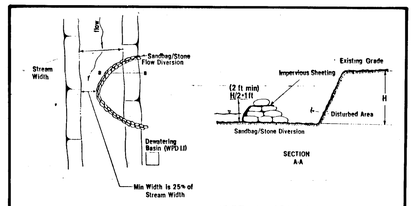
II. Material Specifications

1. Riprap: Riprap shall consist of 4-8 inch washed stone or gravel.
2. Filter Fabric: The filter cloth shall be a woven or nonwoven fabric consisting only of continuous chain polymeric filaments or yarns of polyester. The fabric shall be inert to commonly encountered chemicals, hydrocarbons, mildew, and rot resistant. No. 6 stone (AASHTO 57) may be used on the inner-face for filtering instead of fabric.
3. Strawbales: Strawbales shall meet the criteria as specified in the Maryland Standards and Specifications for Soil Erosion and Sediment Control.

III. Construction Requirements

1. The contractor shall install all sediment and erosion control devices as the first order of business.
2. Excavated materials shall be stored such that sediments are prevented from entering the waterway; i.e., sediment perimeter controls may be necessary.
3. Excavated subsoil and topsoil shall be kept separate and replaced in their natural order.
4. Any dewatering of the construction area shall be filtered through a dewatering basin prior to entering the waterway.
5. The dewatering basin shall be excavated to a minimum depth of 3 feet.
6. Once the dewatering basin becomes filled to 1/2 of the excavated depth, accumulated sediment shall be removed and disposed of in a SCD approved disposal area outside the 100-year floodplain unless otherwise approved on the plans by the MBA.
7. Sediment control devices are to remain in place until all disturbed areas are stabilized and the inspecting authority approves their removal. All ground contours shall be returned to their original condition unless specifically approved otherwise by the Administration.

WATER RESOURCES ADMINISTRATION	Dewatering Basins	Approved On 1-24-84 Chief, Waterway Permits	WPD 1.1



I. Description

The work shall consist of installing flow diversions for the purpose of erosion control when construction activities take place within the stream channel such as bank stabilization or bridge abutment construction.

II. Material Specifications

1. Sandbags: Sandbags shall consist of materials which are resistant to ultraviolet radiation, tearing and puncture and woven tightly enough to prevent leakage of fill material (i.e., sand, fine gravel, etc.).
2. Stone: Stone shall be washed and have a minimum diameter of 6 inches.
3. Sheetings: Sheeting shall consist of polyethylene or other material which is impervious and resistant to puncture and tearing.

III. Construction Requirements

1. All erosion and sediment control devices shall be installed as the first order of work.
2. The diversion structure shall be installed from upstream to downstream.
3. The height of the diversion structure shall be one half the distance from stream bed to stream bank plus one foot, as indicated on the cross-section view.
4. All excavated materials shall be disposed of in a SCD approved disposal area outside the 100-year floodplain unless otherwise approved on the plans by the MBA.
5. All dewatering of the construction area shall be pumped to a dewatering basin prior to re-entering the stream.
6. Sheeting shall be overlapped such that the upstream portion covers the downstream portion with at least an 18-inch overlap.
7. Sediment control devices are to remain in place until all disturbed areas are stabilized in accordance with an approved sediment and erosion control plan and the inspecting authority approves their removal.

WATER RESOURCES ADMINISTRATION	Sandbag/Stone Diversion	Approved On 1/24/84 Chief, Waterway Permits	WPD 2.3

SEDIMENT CONTROL NOTES

1) A minimum of 24 hours notice must be given to the Howard County Office of Inspection and Permits prior to the start of any construction. (992-2437)

2) All vegetative and structural practices are to be installed according to the provisions of this plan and are to be in conformance with the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.

3) Following initial soil disturbance or redisturbance, permanent or temporary stabilization shall be completed within: a) 7 calendar days for all perimeter sediment control structures, dikes, perimeter slopes and all slopes greater than 3:1, b) 14 days as to all other disturbed or graded areas on the project site.

4) All sediment traps/basins shown must be fenced and warning signs posted around their perimeter in accordance with Vol. 1, Chaper 12, of the HOWARD COUNTY DESIGN MANUAL, Storm Drainage.

