GENERAL NOTES

A. GENERAL

1. ALL CONSTRUCTION AND MATERIALS MUST BE IN ACCORDANCE TO THE MARYLAND DEPARTMENT OF TRANSPORTATION, STATE HIGHWAY ADMINISTRATION "STANDARD SPECIFICATIONS FOR CONSTRUCTION MATERIALS".
2. ALL CONSTRUCTION SHALL ALSO BE IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF HOWARD COUNTY DESIGN MANUAL III, VOLUME IV AND OTHER APPLICABLE STANDARDS AND SPECIFICATIONS.

B. LOADS FOR PREFABRICATED BRIDGES

BRIDGE DESIGN MUST BE BASED ON COMBINATION OF FOLLOWING LOADS WHICH WILL PRODUCE MAXIMUM CRITICAL MEMBER STRESSES. (SEE BRIDGE REACTION TABLES GIVEN ON SHEETS 21, 22, 23, 24.

LIVE LOAD	-------	85 PSF
VEHICULAR LOAD	-------	10,000 LBS (NO IMPACT)
WIND LOAD	-------	75 PSF
TOP CHORD LOAD	-------	300 PLF (AASHTO 10.8.1)
		400 PLF (AASHTO 3.15.1.1.2)
STREAM LOAD VELOCITY	----	11 FT/SEC.

C. CAISSONS

1. CAISSONS ARE GIVEN AS AN OPTION TO THE CONTRACTOR. CONTRACTOR MAY OPT FOR A DIFFERENT TYPE OF DEEP FOUNDATION. THE CONTRACTOR'S OPTION MUST BE SUBMITTED FOR APPROVAL BY THE ENGINEER OF RECORD.
2. CAPACITY UTILIZED FOR DRILLED CAISSONS BEARING ON ROCK IS 5 KSF PLUS SKIN FRICTION OF 1 KSF.
3. BOTTOM OF CAISSON ELEVATIONS ON DRAWINGS ARE FOR ESTIMATION PURPOSES ONLY, AND MAY NEED TO BE ALTERED TO ACHIEVE ADEQUATE BEARING. CAISSONS SHALL BE DRILLED WITHOUT DISTURBING SURROUNDING SOIL. EXCAVATION SHALL BE KEPT FREE FROM WATER. CAISSON SHAFT SIZES SHALL BE IN STRICT ACCORDANCE WITH THE PROJECT DOCUMENTS.
4. CAISSONS SHALL BE INSPECTED UNDER THE SUPERVISION OF A REGISTERED PROFESSIONAL ENGINEER PRIOR TO REMOVING CASING. CAISSONS SHALL BE CONCRETED FULL HEIGHT IMMEDIATELY SUBSEQUENT TO INSPECTION AND APPROVAL. CAISSON CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THE GEOTECHNICAL REPORT AND THE PROJECT.

D. SHOP DRAWINGS

1. THE GENERAL CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR ALL STRUCTURAL ELEMENTS SHOWN ON THE CONTRACT DOCUMENTS FOR APPROVAL. THE GENERAL CONTRACTOR SHALL STATE ON THE SHOP DRAWINGS THAT CONTRACT DOCUMENT REQUIREMENTS HAVE BEEN MET AND THAT ALL DIMENSIONS, CONDITIONS AND QUANTITIES HAVE BEEN REVIEWED AND VERIFIED AS SHOWN AND ON THE SHOP DRAWINGS.

E. CONCRETE (CAST-IN-PLACE)

1. ALL STRUCTURAL CONCRETE HAS BEEN DESIGNED IN ACCORDANCE WITH THE REQUIREMENTS OF ACI 318-83.
2. CONTRACTOR SHALL SUBMIT MIX DESIGNS ACCOMPANIED BY APPROPRIATE GRAPHS AND BACKGROUND DATA FOR APPROVAL. MIX DESIGN SHALL INDICATE 7 AND 28 DAY STRENGTHS, CEMENT CONTENT, AIR CONTENT, WATER-CEMENT RATIO, AMOUNT OF FINE AND COARSE AGGREGATES, AND ADMIXTURES.
3. MINIMUM ULTIMATE COMPRESSIVE STRENGTH OF CONCRETE AT 28 DAYS SHALL BE AS FOLLOWS:

ABUTMENTS, APRON SLAB	3500 PSI
CAISSONS	3000 PSI
PEA-GRAVEL CONCRETE	2500 PSI
ALL OTHER CONCRETE	3000 PSI

4. ALL CONCRETE SHALL BE AIR-ENTRAINED. SLABS POURED ON GRADE SHALL BE MINIMUM 6 IN. THICK, PLACED OVER 4 IN. OF WASHED GRAVEL UNLESS NOTED OTHERWISE.
5. EXPOSED CONCRETE SHALL HAVE 3/4" CHAMFERED EDGES. ALL CONCRETE WORK, REINFORCING PLACEMENT, FORMWORK AND SHORING SHALL BE INSPECTED UNDER THE SUPERVISION OF A REGISTERED PROFESSIONAL ENGINEER. CONCRETE QUALITY CONTROL, INSPECTION AND TESTING SHALL BE IN STRICT ACCORDANCE WITH THE PROJECT SPECIFICATIONS, AS WELL AS LOCAL BUILDING REQUIREMENTS.
6. USE OF ADDITIVES SHALL NOT BE PERMITTED UNLESS SPECIFICALLY APPROVED BY THE STRUCTURAL ENGINEER. USE OF ADDITIVES CONTAINING CALCIUM CHLORIDE SHALL NOT BE PERMITTED.

F. CONCRETE PROTECTION FOR REINFORCEMENT (CAST-IN-PLACE CONCRETE)

1.

CONCRETE CAST AGAINST AND PERMANENTLY EXPOSED TO EARTH	3 IN.
FORMED CONCRETE EXPOSED TO EARTH OR WEATHER NO 6 BAR OR LARGER	2 IN.

G. REINFORCING STEEL

1. REINFORCING BARS SHALL BE DEFORMED BILLET STEEL CONFORMING TO ASTM A615, GRADE 60. REINFORCING STEEL SHALL BE DETAILED IN ACCORDANCE WITH THE ACI "MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES", LATEST EDITION. ALL REINFORCING BARS SHALL BE EPOXY COATED.

85 PSF PEDESTRIAN LOADING OR LOADED PICKUP TRUCK (5,200 LB VEHICLE WITH 70% OF THE WEIGHT ON THE REAR AXLE) NO IMPACT, WHICH EVER PRODUCES THE MAXIMUM STRESS.

600' SCALE MAP NO. _____ BLOCK NO. _____

HOWARD COUNTY PATHWAY SYSTEM-PHASE 3b, SEGMENT 1
CAPITAL PROJECT N-3954
HOWARD COUNTY, MARYLAND
BID SET SHEET NO. 25

SCALE AS SHOWN

SHEET 16 OF 39

960295S5.DWG

GENERAL NOTES

1. DESIGN/CONSTRUCTION/MATERIAL SPECIFICATIONS:
ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF MD SHA STANDARDS AND SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS INCLUDING ALL SPECIAL PROVISIONS FOR MATERIALS AND CONSTRUCTION. THE DESIGN IS IN ACCORDANCE WITH AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES 16TH EDITION, AND THE AASHTO GUIDE SPECIFICATIONS FOR THE DESIGN OF PEDESTRIAN BRIDGES DATED AUGUST 1997.

2. TIMBER AND STEEL DESIGN: ELASTIC DESIGN, WORKING STRESS DESIGN METHOD.

3. CONCRETE DESIGN: SERVICE DESIGN LOAD, fc = 1400 psi

4. REINFORCING DESIGN: SERVICE DESIGN LOAD, fs = 24,000 psi

5. LIVE LOAD: PEDESTRIAN LIVE LOAD 85 psf, H-5 MAINTENANCE VEHICLE LOAD

6. CONCRETE: ALL CONCRETE FOR ABUTMENT BACKWALLS SHALL BE MIX NO. 3, 3500 psi.

7. REINFORCING STEEL:
REINFORCING STEEL SHALL CONFORM TO ASTM A-615 GRADE 60. SPLICES NOT SHOWN SHALL BE LAPPED AS PER STANDARD BAR LAP CHARTS. MINIMUM COVER FOR ANY BAR SHALL BE 2" UNLESS OTHERWISE NOTED. ONLY GRADE 60, EPOXY COATED REINFORCING STEEL WILL BE PERMITTED ON THIS PROJECT.

8. STRUCTURAL STEEL:
STRUCTURAL STEEL SHALL CONFORM TO ASTM A-709, GRADE 50W OR A-588 WEATHERING STEEL INCLUDING ADDITIONAL REQUIREMENTS FOR CHARPY V-NOTCH TESTING OF AASHTO SPECIFICATION M 223 FOR PRIMARY LOAD CARRYING MEMBERS.

9. STREAM PROTECTION:
DURING THE COURSE OF THE CONSTRUCTION, THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER AS TO PREVENT ANY DAMAGE TO THE STREAM FROM POLLUTION BY DEBRIS, SEDIMENT OR OTHER FOREIGN MATERIAL OR FROM THE MANIPULATION OF EQUIPMENT AND/OR MATERIALS IN OR NEAR THE STREAM. HE SHALL NOT RETURN TO THE STREAM OR TO A DITCH IMMEDIATELY FLOWING INTO THE STREAM ANY WATER WHICH HAS BEEN USED FOR WASH PURPOSES OR SIMILAR OPERATIONS WHICH CAUSE THIS WATER TO BECOME POLLUTED WITH SAND, SILT, CEMENT, OIL OR OTHER IMPURITIES. WASTE WATER SHALL BE FILTERED USING HAY BALES AND GEOTEXTILE FABRIC OR SIMILAR MATERIALS. THE CONTRACTOR SHALL SUBMIT HIS COLLECTION AND FILTERING SYSTEM TO THE RESIDENT ENGINEER FOR APPROVAL PRIOR TO THE BEGINNING OF CONSTRUCTION.

10. PREREQUISITE EXPERIENCE:
CONTRACTOR SHALL HAVE PREVIOUS EXPERIENCE IN THE REPAIR AND REHABILITATION OF STEEL TRUSS SUPERSTRUCTURES. CONTRACTOR SHALL HAVE AN AVID UNDERSTANDING OF TRUSS STRUCTURES AND HAVE EXPERIENCE IN THE ASSEMBLY, TEMPORARY SUPPORT, AND DISASSEMBLY OF STEEL TRUSS STRUCTURES.

11. RECONSTRUCTION NOTES:
THE CONTRACTORS ATTENTION IS DIRECTED TO THE FACT THAT, DUE TO THE NATURE OF RECONSTRUCTION PROJECTS, THE EXACT EXTENT OF RECONSTRUCTION WORK CANNOT ALWAYS BE ACCURATELY DETERMINED PRIOR TO THE COMMENCEMENT OF WORK. THESE CONTRACT DOCUMENTS HAVE BEEN PREPARED BASED ON FIELD INSPECTION INFORMATION AVAILABLE AT THE TIME. ACTUAL FIELD CONDITIONS MAY REQUIRE MODIFICATIONS TO THE CONSTRUCTION DETAILS AND EXTENT OF WORK EFFORTS. THE CONTRACTOR SHALL PERFORM THE WORK IN ACCORDANCE WITH ACTUAL FIELD CONDITIONS.

THE CONTRACTOR SHALL EXAMINE AND VERIFY IN THE FIELD ALL EXISTING CONDITIONS AND DIMENSIONS WITH THOSE SHOWN ON THE PLANS. IF FIELD CONDITIONS OR DIMENSIONS DIFFER FROM THOSE SHOWN ON THE PLANS, THE CONTRACTOR SHALL USE THE FIELD CONDITIONS AND DIMENSIONS AND MAKE THE APPROPRIATE CHANGES TO THE PLANS AT THE APPROVAL OF THE ENGINEER.

DIMENSIONS OF THE EXISTING STRUCTURES SHOWN ON THE PLANS ARE FOR GENERAL REFERENCE ONLY AND HAVE BEEN TAKEN FROM A FIELD INSPECTION. ORIGINAL RECORD PLANS OF THE STRUCTURE ARE UNAVAILABLE. THE CONTRACTOR SHALL TAKE ALL SUCH FIELD MEASUREMENTS AS ARE NECESSARY TO ASSURE PROPER FIT OF THE FINISHED WORK, AND THE CONTRTACTOR SHALL ASSUME FULL RESPONSIBILITY FOR THEIR ACCURACY. WHEN SHOP DRAWINGS ARE SUBMITTED FOR APPROVAL, THE FIELD MEASUREMENTS MADE SHALL BE INDICATED ON THE SHOP DRAWINGS SUBMITTED FOR APPROVAL.

THE CONTRACTOR SHALL BE REQUIRED TO PROTECT HIS WORKERS AT ALL TIMES IN CONFORMANCE WITH APPLICABLE OSHA REGULATIONS.

ALL MATERIAL FALLING ON THE AREA BELOW AND ADJACENT TO THE BRIDGE SHALL BE REMOVED AND DISPOSED OF BY THE CONTRACTOR ON A REGULAR RECURRING BASIS.

DETAILS SHOWN ON THE PLANS INDICATE THE AREAS OF STEEL DETERIORATION NOTED DURING THE FIELD INSPECTION. ALL THE MAJOR AREAS, KNOWN TO EXIST AT THE TIME OF CONTRACT PREPARATION, HAVE BEEN SHOWN TO INDICATE THE APPROXIMATE EXTENT OF DETERIORATION TO BE REPAIRED BY THE CONTRACTOR. IF THE PRESSURE WASH CLEANING OF THE STRUCTURE REVEALS ADDITIONAL AREAS OF DETERIORATION THAT REQUIRE REPAIR, THE CONTRACTOR SHALL SUBMIT A METHOD OF REPAIR TO THE ENGINEER FOR APPROVAL. THE PRICE TO PERFORM THE ADDITIONAL REPAIRS SHALL BE MUTUALLY AGREED UPON BY THE CONTRACTOR AND THE ENGINEER WITH THE APPROPRIATE CONTRACT ADJUSTMENTS BEING MADE PRIOR TO THE WORK BEING (COMPLETED) PERFORMED.

