SEQUENCE OF CONSTRUCTION

1. Construction of the entire length of road including provision of the sediment and erosion control measures shall be divided into various segments. Each segment being defined by the limits of surface runoff draining into the specific road culvert.
2. The culvert discharging clean surface runoff (including other stormdrain systems connecting to the culvert pipe) shall be constructed first, prior to any road grading activity within that segment.
3. Install all inlet sediment traps and stone outlet sediment traps for each segment as shown and detailed on the plan.
4. Complete all remaining sediment control measures as shown.
5. Grade all roads to subgrade along with all proposed ditches.
6. Pave roadway.
7. Stabilize drainage ditches by seeding or sodding as indicated on the plans.
8. Vegetatively stabilize all other areas which are not paved.
9. Remove all sediment control facilities ties (with inspector's approval) and stabilize the affected areas.