5) All disturbed areas must be stabilized within the time period specified above in accordance with the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for permanent seedings (Sec. 51) sod (Sec. 54), temporary seeding (Sec. 50) and mulching (Sec. 52.) Temporary stabilization with mulch alone can only be done when recommended seeding dates do not allow for proper germination and establishment of grasses.

6) All sediment control structures are to remain in place and are to be maintained in operative condition until permission for their removal has been obtained from the Howard County Sediment Control Inspector

7) Site Analysis:

Total Area of Site	0.71 Acres
Area Disturbed	0.58 Acres
Area to be roofed or paved	0.23 Acres
Area to be vegetatively stabilized	0.35 Acres
Total Cut	— Cu. yds
Total Fill	— Cu. yds
Offsite waste/borrow area location	TO BE DETERMINED

8) Any sediment control practice which is disturbed by grading activity for placement of utilities must be repaired on the same day of disturbance.

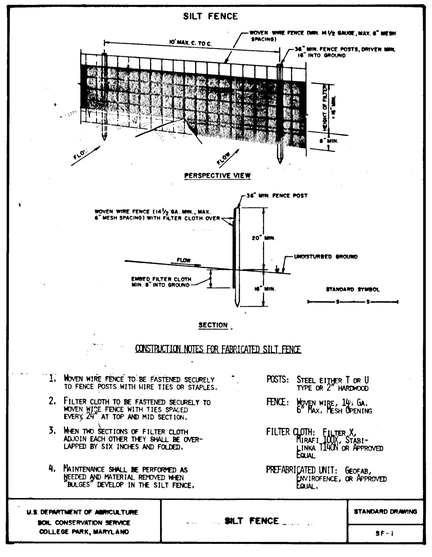
9) Additional sediment controls must be provided, if deemed necessary by the Howard County DPW sediment control inspector.

10) On all sites with disturbed areas in excess of 2 acres, approval of the inspection agency shall be requested upon completion of installation of perimeter erosion and sediment controls, but before proceeding with any other earth disturbance or grading. Other building or grading inspection approvals may not be authorized until this initial approval by the inspection agency is made.