12. STEEL REPAIRS:
ALL STEEL REPAIRS SHALL BE AS SHOWN ON THE PLANS. ANY ADDITIONAL REPAIRS OR LOCATIONS SHALL BE APPROVED BY THE ENGINEER PRIOR TO WORK EFFORTS BY THE CONTRACTOR. FLAME CUTTING OR WELDING OF THE EXISTING STEEL SHALL NOT BE PERMITTED IN THIS PROJECT. MEMBERS OF THE STRUCTURE THAT RESULT OR ARE PROPOSED TO BE REMOVED, STORED, AND REINSTALLED SHALL BE NUMBERED, TAGGED, AND RECORDED TO ENSURE PROPER PLACEMENT UPON REINSTALLATION. THE CONTRACTOR AND THE RESIDENT ENGINEER SHALL KEEP A SIMILAR LOG BOOK CONTAINING THE MEMBERS WITH THE ASSIGNED DESIGNATIONS.

13. RIVET REPLACEMENTS:
THE EXISTING STRUCTURE CONTAINS MANY LOCATIONS WHERE RIVET REPLACEMENTS ARE REQUIRED. THESE LOCATIONS SHALL BE APPROVED BY THE ENGINEER PRIOR TO ANY ATTEMPT OF RIVET REMOVAL BY THE CONTRACTOR. FLAME CUTTING OF THE EXISTING RIVETS WILL NOT BE PERMITTED AS A REMOVAL OPTION. RIVET HEADS SHALL BE SHEAR CUT USING A PNEUMATIC RIVET BREAKER AND DRIVEN OUT WITH A HAND HELD PUNCH. OPTIONAL METHODS OF REMOVAL SHALL BE SUBMITTED FOR APPROVAL BY THE ENGINEER. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS SO AS TO NOT DAMAGE EXISTING STEEL TO REMAIN IN PLACE. IF THE CONTRACTOR'S OPERATIONS DAMAGE ANY EXISTING STEEL, WHICH IS TO REMAIN IN PLACE, THE DAMAGED AREAS SHALL BE REPAIRED AND REPLACED AT NO ADDITIONAL COST TO THE OWNER. THE REPAIRS SHALL BE MADE IN SUCH A MANNER AS TO MATCH THE APPEARANCE OF THE EXISTING STRUCTURE.

14. WELDING NOTES:
ALL FIELD AND SHOP WELDS SHALL CONFORM TO THE PLANS AND AASHTO/AWS BRIDGE WELDING CODE D-1.5. ALL WELDS SHALL BE PERFORMED BY CERTIFIED WELDER APPROVED BY THE OFFICE OF MATERIALS AND RESEARCH.

15. STRUCTURAL LIFTING OPERATIONS:
IN ORDER TO REMOVE AND REPLACE THE EXISTING TRUSS EXPANSION BEARINGS, THE CONTRACTOR SHALL LIFT THE EXISTING STEEL STRUCTURE AT THE DESIGNATED LIFTING POINTS. LIFTING SHALL OCCUR AT BOTH POINTS SIMULTANEOUSLY AND UNIFORMLY. THE JACKING DIFFERENCE BETWEEN THE ADJACENT LIFTING POINTS SHALL NOT EXCEED .125 OF AN INCH. ALL REPAIRS STATED IN THE PLANS, INCLUDING ANY ADDITIONAL REPAIRS DISCOVERED IN THE FIELD, SHALL BE COMPLETED PRIOR TO LIFTING EFFORTS. THE STRUCTURE SHALL BE LIFTED UNDER THE SELFWEIGHT OF THE STEEL TRUSS STRUCTURE.

THE FINAL POSITION OF THE LIFTED STRUCTURAL STEEL MEMBERS SHALL BE DIRECTLY AT THEIR ORIGINAL POSITIONS WITHOUT ANY HORIZONTAL DISPLACEMENT.

ALL DETAILS OF LIFTING PROCEDURES INCLUDING BUT NOT LIMITED TO LIFTING POINT LOCATIONS, CALCULATED LIFTING FORCES, LIFTING EQUIPMENT, SUPPORTING SYSTEMS, TYPES AND GRADES OF MATERIAL, LIFTING HEIGHTS AND THE SCHEMATIC HYDRAULIC LAYOUT SHALL BE DEVELOPED BY A PROFESSIONAL ENGINEER LICENSED IN THE STATE OF MARYLAND AND SUBMITTED TO THE HOWARD COUNTY DEPARTMENT OF PUBLIC WORKS FOR APPROVAL. THE SUBMISSION OF PROPOSED LIFTING PROCEDURES SHALL BE IN ACCORDANCE WITH SPECIAL PROVISION SPECIFICATION, CATEGORY 400, STRUCTURES, STRUCTURAL LIFTING OPERATIONS OF THE SPECIFICATIONS.

THE CONTRACTOR MAY EMPLOY, SUBJECT TO THE APPROVAL OF THE HOWARD COUNTY DEPARTMENT OF PUBLIC WORKS, ANY LIFTING EQUIPMENT AND METHOD, WHICH HE CONSIDERS SUITABLE, PROVIDED THE EXISTING MEMBERS ARE NOT DAMAGED OR OVERSTRESSED AND ARE SAFELY BRACED AT ALL TIMES, AND ARE SUPPORTED ON FIXED SUPPORTS IMMEDIATELY AFTER THEIR ACTUAL LIFTING.

JACKING LOADS AS INDICATED ON SHEET 38 OF 39 ARE FOR EXISTING SUPERSTRUCTURE DEAD LOADS ONLY AND DO NOT INCLUDE THE WEIGHT OF ANY TEMPORARY WALKWAYS, RAILING, DECK SYSTEM, EQUIPMENT OR OTHER DEAD AND LIVE LOADS DUE TO THE CONTRACTOR'S OPERATIONS.

16. PAINTING NOTES:
THE TOP FLANGES OF THE EXISTING STRINGERS, INCLUDING THE VERTICAL EDGES, SHALL BE CLEANED AND PAINTED IN ACCORDANCE WITH GUIDELINES SET FORTH BY THE STEEL STRUCTURES PAINTING COUNCIL (S.S.P.C.). THE TOP FLANGES SHALL BE HAND TOOL CLEANED, (SSPC-SP2), AND POWER TOOL CLEANED,(SSPC-SP3), TO REMOVE ALL LOOSE MILL SCALE, LOOSE RUST, LOOSE PAINT, AND OTHER DETRIMENTAL FOREIGN MATTER. CLEANING IS NOT INTENDED TO REMOVE ADHERENT MILL SCALE, RUST, AND PAINT. MILL SCALE, RUST AND PAINT ARE CONSIDERED ADHERENT IF THEY CANNOT BE REMOVED BY LIFTING WITH A DULL PUTTY KNIFE.

AFTER THE DESIGNATED STEEL SURFACES HAVE BEEN CLEANED TO THE SATISFACTION OF THE ENGINEER, THE SURFACES SHALL BE SOLVENT CLEANED, (SSPC-SP1), TO REMOVE ALL VISIBLE OIL, GREASE, SOIL, DRAWING AND CUTTING COMPOUNDS, AND OTHER SOLUBLE CONTAMINANTS FROM THE STEEL SURFACES. THE SOLVENT CLEANING SHALL BE COMPLETED PRIOR TO THE APPLICATION OF THE PAINT SYSTEM.

THE PAINT COATING SYSTEM SHALL BE A SURFACE TOLERANT, HIGH BUILD, TWO PART, EPOXY PAINT FROM THE APPROVED LIST OF MATERIALS. THE COLOR TO BE SIMILAR TO THAT OF THE NATURAL COLOR OF THE STEEL SUPERSTRUCTURE, (RUST-BROWN).

17. GABION NOTES:
PROPOSED GABION WINGWALLS SHALL BE DESIGNED BY THE CONTRACTOR AND SUBMITTED TO THE ENGINEER FOR APPROVAL. THE GABION WINGWALLS ARE TO BE DESIGNED BASED ON THE EXISTING SITE AND SOIL CONDITIONS. IT IS THE CONTRACTOR'S RESPONSIBLILITY TO COLLECT THIS INFORMATION TO DEVELOP THE RETAINING WALL DESIGN(S). THE DIMENSIONS GIVEN IN THE PLANS ARE FOR ESTIMATING PURPOSES ONLY AND ARE NOT REPRESENTATIVE OF ANY DESIGN. THE STONE USED TO FILL THE GABION BASKETS SHALL BE OF A SIMILAR COLOR TO THAT OF THE EXISTING GRANITE BLOCK GRAVITY ABUTMENTS AND ARE TO BE APPROVED BY THE ENGINEER PRIOR TO PLACEMENT.

18. TIMBER DECK/RAILING SYSTEMS:
ALL TIMBER SHALL BE CHROMATED-COPPER-ARSENATE (CCA) TREATED SOUTHERN PINE, STRUCTURAL LUMBER GRADED NO. 1 OR BETTER, KILN DRIED AFTER TREATMENT. THE MINIMUM CCA TREATMENT RETENTION SHALL BE IN ACCORDANCE WITH THE SPECIAL PROVISION SPECIFICATIONS. ANY AREAS DAMAGED DURING THE FABRICATION OR INSTALLATION OF THE DECK PANELS AND RAILINGS SHALL BE RETREATED WITH AN APPROVED PRESERVATIVE TREATMENT AT NO ADDED COST TO THE OWNER. ALL FASTENERS USED IN THE DECK AND RAILING SYSEMS SHALL BE HOT DIPPED GALVANIZE COATED. TENSIONING OF THE STRESSING RODS USED THROUGHOUT THE DECK PANELS SHALL BE IN ACCORDANCE WITH THE SPECIAL PROVISION SPECIFICATIONS.

85 PSF PEDESTRIAN LOADING OR LOADED PICKUP TRUCK (5,200 LB VEHICLE WITH 70% OF THE WEIGHT OF THE REAR AXLE) NO IMPACT, WHICHEVER PRODUCES THE MAXIMUM STRESS.

NOTES:

1. FOR ADDITIONAL GENERAL NOTES SEE SHEET 16 OF 39.

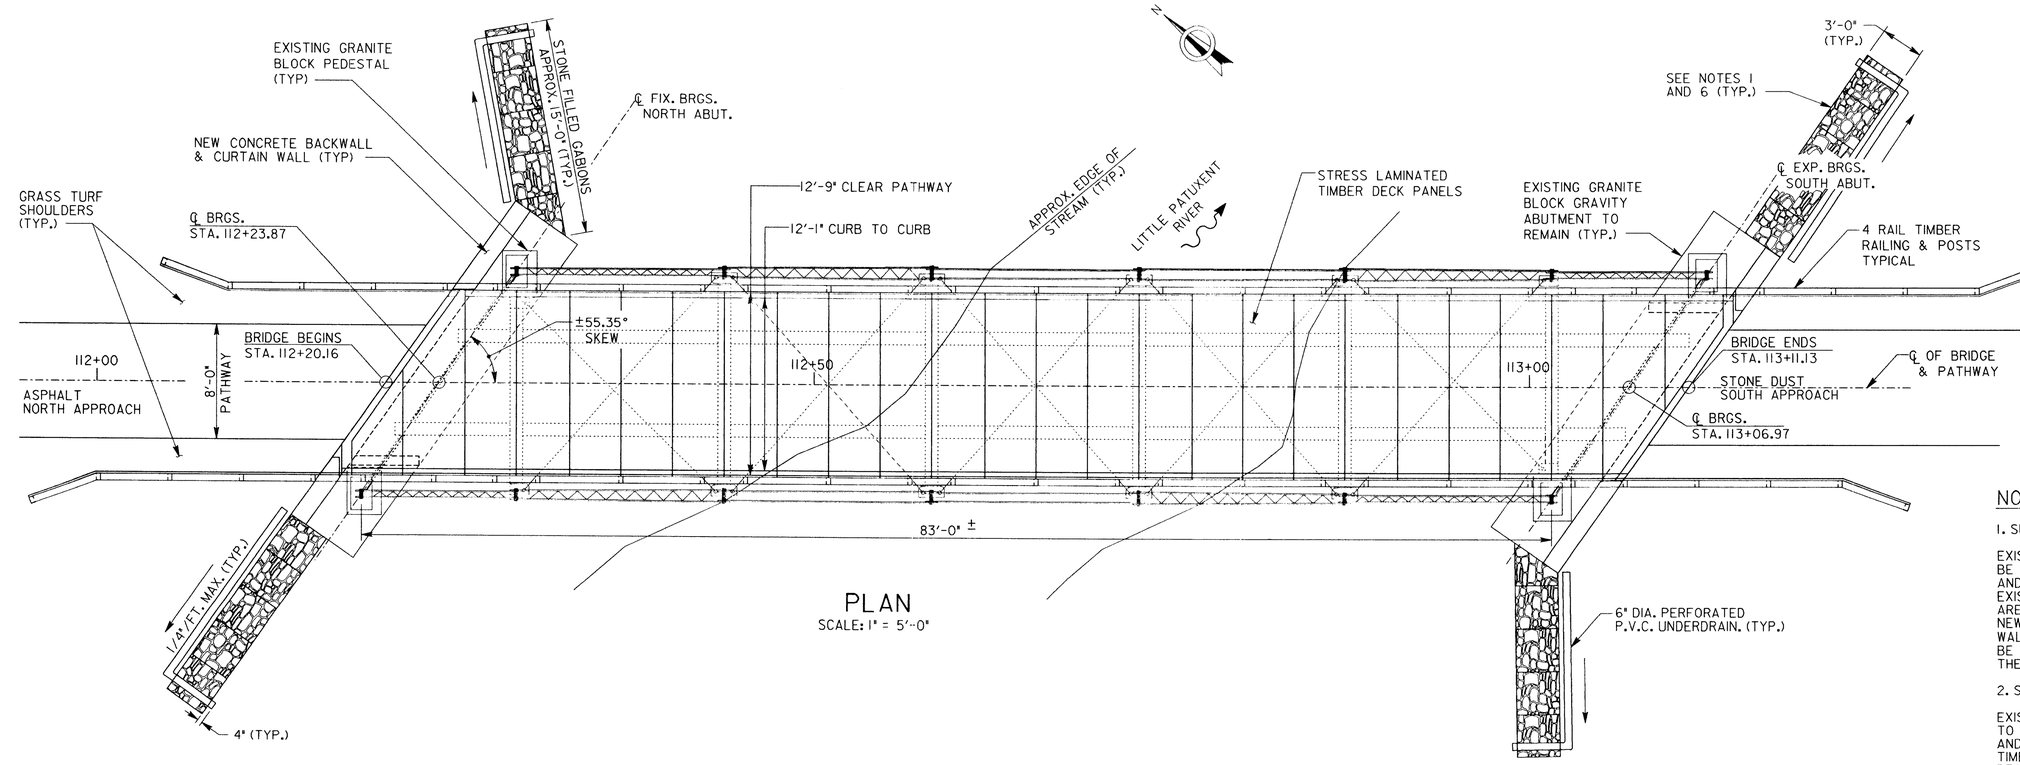
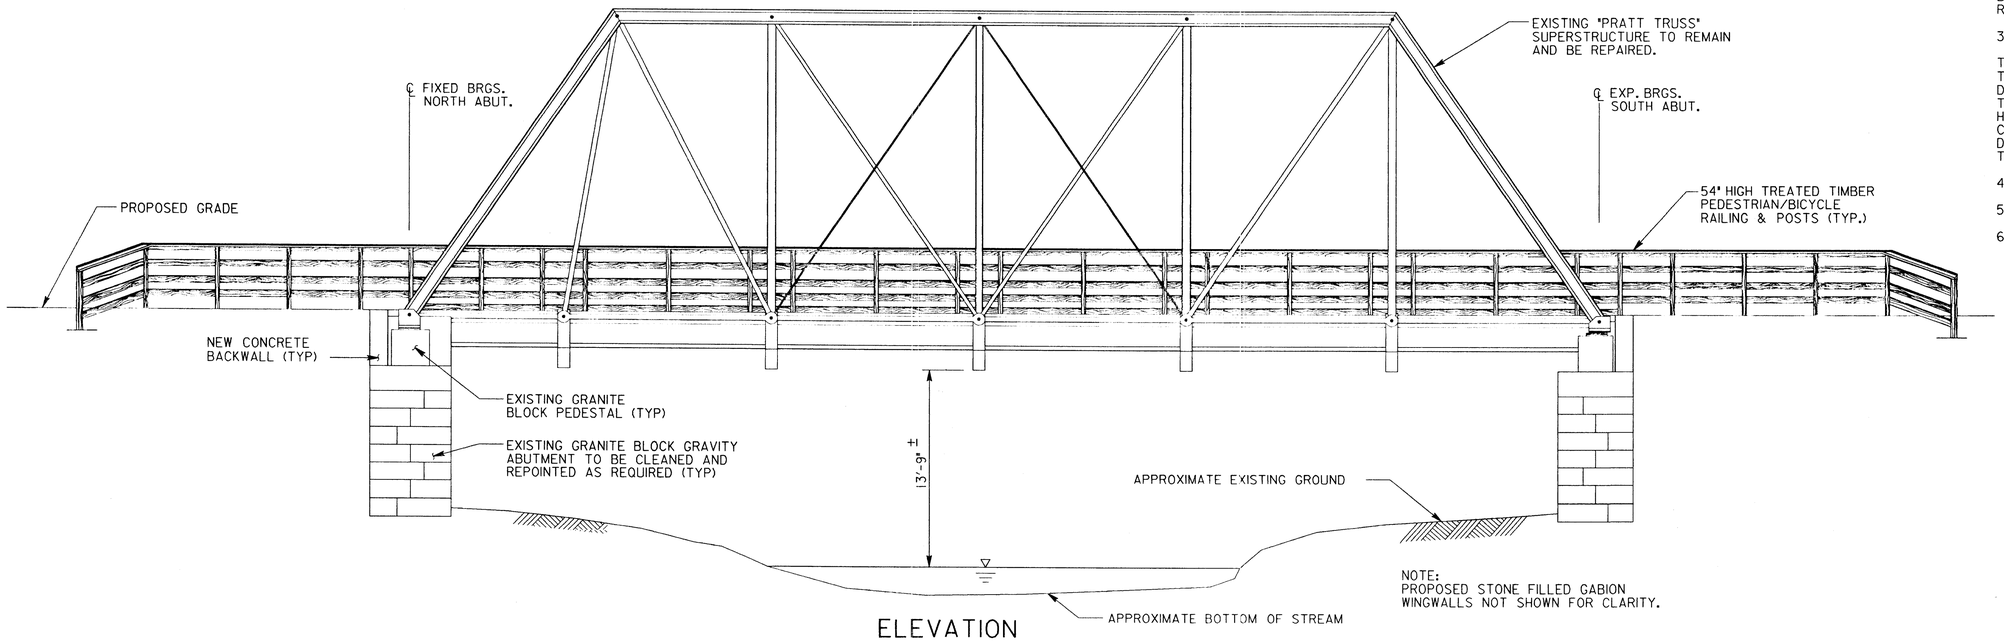
SHEET 19 OF 39



PLAN
SCALE: 1" = 5'-0"



ELEVATION
(LOOKING DOWNSTREAM)
SCALE: 1" = 5'-0"

NOTES:

1. SUBSTRUCTURE:

EXISTING GRANITE BLOCK GRAVITY ABUTMENTS TO BE PRESSURE WASH CLEANED REMOVING ALL DEBRIS AND GRAFFITI. REPOINT GROUTED JOINTS AS REQUIRED. EXISTING CONCRETE BACKWALLS AT BOTH ABUTMENTS ARE TO BE REMOVED, DISPOSED AND REPLACED WITH NEW REINFORCED CONCRETE BACKWALLS AND SUPPORT WALLS. NEW STONE FILLED GABION WINGWALLS ARE TO BE CONSTRUCTED. THE CONTRACTOR SHALL PROVIDE THE DESIGN OF GABION WINGWALLS.

2. SUPERSTRUCTURE:

EXISTING RIVETED "PRATT TRUSS" SUPERSTRUCTURE TO BE PRESSURE WASH CLEANED, REMOVING ALL DEBRIS AND GRAFFITI, AND REHABILITATED AS PER PLANS. A NEW TIMBER DECK AND RAILING TO BE INSTALLED. EXISTING BEARINGS AND ANCHOR BOLTS TO BE REMOVED AND REPLACED.

3. UTILITIES:

THERE ARE NO VISIBLE UTILITY SERVICES NOTED AT THE BRIDGE SITE. ADDITIONAL UTILITY LINES, ABANDONED OR IN SERVICE, MAY EXIST AND IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO CONDUCT HIS OPERATIONS AND TAKE THE NECESSARY PRECAUTIONS TO PREVENT INTERFERENCE WITH OR DAMAGE TO THESE OR OTHER FACILITIES DURING THE COURSE OF CONSTRUCTION OPERATIONS.

4. FOR GENERAL NOTES SEE SHEETS 16 AND 19 OF 39.

5. FOR TRANSVERSE SECTION SEE SHEET 21 OF 39.

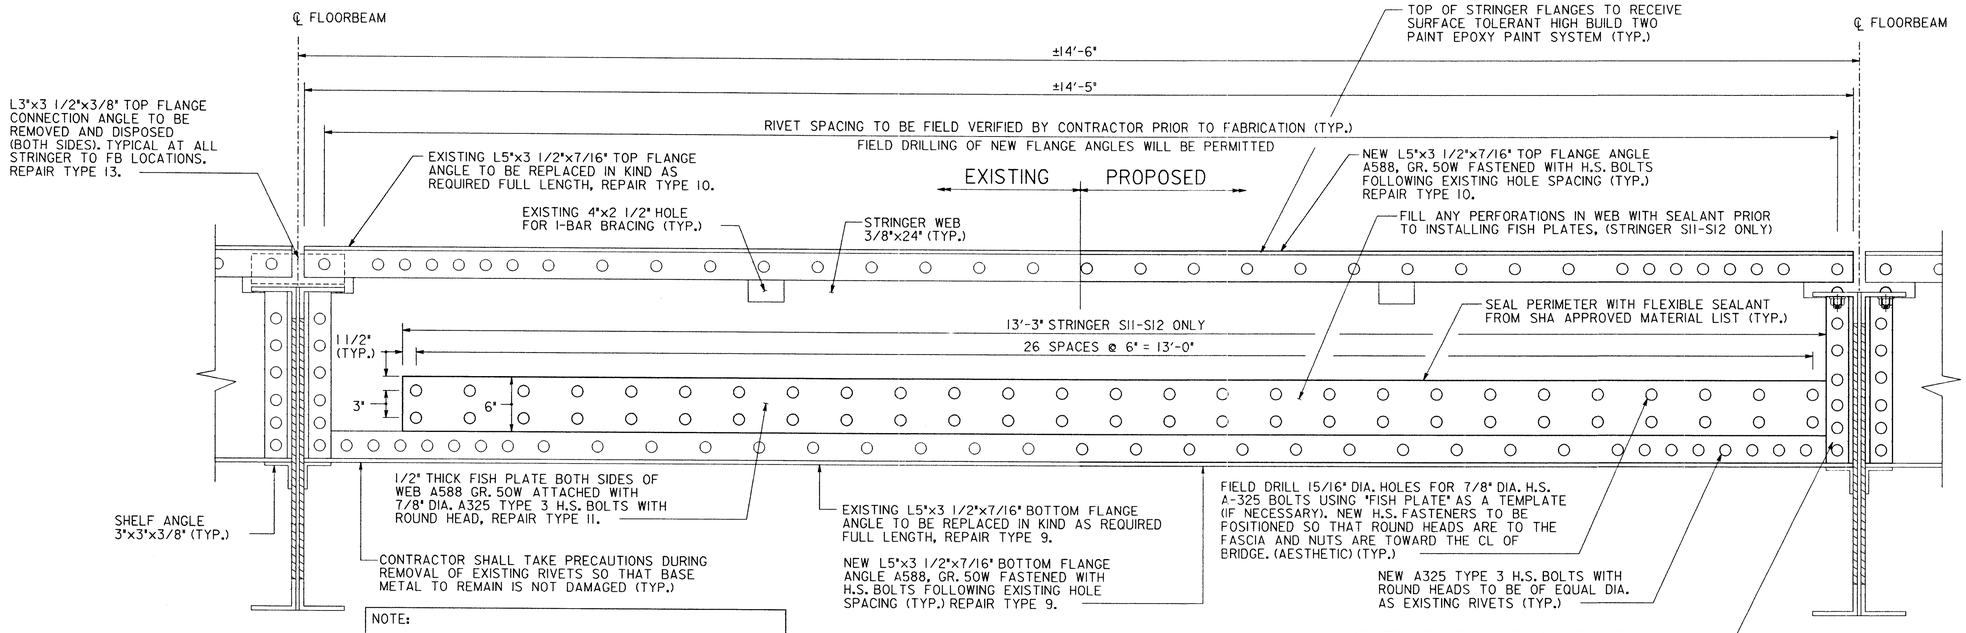
PROPOSED CONNECTION

STRINGER TO WEB CONNECTION REPAIR TYPE 8

SCALE: 1 1/2" = 1'-0"



NOTE:

IT IS NOT NECESSARY TO REMOVE & REPLACE BOTH STRINGER FLANGE ANGLES AT REPAIR LOCATIONS. CONTRACTOR SHALL RECEIVE APPROVAL BY E.I.C. PRIOR TO DISASSEMBLY OF FLANGES (TYP.)

STRINGER WEB AND FLANGE REPAIRS TYPE 9, 10 AND 11

SCALE: 1 1/2" = 1'-0"

NOTES:

1. THE PLATES SIZES SHOWN ARE FOR ESTIMATING PURPOSES ONLY AND ARE NOT INTENDED TO BE USED AS PAYMENT QUANTITIES.
2. THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS SHOWN AND SUBMIT DETAILED SHOP DRAWINGS TO THE ENGINEER SHOWING THE PROPOSED PLATE SIZES AND WEIGHTS. THE CONTRACTOR SHALL ALSO SUBMIT HIS PROPOSED REPAIR PROCEDURES AND TEMPORARY SUPPORTING METHODS
3. ALL DRILLING OF THE REPAIR PLATES AND THE EXISTING FLOORBEAM WEB AS WELL AS THE FLEXIBLE CAULK SEALANT SHALL BE INCLUDED IN THE PRICE BID FOR THE INSTALLATION OF THE WEB REPAIR PLATES.
4. ALL STEEL REPAIR PLATES SHALL BE ASTM A-588.
5. ALL NUTS, BOLTS AND WASHERS SHALL BE A-325, TYPE 3 (WEATHERING). ALL BOLTS SHALL HAVE ROUND HEADS. NEW BOLT SIZE SHALL MATCH THE SIZE OF THE EXISTING HOLES / RIVETS UNLESS NOTED OTHERWISE.
6. SEE SHEET 31 OF 39 FOR LOCATIONS OF STEEL REPAIRS.
7. ALL FLOORBEAMS SHALL BE TEMPORARILY SUPPORTED AND SECURED IN PLACE PRIOR TO COMMENCEMENT OF ANY REPAIR WORK.
8. IT IS NOT NECESSARY TO REMOVE AND REPLACE BOTH STRINGER TO WEB CONNECTION ANGLES AT ALL LOCATIONS. CONTRACTOR SHALL REMOVE AND REPLACE CONNECTION ANGLES ONLY AT LOCATIONS APPROVED BY THE ENGINEER.
9. NO FLAME CUTTING OR WELDING OF ANY EXISTING MEMBER WILL BE ALLOWED.
10. FIELD DRILLING OF THE NEW FLANGE ANGLES WILL BE ALLOWED, UTILIZING THE EXISTING STRINGER WEB RIVET HOLES AS A GUIDING TEMPLATE.
11. TOP OF STRINGER FLANGES TO BE HAND TOOL CLEANED (SP-2) AND POWER TOOL CLEANED (SP-3) IN ACCORDANCE WITH THE STEEL STRUCTURES PAINTING COUNCIL (SSPC). AFTER REMOVAL OF ALL RUST, LOOSE MILL SCALE, PAINT AND OTHER DETRIMENTAL FOREIGN MATTER, THE SURFACE SHALL BE SOLVENT CLEANED (SP-1) PRIOR TO THE APPLICATION OF THE HIGH BUILD TWO PART EPOXY PAINT.
12. THE SURFACE TOLERANT HIGH BUILD TWO PART EPOXY PAINT SYSTEM SHALL BE ACCEPTED BY THE E.I.C. FROM THE APPROVED LIST OF MATERIALS AND SHALL BE OF A COLOR SIMILAR TO THAT OF THE NATURAL COLOR OF THE SUPERSTRUCTURE STEEL.