GENERAL NOTES

1. THE CONTRACTOR SHALL NOTIFY "MISS UTILITY" AT 1-800-257-7777 FOR UNDERGROUND UTILITY LOCATIONS, AT LEAST FIVE DAYS PRIOR TO COMMENCING WORK SHOWN ON THE PLANS.
2. ALL TOP ELEVATIONS FOR THE PROPOSED INLETS AND MANHOLES ARE APPROXIMATE, AND ARE TO BE VERIFIED IN THE FIELD BY THE CONTRACTOR AND THE ENGINEER.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE RESTORATION OF ALL EXISTING DRIVEWAYS DAMAGED DURING CONSTRUCTION. SEE MEASUREMENT AND PAYMENT IN SPECIAL PROVISIONS. EXISTING BITUMINOUS CONCRETE DRIVEWAYS SHALL BE RESTORED AS FOLLOWS :
   1.) 4-INCH DEPTH OF BITUMINOUS CONCRETE BASE COURSE
   2.) 1-INCH DEPTH OF BITUMINOUS CONCRETE SURFACE COURSE
4. TREES ARE TO BE PROTECTED FROM DAMAGE TO MAXIMUM EXTENT POSSIBLE. TREES LOCATED WITHIN THE CONSTRUCTION STRIP ARE NOT TO BE REMOVED OR DAMAGED BY THE CONTRACTOR. CONSTRUCTION STRIP SHOWN THUSLY : ▨
5. CONTRACTOR TO GRADE AROUND THE TOP OF THE PROPOSED INLETS IN ORDER TO PROVIDE POSITIVE DRAINAGE TO THE INLETS. LINING SHALL BE AS SHOWN ON THE PLANS OR AS DIRECTED BY THE ENGINEER.
6. COORDINATES ARE BASED ON THE MARYLAND STATE GRID AS PROJECTED BY THE HOWARD COUNTY GEODETIC CONTROL STATIONS
7. THE EXISTING UTILITIES AND OBSTRUCTIONS SHOWN ON THE PLANS ARE FROM THE BEST AVAILABLE RECORDS AND SHALL BE VERIFIED BY THE CONTRACTOR TO HIS OWN SATISFACTION BEFORE STARTING CONSTRUCTION. THE HOWARD COUNTY DEPARTMENT OF PUBLIC WORKS DOES NOT GUARANTEE THE COMPLETENESS OR CORRECTNESS OF THIS INFORMATION.
8. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO PROTECT EXISTING UTILITIES. ANY DAMAGE DUE TO THE CONTRACTOR'S NEGLIGENCE SHALL BE REPAIRED IMMEDIATELY AT THE CONTRACTOR'S EXPENSE. ALL UTILITIES SHALL BE CLEARED BY A MINIMUM OF 12-INCHES.
9. TEST PITS SHALL BE DUG AT ALL UTILITY CROSSINGS TO DETERMINE EXISTING HORIZONTAL AND VERTICAL ALIGNMENT OF UTILITIES. TEST PITS SHALL BE DUG A SUFFICIENT AMOUNT OF TIME IN ADVANCE OF THE CONSTRUCTION OR TRENCHING OPERATION, IN ORDER TO ALLOW FOR NECESSARY ADJUSTMENTS.
10. WHERE TEST PITS HAVE BEEN MADE ON EXISTING UTILITIES, THEY ARE NOTED BY THE SYMBOL ■. THE RESULTS OF TEST PITS ARE INCLUDED ON THE STORM DRAIN PROFILES. HOWARD COUNTY DEPARTMENT OF PUBLIC WORKS DOES NOT GUARANTEE THE COMPLETENESS OR CORRECTNESS OF THIS INFORMATION.
11. ALL UTILITY POLES MUST BE CLEARED BY 2-FEET, OR THE PROPOSED STORM DRAIN SHALL BE PLACED BY TUNNELING. ALL COSTS FOR TUNNELING ARE TO BE INCLUDED IN THE UNIT PRICE BID FOR FURNISHING AND LAYING THE STORM DRAIN PIPE.
12. ALL VERTICAL CONTROLS ARE BASED ON U.S.G.S. DATUM OF 1929.
13. ALL PIPE ELEVATIONS SHOWN ARE INVERT ① ELEVATIONS.
14. CONTRACTOR SHALL REMOVE TREES, STUMPS AND ROOTS ALONG THE LINE OF EXCAVATION AS DIRECTED BY THE ENGINEER. PAYMENT FOR SUCH REMOVAL SHALL BE INCLUDED IN THE UNIT PRICE BID FOR FURNISHING AND LAYING STORM DRAIN PIPE.
15. FOR DETAILS NOT SHOWN ON THE DRAWINGS, AND FOR MATERIALS AND CONSTRUCTION METHODS, THE CONTRACTOR SHALL ABIDE BY THE HOWARD COUNTY DESIGN MANUAL, VOLUME IV, "STANDARD SPECIFICATIONS AND DETAILS FOR CONSTRUCTION" AND THE SPECIAL PROVISIONS.
16. THE CONTRACTOR SHALL NOTIFY THE FOLLOWING UTILITIES OR AGENCIES AT LEAST FIVE (5) DAYS BEFORE STARTING WORK SHOWN HEREON :

BALTIMORE GAS & ELECTRIC CO., UNDERGROUND ELECTRIC DISTRIBUTION ENGINEERING DAMAGE CONTROL	234-5691
BALTIMORE GAS & ELECTRIC CO., UNDERGROUND GAS DISTRIBUTION ENGINEERING	234-5533
CHESAPEAKE AND POTOMAC TELEPHONE CO.	725-9976
COLONIAL PIPELINE COMPANY	781-4641
HOWARD COUNTY BUREAU OF UTILITIES	992-2366
CONSTRUCTION INSPECTION / SURVEYS DIVISION	992-2417



CONSTRUCTION NOTES FOR FABRICATED SILT FENCE

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES.
2. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVERLAPPED BY SIX INCHES AND FOLDED.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