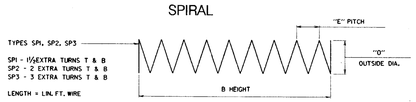
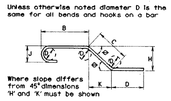
TYPICAL BAR BENDS

DETAILS AND NOTES

SPIRAL



Unless otherwise noted diameter D is the same for all bends and hooks on a bar



Where slope differs from 45° dimensions 'H' and 'K' must be shown

ENLARGED VIEW SHOWING BAR BENDING DETAILS

Notes:
1. All dimensions are out-to-out of bar or to tangent points for 135° and 180° hooks.
2. 'J' dimensions on 180° hooks to be shown only where necessary to restrict hook size. Otherwise standard hooks are to be used.
3. Where 'J' is not shown, 'J' will be kept equal to or less than 'H' on truss bars. Where 'J' can exceed 'H' it should be shown.
4. 'H' dimension on stirrups to be shown where necessary to fit within concrete.
5. Where bars are to be bent more accurately than standard bending tolerances, bending dimensions which require closer fabrication should have limits indicated.

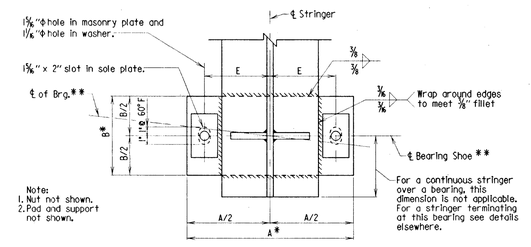
ME50 - VIII	32	20½	2½	30	18½	2⅜	1 ±	20	32	24	2	14	3	5⅝	630	60	315	2¾

Note: All dimensions are in inches.

Note:
1. Sole and masonry plates to be A 709 Grade 50, steel painted to match finished bridge color, convex plate shall be a self lubricating bronze bearing plate conforming to 910.01.
2. Fill slots and holes around anchor bolts with nonhardening caulking compound or elastic joint sealer.
3. 1000 RMS (Finish all over) except where otherwise noted.
4. Rotation ½° ± Maximum.
5. Design Masonry Bearing Load 1.0 KSI.
6. Top of sole plate must be beveled to fit grade of bottom flange.
7. Unless otherwise noted, bearings shall be placed normal to ℄ of stringer.
8. Plates are to be shipped as units.
9. If more than one size bearing is called for, Contractor may furnish all bearings of the larger size provided the bearing pads are altered to accommodate same. No increase in any prices bid will be allowed if this option is selected.
10. All anchor bolts and washers shall be unpainted A 709 Grade 36 galvanized steel. All nuts shall be unpainted A 307 galvanized steel.
11. Medium span range is considered 50' to 150' simple span lengths and comparable span continuous units.

BRONZE EXPANSION BEARING
MEDIUM LENGTH SPANS
(GRADE 50 STEEL)

NO. BR-SS(9.05)-99-335 SHEET 2 OF 2



Note:

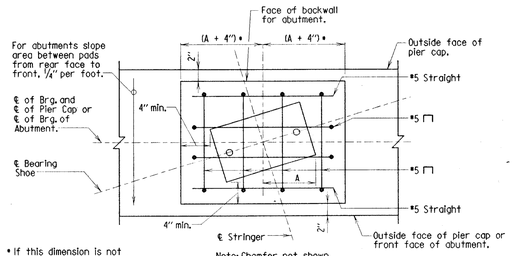
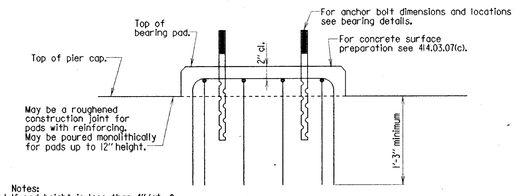
NO. M16.07)-81-127 SHEET 3 OF 3



* If this dimension is not shown on contract drawing it shall be established for the largest value necessary on a support to the nearest higher inch, and the same dimension used for every pad on that support.

Note: Chamfer not shown.

PLAN
Scale: 1" = 1'-0"



Notes:
1. If pad height is less than 4" (at ℄ of Bearing), all dimensions, etc. shown on this sheet will prevail except no reinforcing steel will be required and pad must be poured monolithically with support.
2. Anchor bolts shall be set in round holes drilled or cored into the masonry.
3. The drilled or cored holes shall have a diameter of at least 1" larger than the diameter of the bolts.
4. Holes shall be filled with nonshrink grout. Nonshrink grout shall have a min. comp. strength of 5000 p.s.i. in 7 days when tested in accordance with AASHTO T 106, except that the cube molds shall remain intact with a top firmly attached throughout the curing period. The nonshrink grout shall have a minimum expansion of 0.02% after 7 days when tested in accordance with AASHTO T-160.
5. For size of pad see pertinent substructure sheets. If not available see note in plan above.
6. Space reinforcing steel to clear anchor bolts.

ELEVATION
Scale: 1" = 1'-0"

BEARING PAD WHERE ONLY A SINGLE SHOE IS REQUIRED ON A SUPPORT

GENERAL NOTES

1. COORDINATES SHOWN HEREON ARE BASED ON HOWARD COUNTY GEODETIC SYSTEM POINT NOS. 2241004, 2241011 & 2341002. NAD 27 DATUM
2. CONTRACTOR SHALL LOCATE EXISTING UTILITIES A MINIMUM OF TWO (2) WEEKS IN ADVANCE OF CONSTRUCTION OPERATIONS IN THE VICINITY OF PROPOSED UTILITIES AT NO COST TO THE COUNTY THEN IF DIRECTED BY THE ENGINEER, TEST PITS SHALL BE DUG AT UTILITY CROSSINGS TO DETERMINE EXISTING HORIZONTAL AND VERTICAL ALIGNMENT OF UTILITIES.
3. CONTRACTOR SHALL NOTIFY THE FOLLOWING UTILITIES OR AGENCIES AT LEAST FIVE (5) WORKING DAYS BEFORE STARTING WORK SHOWN ON THESE PLANS:

   MISS UTILITY 1-800-257-7777
   CONSTRUCTION INSPECTION DIVISION, HOWARD COUNTY (410) 313-1880
   STATE HIGHWAY ADMINISTRATION (410) 531-5533
   BALTIMORE GAS & ELECTRIC COMPANY - UNDERGROUND ELECTRIC
   DISTRIBUTION CUSTOMER SERVICE (410) 685-0123
   ENGINEERING DAMAGE CONTROL (410) 234-5621
   BELL ATLANTIC TELEPHONE 1-800-870-0000
   AMERICAN TELEPHONE & TELEGRAPH CABLE LOCATION DIVISION (410) 393-3553
   COLONIAL PIPELINE COMPANY (410) 781-4641
   BUREAU OF UTILITIES, HOWARD COUNTY (410) 313-4900
4. AVOID DAMAGE TO TREES ON THE PATHWAY TO MAXIMUM EXTENT. OTHER TREES WITHIN LIMITS OF CONSTRUCTION SHALL NOT BE DESTROYED WITHOUT APPROVAL OF THE ENGINEER, TREES > 12'Ø WITHIN 5' OF LOD WILL BE PROTECTED. SEE DETAIL SHEET NO. 15.
5. CONTRACTOR SHALL REMOVE TREES, STUMPS, AND ROOT ALONG LINE OF EXCAVATION AS DIRECTED BY THE ENGINEER. PAYMENT FOR SUCH REMOVAL SHALL BE INCLUDED IN THE LUMP SUM PRICE BID. FOR CLEARING AND GRUBBING. CARE SHALL BE TAKEN TO AVOID DISTURBANCE OF EXISTING TREES TO REMAIN.
6. PLACE REGULATION WARNING SIGNS AS REQUIRED TO COMPLY WITH MARYLAND STATE HIGHWAY ADMINISTRATION MANUAL OF TRAFFIC CONTROL FOR HIGHWAY CONSTRUCTION AND MAINTENANCE OPERATIONS. PAYMENT FOR THIS ITEM SHALL BE INCIDENTAL TO OTHER BID ITEMS. ALL STREET AND REGULATORY SIGNS SHALL BE IN PLACE PRIOR TO ANY ASPHALT PAVING. NO TRAFFIC STUDY IS REQUIRED.
7. ALL GRADING SHALL BE LIMITED TO 16' R.O.W. INCLUDING SIDE SLOPES AND STABILIZATION (EXCEPT WHERE LOD INDICATES A WIDER AREA. FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED AS FOLLOWS:
   A. SEVEN (7) CALENDAR DAYS FOR THE SURFACE OF ALL PERIMETER CONTROLS, DIKES, SWALES, DITCHES, PERIMETER SLOPES, AND ALL SLOPES, AND ALL SLOPES GREATER THAN THREE HORIZONTAL TO ONE VERTICAL (3:1); AND
   B. FOURTEEN (14) CALENDAR DAYS FOR ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.
8. FOR DETAILS NOT SHOWN ON THESE DRAWINGS, AND FOR MATERIALS AND CONSTRUCTION METHODS, THE CONTRACTOR SHALL ABIDE BY THE MARYLAND STATE HIGHWAY ADMINISTRATION'S "BOOK OF STANDARDS FOR HIGHWAY AND INCIDENTAL STRUCTURES," "STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS" AND THE SPECIAL PROVISIONS. IN THE EVENT OF ANY DISCREPANCY BETWEEN THESE SOURCES, THE SPECIAL PROVISIONS SHALL GOVERN.
9. ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF HOWARD COUNTY PLUS MSHA STANDARDS AND SPECIFICATIONS IF APPLICABLE.
10. THE PATHWAY SHALL BE MAINTAINED AFTER CONSTRUCTION BY THE HOWARD COUNTY DEPARTMENT OF RECREATION AND PARKS.
11. UNLESS INDICATED OTHERWISE, NEW PATHWAY SHALL NOT EXCEED 5% SLOPE.

The New Town portion of this proposal is not subject to Forest Conservation Program requirements per Section 16.1202(b)(iv) & the Non-New Town zoned portions (700 L.f.) all fall within previously assigned rights-of-way for roads & utilities.

FEE-IN-LIEU OF STORMWATER MANAGEMENT APPROVAL WAS GRANTED ON FEBRARY 25, 1999.

RIGHT-OF-WAY LINES SHOWN ON THESE PLANS DO NOT INCLUDE EASEMENTS. THEY ARE FOR ASSISTANCE IN INTERPRETING THE PLANS. THEY ARE NOT FOR OFFICIAL FEE RIGHT-OF-WAY AND EASEMENT INFORMATION. SEE APPROPRIATE RIGHT-OF-WAY PLAT OR PLATS.

THE LOCATIONS OF EXISTING UTILITIES SHOWN ON THE PLANS ARE FOR INFORMATION AND GUIDANCE ONLY. NO GUARANTEE IS MADE AS TO THE ACCURACY OF SAID LOCATIONS. CALL "MISS UTILITY", 1-800-257-7777 FOR UTILITY LOCATIONS AT LEAST 48 HOURS BEFORE BEGINNING CONSTRUCTION.

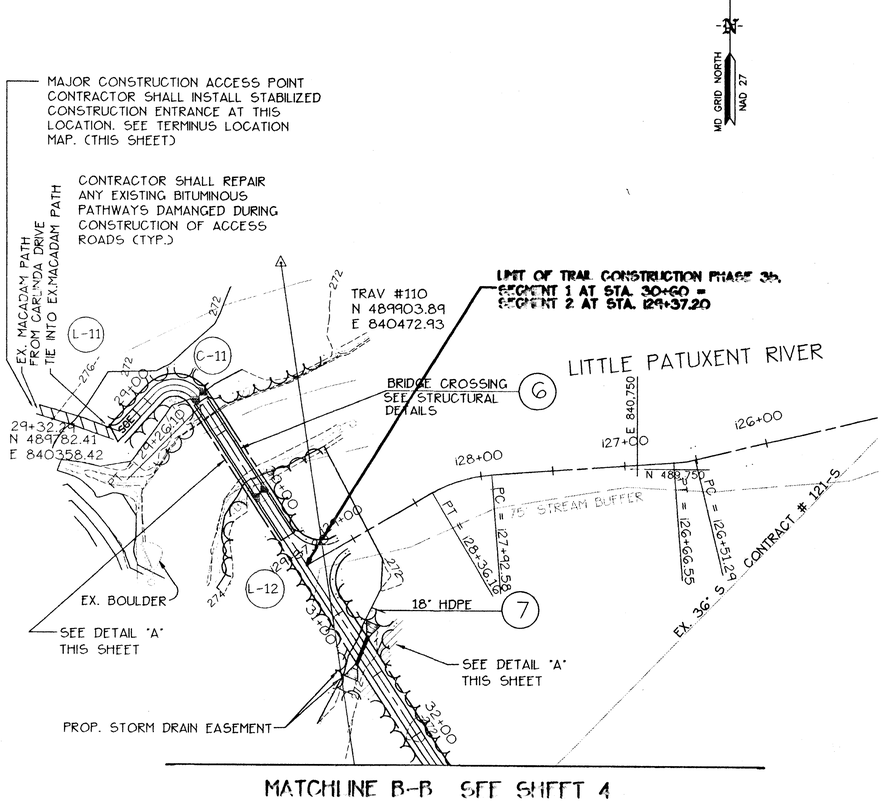
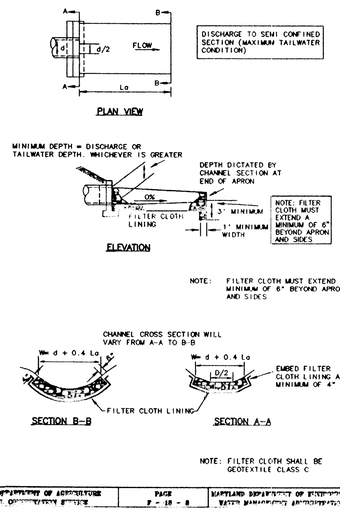
DETAIL "A"



DETAIL 25 - ROCK OUTLET PROTECTION I	ROCK OUTLET PROTECTION



Construction Specifications

1. The subgrade for the filter, rip-rap, or gabion shall be prepared to the required lines and grades. Any fill required in the subgrade shall be compacted to a density of approximately that of the surrounding undisturbed material.

2. The rock or gravel shall conform to the specified grading limits when installed respectively in the rip-rap or filter.

3. Geotextile shall be protected from punching, cutting, or tearing. Any damage other than an occasional small hole shall be repaired by placing another piece of geotextile over the damaged part or by completely replacing the geotextile. All overlaps whether for repairs or for joining two pieces of geotextile shall be a minimum of one foot.

4. Stone for the rip-rap or gabion outlets may be placed by equipment. They shall be constructed to the full course thickness in one operation and in such a manner as to avoid displacement of underlying materials. The stone for rip-rap or gabion outlets shall be delivered and placed in a manner that will ensure that it is reasonably homogeneous with the smaller stones and spalls filling the voids between the larger stones. Rip-rap shall be placed in a manner to prevent damage to the filter blanket or geotextile. Hand placement will be required to the extent necessary to prevent damage to the permanent works.

5. The stone shall be placed so that it blends in with the existing ground. If the stone is placed too high then the flow will be forced out of the channel and scour adjacent to the stone will occur.

BEST MANAGEMENT PRACTICES FOR WORKING IN NONTIDAL WETLANDS

1. NO EXCESS FILL, CONSTRUCTION MATERIAL, OR DEBRIS ARE TO BE STOCKPILED OR STORED IN THE WETLAND OR BUFFER.
2. PLACE MATERIALS IN A LOCATION AND MANNER WHICH DOES NOT ADVERSELY IMPACT SURFACE OR SUBSURFACE WATER FLOW INTO OR OUT OF THE NONTIDAL WETLAND.
3. DO NOT USE THE EXCAVATED MATERIAL AS BACKFILL IF IT CONTAINS WASTE METAL PRODUCTS, UNSIGHTLY DEBRIS, TOXIC MATERIAL OR ANY OTHER DELETERIOUS SUBSTANCE. IF ADDITIONAL BACKFILL IS REQUIRED, USE CLEAN MATERIAL FREE OF WASTE METAL PRODUCTS, UNSIGHTLY DEBRIS, TOXIC MATERIAL OR ANY OTHER DELETERIOUS SUBSTANCE.
4. PLACE HEAVY EQUIPMENT ON MATS OR SUITABLY OPERATE THE EQUIPMENT TO PREVENT DAMAGE TO THE NONTIDAL WETLANDS OR BUFFER.
5. REPAIR AND MAINTAIN ANY SERVICEABLE STRUCTURE OR FILL SO THERE IS NO PERMANENT LOSS OF NONTIDAL WETLANDS IN EXCESS OF NONTIDAL WETLANDS LOST UNDER THE ORIGINAL STRUCTURE OF FILL.
6. RECTIFY ANY NONTIDAL WETLANDS TEMPORARILY IMPACTED BY ANY CONSTRUCTION.
7. ALL STABILIZATION IN THE WETLAND AND BUFFER SHALL BE OF THE FOLLOWING RECOMMENDED SPECIES: ANNUAL RYEGRASS (LOLIUM MULTIFLORUM, MILLET (SETARIA ITALICA), BARLEY (HORDEUM SP.), OATS (UNIOLA SP.), AND/OR RYE (SECALE CEREALE). THESE SPECIES WILL ALLOW FOR THE STABILIZATION OF THE SITE WHILE ALSO ALLOWING FOR THE VOLUNTARY REVEGETATION OF NATURAL WETLAND SPECIES. OTHER NON-PERSISTENT VEGETATION MAY BE ACCEPTABLE, BUT MUST BE APPROVED BY THE DIVISION. KENTUCKY 31 FESCUE SHALL NOT BE UTILIZED IN THE WETLAND OR BUFFER AREAS. THE AREA SHOULD BE SEEDED SEEDED AND MULCHED TO REDUCE EROSION AFTER CONSTRUCTION ACTIVITIES HAVE BEEN COMPLETED.
8. AFTER INSTALLATION HAS BEEN COMPLETED, MAKE POST CONSTRUCTION GRADES AND ELEVATIONS OF NONTIDAL WETLANDS THE SAME AS THE ORIGINAL GRADES AND ELEVATIONS IN TEMPORARILY IMPACTED AREAS.
9. TO PROTECT IMPORTANT AQUATIC SPECIES, IN-STREAM WORK IS PROHIBITED AS DETERMINED BY THE CLASSIFICATION OF THE STREAM. USE I WATERS: IN-STREAM WORK SHALL NOT BE CONDUCTED DURING THE PERIOD OF MARCH 1 THROUGH JUNE 15, INCLUSIVE, DURING ANY YEAR.
10. STORMWATER RUNOFF FROM IMPERVIOUS SURFACES SHALL BE CONTROLLED TO PREVENT THE WASHING OF DEBRIS INTO THE WATERWAY.
11. CULVERT(S) SHALL BE CONSTRUCTED AND ANY RIP-RAP PLACED SO AS NOT TO OBSTRUCT THE MOVEMENT OF AQUATIC SPECIES, UNLESS THE PURPOSE OF THE ACTIVITY IS TO IMPOUND WATER.

19.0 STANDARDS AND SPECIFICATIONS FOR LAND GRADING

Design Criteria

The grading plan should be based upon the incorporation of building designs and street layouts that fit and utilize existing topography and desirable natural surroundings to avoid extreme grade modifications. Information submitted must provide sufficient topographic surveys and soil investigations to determine limitations that must be imposed on the grading operation related to slope stability, effect on adjacent properties and drainage patterns, measures for drainage and water removal and vegetative treatment, etc.

Many counties have regulations and design procedures already established for land grading and cut and fill slopes. Where these requirements exist, they shall be followed. The plan must show existing and proposed contours of the area(s) to be graded. The plan shall also include practices for erosion control, slope stabilization, safe disposal of runoff water and drainage, such as waterways, lined ditches, reverse slope benches (include grade and cross section), grade stabilization structures, retaining walls, and surface and subsurface drains. The plan shall also include phasing of these practices. The following shall be incorporated into the plan:

I. Provisions shall be made to safely conduct surface runoff to storm drains, protected outlets or to stable water courses to insure that surface runoff will not damage slopes or other graded

II. Cut and fill slopes that are to be stabilized with grasses shall not be steeper than 2:1. (Where the slope is to be mowed the slope should be no steeper than 3:1; 4:1 is preferred because of safety factors related to mowing steep slopes.) Slopes exceeding 2:1 shall require special design and stabilization considerations that shall be adequately shown on the plans.

III. Reverse benches shall be provided whenever the vertical interval (height) of any 2:1 slope exceeds 20 feet; for 3:1 slope it shall be increased to 30 feet and for 4:1 to 40 feet. Benches shall be located to divide the slope face as equally as possible and shall convey the water to a stable outlet. Soils, seeps, rock outcrops, etc., shall also be taken into consideration when designing benches.

A. Benches shall be a minimum of six-feet wide to provide for ease of maintenance.

B. Benches shall be designed with a reverse slope of 6:1 or flatter to the toe of the upper slope and with a minimum of one foot in depth. Bench gradient to the outlet shall be between 2 percent and 3 percent, unless accompanied by appropriate design and computations.

C. The flow length within a bench shall not exceed 800' unless accompanied by appropriate design and computations. For flow channel stabilization see temporary

IV. Surface water shall be diverted from the face of all cut and/or fill slopes by the use of earth dikes, ditches and swales or conveyed downslope by the use of a designed structure, except

A. The face of the slope is or shall be stabilized and the face of all graded slopes shall be protected from surface runoff until they are stabilized.

B. The face of the slope shall not be subject to any concentrated flows of surface water such as from natural drainageways, graded swales, downspouts, etc.

C. The face of the slope will be protected by special erosion control materials, to include, but not limited to: approved vegetative stabilization practices (see section G), rip-rap or other approved stabilization methods.

V. Cut slopes occurring in ripable rock shall be serrated as shown on the following diagram. These serrations shall be made with conventional equipment as the excavation is made. Each step or serration shall be constructed on the contour and will have steps cut at nominal two-foot intervals with nominal three-foot horizontal shelves. These steps will vary depending on the slope ratio or the cut slope. The nominal slope line is 1:1. These steps will weather and act to hold moisture, lime, fertilizer and seed thus producing a much quicker and longer lived vegetative cover and better slope stabilization. Overland flow shall be diverted from the top of all serrated cut slopes and carries to a suitable outlet.

VI. Subsurface drainage shall be provided where necessary to intercept seepage that would otherwise adversely affect slope stability or create excessively wet site conditions.

VII. Slopes shall not be created so close to property lines as to endanger adjoining properties without adequately protecting such properties against sedimentation, erosion, slippage, settlement, subsidence or other related damages.

VIII. Fill material shall be free of brush, rubbish, rocks, logs, stumps, building debris, and other objectionable material. It should be free of stones over two (2) inches in diameter where compacted by hand or mechanical tampers or over eight (8) inches in diameter where compacted by rollers or other equipment. Frozen material shall not be placed in the fill nor shall the fill material be placed on a frozen foundation.

IX. Stockpiles, borrow areas and spoil shall be shown on the plans and shall be subject to the provisions of this Standard and Specifications.

X. All disturbed areas shall be stabilized structurally or vegetatively in compliance with 20.0 Standards and Specifications for Vegetative Stabilization.

SEQUENCE OF CONSTRUCTION*

Number of days

1. Contact the Howard County Sediment Control Inspector 48 hours prior to start Of work. Inform the inspector of the starting date.
3 days 2. Stabilized construction entrances to be installed at all access points to the path.
5 days 3. Contractor shall stake out entire length of project prior to any clearing and grubbing. The proposed pathway alignment shall be approved by Howard County DPW prior to construction.
224 days 4. Contractor to construct the path in 100 l.f. segments. Each segment to be stabilized with graded aggregate sub-base and seed & mulch immediately. Contractor shall gain permission from Sediment control inspector prior to the start of the next segment **
5 days 5. Wood chips from cleared trees to be used to stabilize the disturbed areas in the wooded sections of the path. Seed, mulch, and curlex to be used on the sections of the path exposed to sunlight. Shady Seed mix shall be used in all Shaded Areas. *
3 days 6. Remove all sediment and erosion control measures after acquiring approval from Howard County SCD Inspector.

Total Days 240

* Wetland Seed Mix to be installed in Wetland Areas.
** "Thank-You-Ma'am" Shall be installed in all Sloped areas. See Detail 9h.15.

Note: Before work begins, the contractor shall place protective tree fence around all trees > 12" diameter within 5' of L.O.D using the detail on sheet 15.

Wetland Seed Mix Table For Turf Establishment

Botanical Name	Common Name	Percent of Seed Mix	Purity Percent Min.	Weedseed Percent Max.	Germanation Percent Min.
Poa Trivialis L.	Rough Stalk Bluegrass	10	90	1	80
Agrostis Alba L.	Red Top	30	90	1	80
Lolium Species	Annual Ryegrass	30	90	1	80
Panicum Virgatum L.	Switch Grass	30	90	1	80

Note:
- Application rate shall be 120 lbs/Acre.
- Seed mix percentages are based upon weight.
- This seed mix will be used in areas that are delineated as wetlands on the Construction Documents unless otherwise directed by the engineer.
- Seeds shall be mixed offsite and delivered throughly mixed.
- This mix is to be used for temporary seeding when directed by the engineer.

Seed Mix Table For Turf Establishment In Shaded areas

Common Name	Percent of Seed Mix	Purity Percent Min.	Weedseed Percent Max.	Germanation Percent Min.
Shadow chewing fescue or other improved chewing fescue	30	90	1	80
Aurora hard fescue or other improved hard fescue	30	90	1	80
Flyer creeping red fescue or other creeping red fescue	20	90	1	80
Glade kentucky bluegrass or improved kentucky bluegrass	10	90	1	80
Manhattan II, Affinity or other improved perenial ryegrass	10	90	1	80

Note:
- Application rate shall be 20 lbs/Acre.
- Seed mix percentages are based upon weight.
- This seed mix will supersede any other permanent seed mixture listed in the Contract Documents unless otherwise allowed by the engineer.
- Seeds shall be mixed offsite and delivered throughly mixed.
- This mix is to be used for temporary seeding when directed by the engineer.

HOWARD SOIL CONSERVATION DISTRICT

PERMANENT SEEDING NOTES

Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, disking or other acceptable means before seeding, if not previously loosened.

Soil Amendments: In lieu of soil test recommendations, use one of the following schedules:
1. Preferred – Apply 2 tons/acres dolomitic limestone (92 lbs/1000 sq. ft.) And 600 lbs/acre 10–10–10 fertilizer (14 lbs/1000 sq. ft.) before seeding. Harrow or disk into upper three inches of soil. At time of seeding, apply 400 lbs/acre 30–0–0 ureaform fertilizer (9 lbs/1000 sq. ft.)
2. Acceptable – Apply 2 tons/acres dolomitic limestone (92 lbs/1000 sq. ft.)and 1000 lbs/acre 10–10–10 fertilizer (23 lbs/1000 sq. ft.) Before seeding. Harrow or disk into upper three inches of soil.