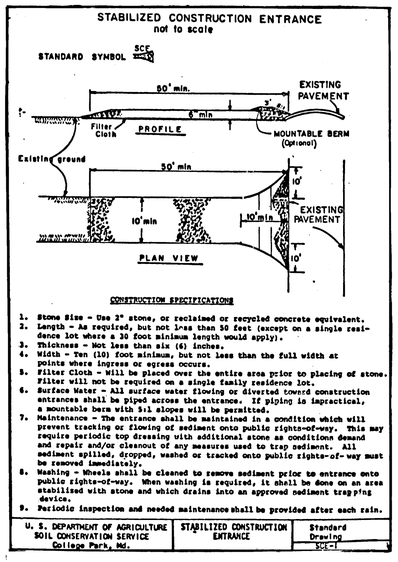
POSTS: STEEL EITHER T OR U TYPE OR 2" HARDWOOD

FENCE: WOVEN WIRE, 14½ GA. 6" MAX. MESH OPENING

FILTER CLOTH: FILTER X, MIRAFI 100X, STABILINKA T140N OR APPROVED EQUAL

PREFABRICATED UNIT: GEOFAB, ENVIROFENCE, OR APPROVED EQUAL.

U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE COLLEGE PARK, MARYLAND	SILT FENCE	STANDARD DRAWING SF-1



CONSTRUCTION SPECIFICATIONS

1. Stone Size - Use 2" stone, or reclaimed or recycled concrete equivalent.
2. Length - As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum length would apply).
3. Thickness - Not less than six (6) inches.
4. Width - Ten (10) foot minimum, but not less than the full width at points where ingress or egress occurs.
5. Filter Cloth - Will be placed over the entire area prior to placing of stone. Filter will not be required on a single family residence lot.
6. Surface Water - All surface water flowing or diverted toward construction entrances shall be piped across the entrance. If piping is impractical, a mountable berm with 5:1 slopes will be permitted.
7. Maintenance - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of-way. This may require periodic top dressing with additional stone as conditions demand and repair and/or cleanout of any measures used to trap sediment. All sediment spilled, dropped, washed or tracked onto public rights-of-way must be removed immediately.
8. Washing - Wheels shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with stone and which drains into an approved sediment trapping device.
9. Periodic inspection and needed maintenance shall be provided after each rain.

U. S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE College Park, Md.	STABILIZED CONSTRUCTION ENTRANCE	Standard Drawing SCE-1

PERMANENT SEEDING NOTES

Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.

Soil Amendments: In lieu of soil test recommendations, use one of the following schedules:

1) Preferred - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 square ft) and 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil. At time of seeding, apply 400 lbs per acre 30-0-0 ureaform fertilizer (9 lbs/1000 sq ft).
2) Acceptable - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 sq ft) and 1000 lbs per acre 10-10-10 fertilizer (23 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil.

Seeding - For the periods March 1 thru April 30, and August 1 thru October 15, seed with 60 lbs per acre (1.4 lbs/1000 sq ft) of Kentucky 31 Tall Fescue. For the period May 1 thru July 31, seed with 60 lbs Kentucky 31 Tall Fescue per acre and 2 lbs per acre (.05 lbs/1000 sq ft) of weeping lovegrass. During the period of October 16 thru February 28, protect site by: Option (1) 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring. Option (2) Use sod. Option (3) Seed with 60 lbs/acre Kentucky 31 Tall Fescue and mulch with 2 tons/acre well anchored straw.

Mulching - Apply 1½ to 2 tons per acre (70 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq ft) for anchoring.

Maintenance - Inspect all seeded areas and make needed repairs, replacements and reseedings.

TEMPORARY SEEDING NOTES

Apply to graded or cleared areas likely to be redisturbed where a short-term vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.

Soil Amendments: Apply 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft)

Seeding: For periods March 1 thru April 30 and from August 15 thru November 15, seed with 2½ bushel per acre of annual rye (3.2 lbs/1000 sq ft). For the period May 1 thru August 14, seed with 3 lbs per acre of weeping lovegrass (.07 lbs/1000 sq ft). For ther period November 16 thru February 28, protect site by applying 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring, or use sod.

Mulching: Apply 1½ to 2 tons per acre 470 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gal per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes, 8 ft or higher, use 348 gal per acre (8 gal/1000 sq ft) for anchoring.

Refer to the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for rate and methods not covered.