Seeding: For the periods March 1 – April 30, and August 1 – October 15, seed with 60 lbs/acres (1.4 lbs/1000 sq. ft.) Of Kentucky 31 Tall Fescue per acres and 2 lbs/acre (0.05 lbs/1000 sq. ft.) Of weeping lovegrass. During the period of October 16 – Febroary 28, protect site by:
Option 1 – Two tons per acres of well anchored straw mulch and seed as soon as possible in the spring.
Option 2 – use sod.
Option 3 – seed with 60 lbs/acres Kentucky 30 tall fescue and mulch with 2 tons/acre well anchored straw.

Mulching: Apply 1–1/2 to 2 tons per acre (70 – 90 lbs/1000 sq. ft.)of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq. ft.) of emulsified asphalt on flat areas. On slope 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq. ft.) for anchoring.

Maintenance: Inspect all seeding areas and make needed repairs, replacements and reseedings.

TEMPORARY SEEDING NOTES

Apply to graded or cleared areas likely to be re-disturbed where a short-term vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, disking or other acceptable means before seeding, if not previously loosened.

Soil Amendments: Apply 600 lbs/acre 10–10–10 fertilizer (14 lbs/1000 sq. ft.)

Seeding: For periods March 1 – April 30 and from August 15 – October 15, seed with 2–1/2 bushel per acre of annual rye (3.2 lbs/1000 sq. ft.). For the period May 1 – August 14, seed with 3 lbs/acre of weeping lovegrass (0.07 lbs/1000 lbs/sq. ft.). For the period November 16 – February 28, protect site by applying 2 tons/acre of well anchored straw mulch and seed as soon as possible in the spring, or use sod.

Mulching: Apply 1–1/2 to 2 tons per acre (70 – 90 lbs/1000 sq. ft.)of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq. ft.) of emulsified asphalt on flat areas. On slope 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq. ft.) for anchoring.

HOWARD SOIL CONSERVATION DISTRICT

STANDARD SEDIMENT CONTROL NOTES

1. A minimum of 48 hours notice must be given to the Howard County Department of Inspections, Licenses and Permits, Sediment Control Division prior to start of any construction (313–1855).
2. All vegetative and structural practices are to be installed according to the provisions of this plan and are to be in conformance with the 1994 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL and revisions thereto.
3. Following initial soil disturbance or re-disturbance, permanent or temporary stabilization shall be completed within:
   A) 7 calender days for all perimeter sediment control structures, dikes, perimeter slopes and all slopes steeper than 3:1.
   B) 14 calender days as to all other disturbed or graded areas on the project site.
4. All sediment traps/basins shown must be fenced and warning signs posted around their perimeter in accordance with Vol. 1, Chapter 7 of the HOWARD COUNTY DESIGN MANUAL, Storm drainage.
5. All disturbed areas must be stabilized within the time period specified above in accordance with the 1994 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for permanent seeding, sod, temporary seeding and mulching (section g). Temporary stabilization with mulch alone shall only be done when recommended seeding dates do not allow for proper germination and establishment of grasses.
6. All sediment control structures are to remain in place and are to be maintained in operative condition until permission for there removal has been obtained from the Howard County Sediment Control Inspector.
7. Site Analysis:

Total Area of Site	=	3.40 Acres
Area Disturbed	=	3.40 Acres
Area to be Roofed or Paved	=	1.58 Acres
Area to be Vegetatively Stabilized	=	1.82 Acres
Total Cut	=	3000 Cu. Yds.
Total Fill	=	3000 Cu. Yds.
Offsite waste/borrow area location		TO BE DETERMINED BY THE CONTRACTOR

* A site with a current active grading permit is needed for offsite waste/borrow

8. Any sediment control practice which is disturbed by grading activity for pigcement of utilities must be repaired on the same day of disturbance.
9. Additional sediment control must be provided, if deemed necessary by the Howard County Sediment Control Inspector.
10. On all sites with disturbed areas in excess of 2 acres, approval of the inspection agency shall be requested upon completion of installation of perimeter erosion and sediment controls, but before proceeding with any other earth disturbance or grading. Other building or grading inspection approvals may not be authorized until this initial approval by the inspection agency is made.
11. Trenches for the construction of utilities is limited to three pipe lengths or that which shall be back-filled and stabilized within one working day, whichever is shorter.

21.0 STANDARD AND SPECIFICATIONS FOR TOPSOIL

Definition

Placement of topsoil over a prepared subsoil prior to establishment of permanent vegetation.

Purpose

To provide a suitable soil medium for vegetative growth. Soils of concern have low moisture content, low nutrient levels, low pH, materials toxic to plants, and/or unacceptable soil gradation.

Conditions Where Practice Applies

I. This practice is limited to areas having 2:1 or flatter slopes where:
   A. The texture of the exposed subsoil/parent material is not adequate to produce vegetative growth.
   B. The soil material is so shallow that the rooting zone is not deep enough to support plants or furnish continuing supplies of moisture and plant nutrients.
   C. The original soil to be vegetated contains material toxic to plant growth.
   D. The soil is so acidic that treatment with limestone is not feasible.

II. For the purpose of these Standards and Specifications, areas having slopes steeper than 2:1 require special consideration and design for adequate stabilization. Areas having slopes steeper than 2:1 shall have the appropriate stabilization shown on the plans.

Construction and Material Specifications

I. Topsoil salvaged from the existing site may be used provided that it meets the standards as set forth in these specifications. Typically, the depth of topsoil to be salvaged for a given soil type ran be found in the representative soil profile section in the Soil Survey published by USDA- SCS in cooperation with Maryland Agricultural Experimental Station.

II. Topsoil Specifications -- Soil to be used as topsoil must meet the following:
   A. Topsoil shall be a loam, sandy loam, clay loam, silt loam, sandy clay loam, loamy sand. Other soils may be used if recommended by an agronomist or soil scientist and approved by the oporopriate approval authority. Regardless, topsoil shall not be a mixture of contrasting textured subsoils and shall contain less than 5% by volume of cinders, stones, slag, coarse fragments, gravel, sticks, roots, trash, or other materials larger than 1 1/2" in diameter.
   B. Topsoil must be free of plants or plant parts such as bermuda grass, quackgrass, Johnsongrass, nutsedge, poison ivy, thistle, or others as specified.
   C. Where the subsoil is either highly acidic or composed of heavy clays, (ground limestone shall be spread at the rate of 4–8 tons/acre (200–400 pounds per 1,000 square feet) prior to the placement of topsoil. Lime shall be distributed uniformly over designated areas and worked into the soil in conjunction with tillage operations as described in the following procedures.

III. For sites having disturbed areas under 5 acres place topsoil (if required) and apply soil amendments as specified in 20.0 Vegetative Stabilization Methods and Materials.

IV. For sites having disturbed areas over 5 acres:
   A. On soil meeting Topsoil specifications, obtain lest results dictating fertilizer and lime amendments required to bring the soil into compliance with the following:
      1. pH for topsoil shall be between 6.0 and 7.5. If the tested soil demonstrates a pH of less than 6.0, sufficient lime shall be prescribed to raise the pH to 6.5 or higher.
      2. Organic content of topsoil shall be not less than 1.5 percent by weight.
      3. Topsoil having soluble salt content greater than 500 parts per million shall not be used.
      4. No sod or seed shall be placed on soil which has been treated with soil sterilants or chemicals used for weed control until sufficient time has elapsed (14 days min.) to permit dissipation of phyto-toxic materials.

Note: Topsoil substitutes or amendments, as recommends by a qualified agronomist or soil scientist and approved by the appropriate approval authority, may be used in lieu of natural topsoil.

   B. Place topsoil (if required) and apply soil amendments as specified in 20.0 Vegetative Stabilization -- Section I – Vegetative Stabilization Methods and Materials.

V. Topsoil Application
   A. When topsoiling, maintain needed erosion and sediment control practices such as diversions, Grade Stabilization Structures, Earth Dikes, Slope Silt Fence and Sediment Traps and Basins.
      1. Grades on the areas to be topsoiled, which have been previously established, shall be maintained, albeit 4" – 8" higher in elevation.
      2. Topsoil shall be uniformly distributed in a 4" – 8" layer and lightly compacted to a minimum thickness of 4". Spreading shall be performed in such a manner that sodding or seeding can proceed with a minimum of additional soil preparation and tillage. Any irregularities in the surface resulting, from topsoiling or other operations shall be corrected in order to prevent the formation of depressions or water pockets.
      3. Topsoil shall not be placed while the topsoil or subsoil is in a frozen or muddy condition, when the subsoil is excessively wet or in a condition that may otherwise be detrimental to proper grading and seedbed preparation.

   VI. Alternative for Permanent Seeding – Instead of applying the full amounts of lime and commercial fertilizer, composted sludge and amendments may be applied as specified below:

   A. Composted Sludge Material for use as a soil conditioner for sites having disturbed areas over 5 acres shall be tested to prescribe amendments and for sites having disturbed areas under 5 acres shall conform to the following, requirements:
      1. Composted sludge shall be supplied by, or originate from, a person or persons that are permitted (at the time of acquisition of the compost) by the Maryland Department of the Environment under COMAR 26.04.06.
      2. Composted sludge shall contain at least 1 percent nitrogen, 1.5 percent phosphorus, and 0.2 percent potassium and have a Ph of 7.0 to 8.0. If compost does not meet these requirements, the appropriate constituents must be added to meet the requirements prior to use.
      3. Composted sludge shall be applied at a rate of 1 ton/1,000 square feet.
   B. Composted sludge shall be amended with a potassium fertilizer applied at the rate of 4 lb/1,000 square feet, and 1/3 the normal lime application rate.

References: Guideline Specifications, Soil Preparation and Sodding MD–VA, Pub. #1, Cooperative Extension Service, University of Maryland and Virginia Polytechnic Institutes. Revised 1973.

NOTE: LOCATIONS OF STABILIZED CONSTRUCTION ENTRANCES ARE TO BE PREAPPROVED BY THE INSPECTOR PRIOR TO INSTALLATION AND RELOCATION.

DETAIL 1 – EARTH DIKE

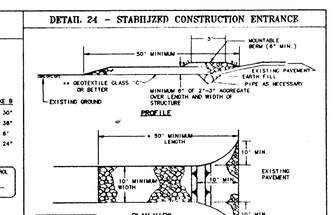
	DIKE A	DIKE B
a-DIKE HEIGHT	18"	30"
b-DIKE WIDTH	24"	36"
c-FLOW WIDTH	4'	6'
d-FLOW DEPTH	12"	24"

1. Seed and cover with straw mulch.
2. Seed and cover with Erosion Control Matting or line with sod.
3. 4" – 7" stone or recycled concrete equivalent pressed into the soil 7" minimum

Construction Specifications

1. All temporary earth dikes shall have uninterrupted positive grade to an outlet. Spot elevations may be necessary for grades less than 1%.
2. Runoff diverted from a disturbed area shall only be conveyed to a sediment trapping device.
3. Runoff diverted from an undisturbed area shall outlet directly into an undisturbed, stabilized area at a non-erosive velocity.
4. All trees, brush, stumps, obstructions, and other objectionol material shall be removed and disposed of so as not to interfere with the proper functioning of the dike.
5. The dike shall be excavated or shaped to line, grade and cross section as required to meet the criteria specified herein. All fill free of bank projections or other irregularities which will impede normal flow.
6. Fill shall be compacted by earth moving equipment.
7. All earth removed and not needed for construction shall be placed so that it will not interfere with the functioning of the dike.
8. Inspection and maintenance must be provided periodically and after each rain event.

DETAIL 24 – STABILIZED CONSTRUCTION ENTRANCE

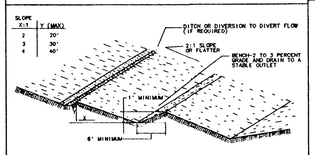


Construction Specification

1. Length – minimum of 50' (*30' for single residence lot).
2. Width – 10' minimum, should be flared at the existing road to provide a turning radius.
3. Geotextile fabric (filter cloth) shall be placed over the existing ground prior to placing stone. **The plan approval authority may not require single family residences to use geotextile.
4. Stone – crushed aggregate (2" to 3") or reclaimed or recycled concrete equivalent shall be placed at least 6" deep over the length and width of the entrance.
5. Surface Water – all surface water flowing to or diverted toward construction entrances shall be piped through the entrance, maintaining positive drainage. Pipe installed through the stabilized construction entrance shall be protected with a mountable berm with 5:1 slopes and a minimum of 6" of stone over the pipe. Pipe has to be sized according to the drainage. When the SCE is located at a high spot and has no drainage to convey a pipe will not be necessary. Pipe should be sized according to the amount of runoff to be conveyed. A 6" minimum will be required.
6. Location – A stabilized construction entrance shall be located at every point where construction traffic enters or leaves a construction site. Vehicles leaving the site must travel over the entire length of the stabilized construction entrance

DETAIL 28 – BENCHED SLOPES

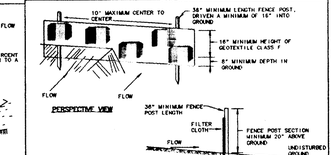
SLOPE X:1	Y (MAX)
2	20'
3	30'
4	40'



Construction Specifications

1. All fills shall be compacted as required to reduce erosion, slippage, settlement, subsidence or other related problems. Fill intended to support buildings, structures and conduits, etc., shall be compacted in accordance with local requirements or codes.
2. All fill shall be placed and compacted in layers not to
3. Except for approved landfills or nonstructural fills, fill material shall be free of brush, rubbish, rocks, logs, stumps, building debris and other objectionable materials that would interfere with or prevent construction of satisfactory fills.
4. Frozen material or soft, mucky or highly compressible materials shall not be incorporated into fill slopes or structural fills. Fill shall not be placed on a frozen foundation.
5. All benches shall be kept free of sediment during all phases of development.
6. Seeps or springs encountered during construction shall be handled in accordance with the Standard and Specification for Subsurface Drain or other suitable methods.
7. All graded areas shall be permanently stabilized immediately following finished grading.

DETAIL 22 – SILT FENCE



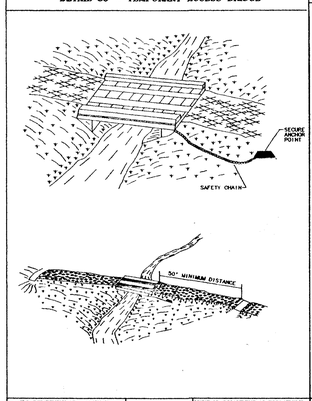
Construction Specifications

1. Fence posts shall be a minimum of 36" long driven 16" minimum into the ground. Wood posts shall be 1"/2" x 1"/2" square (minimum) cut, or 1"/4" diameter (minimum) round and shall be of sound quality hardwood. Steel posts will be standard T or U section weighting not less than 1.00 pond per linear foot.
2. Geotextile shall be fastened securely to each fence post with wire ties or staples at top and mid-section and shall meet the following requirements for Geotextile Class F:

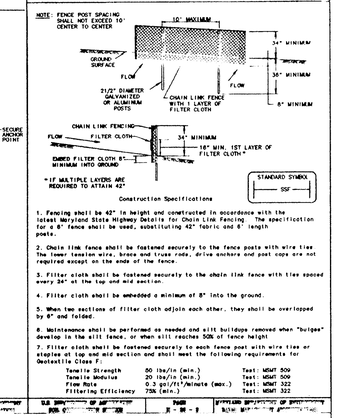
Tensile Strength	50 lbs/in (min.)	Test: MSMT 509
Tensile Modulus	20 lbs/in (min.)	Test: MSMT 509
Flow Rate	0.3 gal/ft²/minute (max.)	Test: MSMT 322
Filtering Efficiency	75% (min.)	Test: MSMT 322

3. Where ends of geotextile fabric come together, they shall be overlapped, folded and stapled to prevent sediment bypass.
4. Silt fence shall be inspected after each rainfall event and maintained when bulges occur or when sediment accumulation reached 50% of the fabric height.

DETAIL 35 – TEMPORARY ACCESS BRIDGE



DETAIL 33 – SUPER SILT FENCE



Construction Specifications

1. Fencing shall be 42" in height and constructed in accordance with the latest Maryland State Highway Details for Chain Link Fencing. The specification for a 6' fence shall be used, substituting 42" fabric and 8' length posts.
2. Chain link fence shall be fastened securely to the fence posts with wire ties. The lower tension wire, brace and truss rods, drive anchors and post caps are not required except at the ends of the fence.
3. Filter cloth shall be fastened securely to the chain link fence with ties spaced every 24" at the top and mid section.
4. Filter cloth shall be embedded a minimum of 8" into the ground.
5. When two sections of filter cloth adjoin each other, they shall be overlapped by 6" and folded.
6. Maintenance shall be performed as needed and silt buildups removed when "bulges" develop in the silt fence, or when silt reaches 50% of fence height.
7. Filter cloth shall be fastened securely to each fence post with wire ties or staples at top and mid section and shall meet the following requirements for Geotextile Class F:

Tensile Strength	50 lbs/in (min.)	Test: MSMT 509
Tensile Modulus	20 lbs/in (min.)	Test: MSMT 509
Flow Rate	0.3 gal/ft²/minute (max.)	Test: MSMT 322
Filtering Efficiency	75% (min.)	Test: MSMT 322

DETAILS 24, 22, AND 33 TO BE USED AT THE DISCRETION OF THE CONTRACTOR. And the Howard County Sediment and Erosion Control Inspector.

I. DESCRIPTION

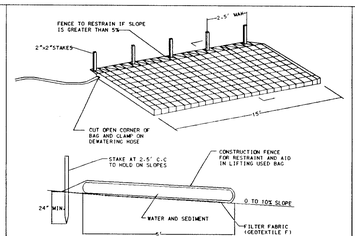
THIS WORK SHALL CONSIST OF DEPRESSING IN STREAM CULVERTS ONE FOOT BELOW THE NATURAL STREAM INVERT TO ENCOURAGE CHANNELIZATION AND TO ALLOW WATER TO POOL AND DEPOSIT SEDIMENTS. THUS IMPROVING FISH PASSAGE. IN THE EVENT OF A STORM, ALL SEDIMENT WILL BE WASHED AWAY, INSURING THE EFFECTIVENESS AND INTEGRITY OF THE CULVERT.

II. CONSTRUCTION REQUIREMENTS

THE CONSTRUCTION OF THE DEPRESSED CULVERT SHALL BE THE SAME AS FOR A STANDARD CULVERT. IN THE CASE OF DOUBLE OR TRIPLE-CELLED CULVERTS, ONLY ONE OR TWO CULVERTS SHALL BE DEPRESSED AS NECESSARY. STREAMS WITH HIGH SLOPE GRADIENTS MAY NOT BE SUITABLE FOR DEPRESSED CULVERTS BECAUSE INCREASED VELOCITIES MAY SCOUR THE BOTTOM AND RESTRICT SEDIMENTATION.

approved otherwise by the Administration.

WATER RESOURCES ADMINISTRATION	DEPRESSED CULVERT	Approved On 1/4/84 Chief, Waterway Permits	WPD 5.3



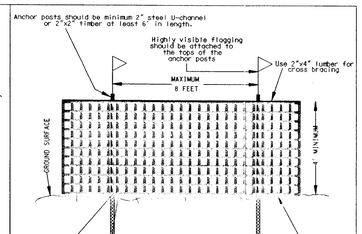
SECTION

NOTES:

1. FILTER BAG SHALL BE PLACED ON A SLOPING OR LEVEL, WELL GRADED VEGITATED SITE SUCH THAT WATER WILL FLOW AWAY FROM DEVICE AND ANY WORK AREAS.
2. WIDTH AND LENGTH SHALL BE AS SHOWN.
3. THE FILTER BAG MUST BE STAKED IN PLACE AND SECURE TO THE PUMP DISCHARGE LINE.
4. FILTER BAG SHALL NOT BE USED FOR DISCHARGE FLOWS GREATER THAN 300 GPM.
5. DEVICE SHALL BE REMOVED AND DISPOSED OF AFTER BAG IS FILLED WITH SEDIMENT. SEDIMENT FROM BAG SHALL BE SPREAD IN AN UPLAND AREA.
6. FILTER FABRIC SHALL MEET THE FOLLOWING REQUIREMENTS FOR GEOTEXTILE CLASS "F":

TENSILE STRENGTH	50 lbs./in. (min)	TEST: MSMT 509
TENSILE MODULUS	20 lbs./in. (min.)	TEST: MSMT 509
FLOW RATE	0.3 gal./ft²/minute (max)	TESTS: MSMT 322
FILTERING EFFICIENCY	75% (min.)	TESTS: MSMT 322

WATER RESOURCES ADMINISTRATION	FILTER BAG TEMPORARY EROSION CONTROL MEASURE	Approved On 1/4/84 Chief, Waterway Permits	WPD FB



GENERAL NOTES

1. Limits of disturbance will be set as part of the review process for an approved TCP.
2. The boundaries of the limits of disturbance should be staked and flagged prior to erecting the protective device.
3. Anchor posts should be placed to avoid severing or damaging large tree roots.
4. Fencing material should be fastened securely to the anchor posts, cross bracing, and ground.

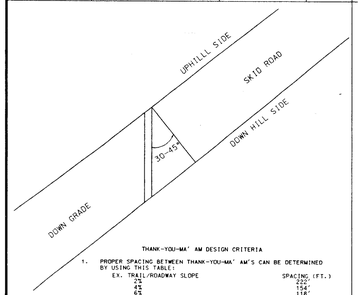
TREE PROTECTIVE DEVICE
BLAZE ORANGE PLASTIC MESH

TPD-O
OPTION 1



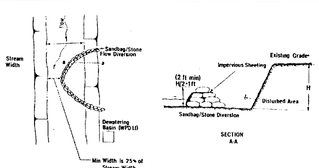
THANK-YOU-MA' AM DESIGN CRITERIA

1. PROPER SPACING BETWEEN THANK-YOU-MA' AM'S CAN BE DETERMINED BY USING THIS TABLE:

EX. TRAIL/ROADWAY SLOPE	SPACING (FT.)
2%	250'
5%	134'
10%	73'
15%	50'

2. INSTALLATION SHALL BE AT AN ANGLE OF 30 DEGREES DOWN SLOPE OR MORE TO TURN SURFACE WATER OFF THE ROAD OR TRAIL.
3. A SHALLOW TRENCH SHALL BE DUG 4 TO 12 INCHES BELOW THE SURFACE OF THE ROAD OR TRAIL AND EXTEND 2 FT. BEYOND BOTH SIDES.
4. THE OVERFLOW END OF THE BAR SHALL BE FULLY OPEN AND EXTENDED FAR ENOUGH BEYOND THE EDGE OF THE ROAD OR TRAIL TO SAFELY DISPERSE RUNOFF WATER ONTO THE UNDISTURBED FOREST FLOOR.

WATER RESOURCES ADMINISTRATION	THANK-YOU-MA'AM TYPE WATER BAY CONSTRUCTION FOR SKID ROADS	Approved On 1/4/84 Chief, Waterway Permits	WPD TYM



I. Description
The work shall consist of installing a flow diversion for the purpose of erosion control when construction activities take place within the stream channel such as bank stabilization or bridge abutment construction.

II. Material Specifications
1. Sandbags: Sandbags shall consist of materials which are resistant to ultra-violet radiation, tearing and puncture and woven tightly enough to prevent leakage of fill material (i.e., sand, fine gravel, etc.).
2. Stones: Stone shall be washed and have a minimum diameter of 6 inches.
3. Sheeting: Sheeting shall consist of polyethylene or other material which is impervious and resistant to puncture and tearing.

III. Construction Requirements
1. All erosion and sediment control devices shall be installed as the first order of work.
2. The diversion structure shall be installed form upstream to downstream.
3. The height of the diversion structure shall be one half the distance from stream bed to stream bank plus one foot, as indicated on the cross-section view.
4. All excavated materials shall be disposed of in a sod approved disposal area outside the 100-year floodplain unless otherwise approved on the plans by the WRA.
5. All areas disturbed by construction shall be purged to a dewatering basin prior to removing the structure in sufficient size to
6. Sheeting shall be overlapped such that the upstream portion covers the downstream portion with at least a 18-inch overlap.
7. Sediment control devices are to remain in place until all disturbed areas are stabilized in accordance with an approved sediment and erosion control plan and the inspecting authority approves their removal.

WATER RESOURCES ADMINISTRATION	Sandbag/Stone Diversion	Approved On 1/4/84 Chief, Waterway Permits	WPD 2.3

GENERAL NOTES:

1. SPECIFICATIONS:
MD. STATE SPECIFICATIONS FOR CONSTRUCTION AND MATERIAL, THE BOCA NATIONAL BUILDING CODE/1987, TENTH EDITION, BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE, (ACI 318-83, REVISED, 1986)

2. DESIGN LOADS:
THE BOARDWALK DECK AND FRAMING HAS EEEN DESIGNED FOR THE FOLLOWING LIVE LOAD: 100 P.S.F.

3. CONCRETE:
CONCRETE FOR VERTICAL PIER ENCASEMENT SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3,000 P.S.I. AT TWENTY-EIGHT (28) DAYS.

4. TIMBER:
ALL LUMBER SIZES AND LUMBER DIMENSIONS ARE NOMINAL. ALL LUMBER TO MEET OR EXCEED THE GRADES ESTABLISHED IN THE SPECIFICATIONS. ALL TIMBER BEAMS, JOISTS, DECKING AND POSTS SHALL BE SOUTHERN PINE NO. 1 OR BETTER, AND SHALL BE PRESSURE TREATED TO THE RETENTION VALUES LISTED BELOW IN LBS. PER CUBIC FEET:
-SUPERSTRUCTURE, 1.0
-DECK SURFACES, 0.6.
ALL BOLTS IN TIMBER SHALL BE INSTALLED WITH A 3" MINIMUM EDGE AND END DISTANCE, UNLESS NOTED OTHERWISE. INSTALL SOLID BLOCKING BETWEEN JOISTS AT ALL BEAMS AND RAIL POST LOCATIONS. ALL BOLTS IN TIMBER SHALL BE ¾" DIAMETER ASTM A-307, UNLESS NOTED OTHERWISE. ALL MULTIPLE "2x" BEAMS AND JOISTS SHALL BE FASTENED WITH ¾" DIAMETER BOLTS @ 16"o.c., STAGGERED TOP AND BOTTOM. NAIL SIZE AND SPACING SHALL BE IN ACCORDANCE WITH APPENDIX "C" OF THE BOCA NATIONAL BUILDING CODE/1987.

5. MISCELLANEOUS METALS:
ALL METAL FASTENERS, CONNECTORS AND BOLTS FOR TIMBER CONSTRUCTION SHALL BE HOT-DIPPED GALVANIZED STEEL. METAL FABRICATIONS SHALL BE GALVANIZED AFTER WELDING AND MACHINING.

GENERAL NOTES:

1. SPECIFICATIONS:
MD. STATE SPECIFICATIONS FOR CONSTRUCTION AND MATERIAL, THE BOCA NATIONAL BUILDING CODE/1987, TENTH EDITION, BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE, (ACI 318-83, REVISED, 1986)

2. DESIGN LOADS:
THE BOARDWALK DECK AND FRAMING HAS BEEN DESIGNED FOR THE FOLLOWING LIVE LOAD: 100 P.S.F.

3. CONCRETE:
CONCRETE FOR VERTICAL PIER ENCASEMENT SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3,000 P.S.I. AT TWENTY-EIGHT (28) DAYS.

4. TIMBER:
ALL LUMBER SIZES AND LUMBER DIMENSIONS ARE NOMINAL. ALL LUMBER TO MEET OR EXCEED THE GRADES ESTABLISHED IN THE SPECIFICATIONS. ALL TIMBER BEAMS, JOISTS, DECKING AND POSTS SHALL BE SOUTHERN PINE NO. 1 OR BETTER, AND SHALL BE PRESSURE TREATED TO THE RETENTION VALUES LISTED BELOW IN LBS. PER CUBIC FEET:
-SUPERSTRUCTURE, 1.0
-DECK SURFACES, 0.6.
ALL BOLTS IN TIMBER SHALL BE INSTALLED WITH A 3" MINIMUM EDGE AND END DISTANCE, UNLESS NOTED OTHERWISE. INSTALL SOLID BLOCKING BETWEEN JOISTS AT ALL BEAMS AND RAIL POST LOCATIONS. ALL BOLTS IN TIMBER SHALL BE ¾" DIAMETER ASTM A-307, UNLESS NOTED OTHERWISE. ALL MULTIPLE "2x" BEAMS AND JOISTS SHALL BE FASTENED WITH ¾" DIAMETER BOLTS @ 16"o.c., STAGGERED TOP AND BOTTOM. NAIL SIZE AND SPACING SHALL BE IN ACCORDANCE WITH APPENDIX "C" OF THE BOCA NATIONAL BUILDING CODE/1987.