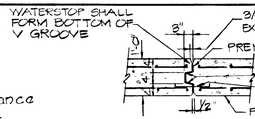
GENERAL NOTES

1. CONCRETE:
   a. All concrete, both plain and reinforced, shall be in accordance with the latest Howard Co. Stand. Specs. for Construction.
   b. All structural concrete shall develop a minimum ultimate compressive strength of 4,000 p.s.i. at the end of 28 days.
   c. Reinforcing bars shall conform to A.S.T.M. A-615, Grade 40
   d. Reinforcing steel shall be lapped a minimum of 24 bar diameters when spliced.
   e. Chamfer corners of all exposed concrete ¾"x¾" unless otherwise noted.
2. STEEL:
   a. Structural Plate for the 11'-6"x7'-3" and 9'-6"x6'-5" S.P.P.A. shall be No. 10 Gauge galvanized steel with 6"x2" corrugations.
   b. Bolts and Nuts shall be ¾" diameter conforming to A.S.T.M. A-449, galvanized according to A.S.T.M. A-153. Bolts shall be spaced such that at least 4 bolts per foot of longitudinal seam are provided.
   c. Anchor bolts shall be ¾" diameter conforming to A.S.T.M. A-307 (with nuts conforming to A.S.T.M. A-563, Grade C) spaced no greater than 18"c, and galvanized to conform to A.S.T.M. A153.
3. SPECIFICATIONS:
   a. A.S.S.H.T.O. Standard Specifications for Highway Bridges, dated 1983, and Interim Specifications; Howard County Standard Specifications for Construction, dated 1984, and Interim Specifications.
4. No Construction equipment shall be permitted to pass over the culvert until a minimum of three feet of compacted fill has been placed over the culvert



NOT FOR JOINT IN WINGWALLS

Chamfer for exp. jt. and V Groove for constr. jt. if any) shall be continuous starting at top of footing for free face, and shall be extended across top of wall and down to 6" min. below ground for outside wall.

GENERAL NOTES

1. Warning lights shall be used to mark channelizing devices at night, as needed.
2. Channelizing devices are to be extended to a point where they are visible to approaching traffic.

KEY

- CHANNELIZING DEVICES (Barriers)
- SIGN SUPPORT / FACE OF SIGN
- DIRECTION OF VEHICULAR TRAFFIC
- DIRECTION OF STREAM FLOW

SUGGESTED CONSTRUCTION SEQUENCE

THE FOLLOWING SEQUENCE OF CONSTRUCTION HAS BEEN DESIGNED TO ALLOW ONE LANE OF TRAFFIC CROSSING ACCESS DURING THE REMOVAL, IN SEGMENTS, OF THE EXISTING TRIPLE-CELL STRUCTURE AND THE INSTALLATION OF THE PROPOSED TRIPLE-CELL PIPE ARCHES:

STAGE 1:

A. INSTALL SEDIMENT CONTROLS.

B. ERECT A TRAFFIC BARRIER TO PROVIDE ONE LANE OF TRAFFIC.

C. PLACE SANDBAG FLOW DIVERSION.

D. REMOVE UPSTREAM MASONRY HEADWALL.

E. EXCAVATE FOR AND INSTALL THE FIRST SEGMENT OF 2 OF THE PROPOSED TRIPLE-CELL PIPE ARCHES AND CONSTRUCT A SECTION OF THE PROPOSED UPSTREAM HEADWALL.

F. STABILIZE THE STREAMBED INLET AND EXCAVATED SIDE SLOPES WITH CLASS 2 STONE RIPRAP AND GABION SLOPE PROTECTION, RESPECTIVELY.

STAGE 2:

A. REARRANGE THE SAND BAGS TO RE-DIRECT THE STREAM FLOW THRU THE CENTER CELL OF THE INSTALLED S.P.F. ARCHES.

B. EXCAVATE FOR AND INSTALL THE THIRD CELL OF THE S.P.F. ARCH AND CONSTRUCT THE REMAINING PORTION OF THE UPSTREAM HEADWALL.

C. STABILIZE THE REMAINING SEGMENT OF THE STREAMBED INLET AND SIDE SLOPES WITH CLASS 2 RIPRAP AND GABION SLOPE PROTECTION, RESPECTIVELY.

D. BACKFILL TO GRADE, ADJUST THE TRAFFIC BARRIER, AND PLACE A TEMPORARY ROADWAY ACROSS THE UPSTREAM INSTALLED SEGMENT OF THE TRIPLE CELL STRUCTURE.

STAGE 3:

A. ARRANGE THE UPSTREAM AND DOWNSTREAM SAND BAGS TO DIRECT THE STREAM FLOW THRU A SINGLE CELL OF THE TRIPLE CELL CULVERT.

B. REMOVE THE DOWNSTREAM MASONRY HEADWALL.

C. EXCAVATE FOR AND INSTALL THE REMAINING SEGMENT OF EITHER ONE OR TWO CELLS, AS CONDITIONS PERMIT, OF THE PROPOSED TRIPLE CELL STRUCTURE AND CONSTRUCT A SECTION OF THE HEADWALL.

D. STABILIZE THE STREAMBED INLET AND STREAM SIDE SLOPES WITH RIPRAP AND GABION SLOPE PROTECTION, AS INDICATED ON THE PLANS.

STAGE 4:

A. ADJUST THE UPSTREAM AND DOWNSTREAM SAND BAGS TO DIRECT THE STREAM FLOW THRU THE COMPLETED CELL OF THE TRIPLE CELL CULVERT.

B. REMOVE THE REMAINING PORTION OF THE EXISTING PIPE STRUCTURE.

C. EXCAVATE FOR AND INSTALL THE REMAINING SEGMENT OF THE PROPOSED CULVERTS AND CONSTRUCT THE REMAINING SECTION OF THE HEADWALL.

D. STABILIZE THE STREAMBED INLET AND STREAM SIDE SLOPES WITH RIP-RAP AND GABION SLOPE PROTECTION AS SHOWN ON THE PLANS.

E. COMPLETE BACKFILL TO GRADE.

F. REMOVE THE TRAFFIC BARRIERS.

CONSTRUCT THE REMAINING LENGTH OF THE ROADWAY.

STABILIZE ALL DISTURBED AREAS WITH SOD OR SEED AND MULCH AS INDICATED ON THE PLANS.

REMOVE SEDIMENT CONTROL DEVICES.

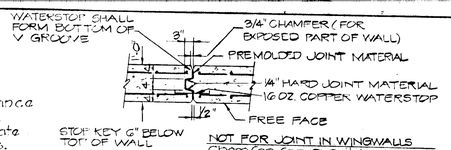
GENERAL NOTES

1. CONCRETE:
   a. All concrete, both plain and reinforced, shall be in accordance with the latest Howard Co. Stand. Specs. for Construction.
   b. All structural concrete shall develop a minimum ultimate compressive strength of 4,000 p.s.i. at the end of 28 days.
   c. Reinforcing bars shall conform to A.S.T.M. A-615, Grade 40
   d. Reinforcing steel shall be lapped a minimum of 24 bar diameters when spliced.
   e. Chamfer corners of all exposed concrete ¾"x¾" unless otherwise noted.
2. STEEL:
   a. Structural Plate for the 11'-6"x7'-3" and 9'-6"x6'-5" S.P.P.A. shall be No. 10 Gauge galvanized steel with 6"x2" corrugations.
   b. Bolts and Nuts shall be ¾" diameter conforming to A.S.T.M. A-449, galvanized according to A.S.T.M. A-153. Bolts shall be spaced such that at least 4 bolts per foot of longitudinal seam are provided.
   c. Anchor bolts shall be ¾" diameter conforming to A.S.T.M. A-307 (with nuts conforming to A.S.T.M. A-563, Grade C.) spaced no greater than 18"c, and galvanized to conform to A.S.T.M. A-153.
3. SPECIFICATIONS:
   a. A.S.S.H.T.O. Standard Specifications for Highway Bridges, dated 1983, and Interim Specifications; Howard County Standard Specifications for Construction, dated 1984, and Interim Specifications.
4. No Construction equipment shall be permitted to pass over the culvert until a minimum of three feet of compacted fill has been placed over the culvert



NOT FOR JOINT IN WINGWALLS

Chamfer, for exp. jt. and V groove for constr. jt. - if any) shall be continuous starting at top of footing for free face, and shall be extended across top of wall and down to 6" min. below ground for outside wall.

SUGGESTED CONSTRUCTION SEQUENCE

THE FOLLOWING SEQUENCE OF CONSTRUCTION HAS BEEN DESIGNED TO ALLOW ONE LANE OF TRAFFIC CROSSING ACCESS DURING THE REMOVAL, IN SEGMENTS, OF THE EXISTING TRIPLE-CELL STRUCTURE AND THE INSTALLATION OF THE PROPOSED TRIPLE-CELL PIPE ARCHES:

STAGE 1:

A. INSTALL SEDIMENT CONTROLS.

B. ERECT A TRAFFIC BARRIER TO PROVIDE ONE LANE OF TRAFFIC.

C. PLACE SANDBAG FLOW DIVERSION.

D. REMOVE UPSTREAM MASONRY HEADWALL.

E. EXCAVATE FOR AND INSTALL THE FIRST SEGMENT OF 2 OF THE PROPOSED TRIPLE-CELL PIPE ARCHES AND CONSTRUCT A SECTION OF THE PROPOSED UPSTREAM HEADWALL.

F. STABILIZE THE STREAMBED INLET AND EXCAVATED SIDE SLOPES WITH CLASS 2 STONE RIPRAP AND GABION SLOPE PROTECTION, RESPECTIVELY.

STAGE 2:

A. REARRANGE THE SAND BAGS TO RE-DIRECT THE STREAM FLOW THRU THE CENTER CELL OF THE INSTALLED S.P.P. ARCHES.

B. EXCAVATE FOR AND INSTALL THE THIRD CELL OF THE S.P.P. ARCH AND CONSTRUCT THE REMAINING PORTION OF THE UPSTREAM HEADWALL.

C. STABILIZE THE REMAINING SEGMENT OF THE STREAMBED INLET AND SIDE SLOPES WITH CLASS 2 RIPRAP AND GABION SLOPE PROTECTION, RESPECTIVELY.

D. BACKFILL TO GRADE, ADJUST THE TRAFFIC BARRIER, AND PLACE A TEMPORARY ROADWAY ACROSS THE UPSTREAM INSTALLED SEGMENT OF THE TRIPLE CELL STRUCTURE.

STAGE 3:

A. ARRANGE THE UPSTREAM AND DOWNSTREAM SAND BAGS TO DIRECT THE STREAM FLOW THRU A SINGLE CELL OF THE TRIPLE CELL CULVERT.

B. REMOVE THE DOWNSTREAM MASONRY HEADWALL.

C. EXCAVATE FOR AND INSTALL THE REMAINING SEGMENT OF EITHER ONE OR TWO CELLS, AS CONDITIONS PERMIT, OF THE PROPOSED TRIPLE CELL STRUCTURE AND CONSTRUCT A SECTION OF THE HEADWALL.

D. STABILIZE THE STREAMBED INLET AND STREAM SIDE SLOPES WITH RIPRAP AND GABION SLOPE PROTECTION, AS INDICATED ON THE PLANS.

STAGE 4:

A. ADJUST THE UPSTREAM AND DOWNSTREAM SAND BAGS TO DIRECT THE STREAM FLOW THRU THE COMPLETED CELL OF THE TRIPLE CELL CULVERT.

B. REMOVE THE REMAINING PORTION OF THE EXISTING PIPE STRUCTURE.

C. EXCAVATE FOR AND INSTALL THE REMAINING SEGMENT OF THE PROPOSED CULVERTS AND CONSTRUCT THE REMAINING SECTION OF THE HEADWALL.

D. STABILIZE THE STREAMBED INLET AND STREAM SIDE SLOPES WITH RIP-RAP AND GABION SLOPE PROTECTION AS SHOWN ON THE PLANS.

E. COMPLETE BACKFILL TO GRADE.

F. REMOVE THE TRAFFIC BARRIERS.

CONSTRUCT THE REMAINING LENGTH OF THE ROADWAY.

STABILIZE ALL DISTURBED AREAS WITH SOD OR SEED AND MULCH AS INDICATED ON THE PLANS.

REMOVE SEDIMENT CONTROL DEVICES.

GENERAL NOTES

1. *Warning lights shall be used to mark channelizing devices at night, as needed.*
2. *Channelizing devices are to be extended to a point where they are visible to approaching traffic.*

KEY

- CHANNELIZING DEVICES (Barriers)
- SIGN SUPPORT / FACE OF SIGN
- DIRECTION OF VEHICULAR TRAFFIC
- DIRECTION OF STREAM FLOW