5. MISCELLANEOUS METALS: HOT DIPPED
ALL METAL FASTENERS, CONNECTORS AND BOLTS FOR TIMBER CONSTRUCTION SHALL BE HOT-GALVANIZED STEEL. METAL FABRICATIONS SHALL BE GALVANIZED AFTER WELDING AND MACHINING. IF THE GALVANIZING IS REMOVED DURING ASSEMBLY, COLD GALVANIZING SHALL BE NEATLY APPLIED TO ALL EXPOSED AREAS.

GENERAL NOTES

1. COORDINATES SHOWN HEREON ARE BASED ON HOWARD COUNTY GEODETIC SYSTEM POINT NOS. 2241004, 2241011 & 2341002. NAD 27 DATUM
2. CONTRACTOR SHALL LOCATE EXISTING UTILITIES A MINIMUM OF TWO (2) WEEKS IN ADVANCE OF CONSTRUCTION OPERATIONS IN THE VICINITY OF PROPOSED UTILITIES AT NO COST TO THE COUNTY THEN IF DIRECTED BY THE ENGINEER, TEST PITS SHALL BE DUG AT UTILITY CROSSINGS TO DETERMINE EXISTING HORIZONTAL AND VERTICAL ALIGNMENT OF UTILITIES.
3. CONTRACTOR SHALL NOTIFY THE FOLLOWING UTILITIES OR AGENCIES AT LEAST FIVE (5) WORKING DAYS BEFORE STARTING WORK SHOWN ON THESE PLANS:

   MISS UTILITY 1-800-257-7777
   CONSTRUCTION INSPECTION DIVISION, HOWARD COUNTY (410) 313-1880
   STATE HIGHWAY ADMINISTRATION (410) 531-5533
   BALTIMORE GAS & ELECTRIC COMPANY - UNDERGROUND ELECTRIC
   DISTRIBUTION CUSTOMER SERVICE (410) 685-0123
   ENGINEERING DAMAGE CONTROL (410) 234-5621
   BELL ATLANTIC TELEPHONE 1-800-870-0000
   AMERICAN TELEPHONE & TELEGRAPH CABLE LOCATION DIVISION (410) 393-3553
   COLONIAL PIPELINE COMPANY (410) 781-4641
   BUREAU OF UTILITIES, HOWARD COUNTY (410) 313-4900
4. AVOID DAMAGE TO TREES ON THE PATHWAY TO MAXIMUM EXTENT. OTHER TREES WITHIN LIMITS OF CONSTRUCTION SHALL NOT BE DESTROYED WITHOUT APPROVAL OF THE ENGINEER. TREES > 12"Ø WITHIN 5' OF LOD WILL BE PROTECTED BY TREE PROTECTIVE FENCING.
5. CONTRACTOR SHALL REMOVE TREES, STUMPS, AND ROOT ALONG LINE OF EXCAVATION AS DIRECTED BY THE ENGINEER. PAYMENT FOR SUCH REMOVAL SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR CLEARING AND GRUBBING. CARE SHALL BE TAKEN TO AVOID DISTURBANCE OF EXISTING TREES TO REMAIN
6. PLACE REGULATION WARNING SIGNS AS REQUIRED TO COMPLY WITH MARYLAND STATE HIGHWAY ADMINISTRATION MANUAL OF TRAFFIC CONTROL FOR HIGHWAY CONSTRUCTION AND MAINTENANCE OPERATIONS. PAYMENT FOR THIS ITEM SHALL BE INCIDENTAL TO OTHER BID ITEMS. ALL STREET AND REGULATORY SIGNS SHALL BE IN PLACE PRIOR TO ANY ASPHALT PAVING. NO TRAFFIC STUDY IS REQUIRED.
7. ALL GRADING SHALL BE LIMITED TO 16' R.O.W. INCLUDING SIDE SLOPES AND STABILIZATION (EXCEPT WHERE LOD INDICATES A WIDER AREA). FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED AS FOLLOWS:
   A. SEVEN (7) CALENDAR DAYS FOR THE SURFACE OF ALL PERIMETER CONTROLS, DIKES, SWALES, DITCHES, PERIMETER SLOPES, AND ALL SLOPES, AND ALL SLOPES GREATER THAN THREE HORIZONTAL TO ONE VERTICAL (3:1); AND
   B. FOURTEEN (14) CALENDAR DAYS FOR ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.
8. FOR DETAILS NOT SHOWN ON THESE DRAWINGS, AND FOR MATERIALS AND CONSTRUCTION METHODS, THE CONTRACTOR SHALL ABIDE BY THE MARYLAND STATE HIGHWAY ADMINISTRATION'S "BOOK OF STANDARDS FOR HIGHWAY AND INCIDENTAL STRUCTURES," "STANDARD SPECIFICATIONS FOR CONSTRUCTION AND MATERIALS" AND THE SPECIAL PROVISIONS. IN THE EVENT OF ANY DISCREPANCY BETWEEN THESE SOURCES, THE SPECIAL PROVISIONS SHALL GOVERN.
9. ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF HOWARD COUNTY PLUS MSHA STANDARDS AND SPECIFICATIONS IF APPLICABLE.
10. THE PATHWAY SHALL BE MAINTAINED AFTER CONSTRUCTION BY THE HOWARD COUNTY DEPARTMENT OF RECREATION AND PARK
11. UNLESS INDICATED OTHERWISE NEW PATHWAY SHALL NOT EXCEED 5% SLOPE

This Project is exempt from the obligations of the Forest Conservation Program because it is on New Town zoned land, a planned unit development, substantially developed before Dec 31, 1992.

RIGHT-OF-WAY LINES SHOWN ON THESE PLANS DO NOT INCLUDE EASEMENTS. THEY ARE FOR ASSISTANCE IN INTERPRETING THE PLANS. THEY ARE NOT FOR OFFICIAL FEE RIGHT-OF-WAY AND EASEMENT INFORMATION. SEE APPROPRIATE RIGHT-OF-WAY PLAT OR PLATS.

THE LOCATIONS OF EXISTING UTILITIES SHOWN ON THE PLANS ARE FOR INFORMATION AND GUIDANCE ONLY. NO GUARANTEE IS MADE AS TO THE ACCURACY OF SAID LOCATIONS. CALL "MISS UTILITY", 1-800-257-7777 FOR UTILITY LOCATIONS AT LEAST 48 HOURS BEFORE BEGINNING CONSTRUCTION.

Fee-in-lieu of Storm Water Management Approval was granted on

U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE	PAGE F - 18 - 8	MARYLAND DEPARTMENT OF ENVIRONMENT WATER MANAGEMENT ADMINISTRATION

ROCK OUTLET PROTECTION

Construction Specifications

1. The subgrade for the filter, rip-rap, or gabion shall be prepared to the required lines and grades. Any fill required in the subgrade shall be compacted to a density of approximately that of the surrounding undisturbed material.

2. The rock or gravel shall conform to the specified grading limits when installed respectively in the rip-rap or filter.

3. Geotextile shall be protected from punching, cutting, or tearing. Any damage other than an occasional small hole shall be repaired by placing another piece of geotextile over the damaged part or by completely replacing the geotextile. All overlaps whether for repairs or for joining two pieces of geotextile shall be a minimum of one foot.

4. Stone for the rip-rap or gabion outlets may be placed by equipment. They shall be constructed to the full course thickness in one operation and in such a manner as to avoid displacement of underlying materials. The stone for rip-rap or gabion outlets shall be delivered and placed in a manner that will ensure that it is reasonably homogeneous with the smaller stones and spalls filling the voids between the larger stones. Rip-rap shall be placed in a manner to prevent damage to the filter blanket or geotextile. Hand placement will be required to the extent necessary to prevent damage to the permanent works.

5. The stone shall be placed so that it blends in with the existing ground. If the stone is placed too high then the flow will be forced out of the channel and scour adjacent to the stone will occur.

19.0 STANDARDS AND SPECIFICATIONS FOR LAND GRADING

Design Criteria

The grading plan should be based upon the incorporation of building designs and street layouts that fit and utilize existing topography and desirable natural surroundings to avoid extreme grade modifications. Information submitted must provide sufficient topographic surveys and soil investigations to determine limitations that must be imposed on the grading operation related to slope stability, effect on adjacent properties and drainage patterns, measures for drainage and water removal and vegetative treatment, etc.

Many counties have regulations and design procedures already established for land grading and cut and fill slopes. Where these requirements exist, they shall be followed. The plan must show existing and proposed contours of the area(s) to be graded. The plan shall also include practices for erosion control, slope stabilization, safe disposal of runoff water and drainage, such as waterways, lined ditches, reverse slope benches (include grade and cross section), grade stabilization structures, retaining walls, and surface and subsurface drains. The plan shall also include phasing of these practices. The following shall be incorporated into the plan:

I. Provisions shall be made to safely conduct surface runoff to storm drains, protected outlets or to stable water courses to insure that surface runoff will not damage slopes or other graded

II. Cut and fill slopes that are to be stabilized with grasses shall not be steeper than 2:1. (Where the slope is to be mowed the slope should be no steeper than 3:1; 4:1 is preferred because of safety factors related to mowing steep slopes.) Slopes exceeding 2:1 shall require special design and stabilization considerations that shall be adequately shown on the plans.

III. Reverse benches shall be provided whenever the vertical interval (height) of any 2:1 slope exceeds 20 feet; for 3:1 slope it shall be increased to 30 feet and for 4:1 to 40 feet. Benches shall be located to divide the slope face as equally as possible and shall convey the water to a stable outlet. Soils, seeps, rock outcrops, etc., shall also be taken into consideration when designing benches.

A. Benches shall be a minimum of six-feet wide to provide for ease of maintenance.

B. Benches shall be designed with a reverse slope of 6:1 or flatter to the toe of the upper slope and with a minimum of one foot in depth. Bench gradient to the outlet shall be between 2 percent and 3 percent, unless accompanied by appropriate design and computations.

C. The flow length within a bench shall not exceed 800' unless accompanied by appropriate design and computations. For flow channel stabilization see temporary

IV. Surface water shall be diverted from the face of all cut and/or fill slopes by the use of earth dikes, ditches and swales or conveyed downslope by the use of a designed structure, except

A. The face of the slope is or shall be stabilized and the face of all graded slopes shall be protected from surface runoff until they are stabilized.

B. The face of the slope shall not be subject to any concentrated flows of surface water such as from natural drainageways, graded swales, downspouts, etc.

C. The face of the slope will be protected by special erosion control materials, to include, but not limited to: approved vegetative stabilization practices (see section G), rip-rap or other approved stabilization methods.

V. Cut slopes occurring in ripable rock shall be serrated as shown on the following diagram. These serrations shall be made with conventional equipment as the excavation is made. Each step or serration shall be constructed on the contour and will have steps cut at nominal two-foot intervals with nominal three-foot horizontal shelves. These steps will vary depending on the slope ratio or the cut slope. The nominal slope line is 1:1. These steps will weather and act to hold moisture, lime, fertilizer and seed thus producing a much quicker and longer lived vegetative cover and better slope stabilization. Overland flow shall be diverted from the top of all serrated cut slopes and carries to a suitable outlet.

VI. Subsurface drainage shall be provided where necessary to intercept seepage that would otherwise adversely affect slope stability or create excessively wet site conditions.

VII. Slopes shall not be created so close to property lines as to endanger adjoining properties without adequately protecting such properties against sedimentation, erosion, slippage, settlement, subsidence or other related damages.

VIII. Fill material shall be free of brush, rubbish, rocks, logs, stumps, building debris, and other objectionable material. It should be free of stones over two (2) inches in diameter where compacted by hand or mechanical tampers or over eight (8) inches in diameter where compacted by rollers or other equipment. Frozen material shall not be placed in the fill nor shall the fill material be placed on a frozen foundation.

IX. Stockpiles, borrow areas and spoil shall be shown on the plans and shall be subject to the provisions of this Standard and Specifications.

X. All disturbed areas shall be stabilized structurally or vegetatively in compliance with 20.0 Standards and Specifications for Vegetative Stabilization.

SEQUENCE OF CONSTRUCTION*

Number of days		
	1.	Contact the oward County Sediment Control Inspector 48 hours prior to start Of work. I orm the inspector of the starting date.
3 days	2.	Stabilized construction entrances to be installed at all access points to the path.
5 days	3.	Contractor shall stake out entire length of project prior to any clearing and grubbing. The proposed pathway alignment shall be approved by Howard County DPW prior to construction.
224 days	4.	Contractor to construct the path in 100 l.f. segments. Each segment to be stabilized with graded aggregate sub-base and seed & mulch immediately. Contractor shall gain permission from Sediment control Inspector prior to the start of the next segment **
5 days	5.	Wood chips from cleared trees to be used to stabilize the disturbed areas in the wooded sections of the path. Seed, mulch, and curlex to be used on the sections of the path exposed to sunlight. Shady Seed mix shall be used in all Shaded Areas. *
3 days	6.	Remove all sediment and erosion control measures after acquiring approval from Howard County SCD Inspector.

* Wetland Seed Mix to be installed in Wetland Areas.

** "Thank-You-Ma'am" Shall be installed in all Sloped areas, See Detail Sh. 7

Total Days 240

Note: Before work begins, the contractor shall place protective tree fence around all trees > 12" diameter within 5' of L.O.D using the detail on sheet 7.

Wetland Seed Mix Table For Turf Establishment

Botanical Name	Common Name	Percent of Seed Mix	Purity Percent Min.	Weedseed Percent Max.	Germanation Percent Min.
Poa Trivialis L.	Rough Stalk Bluegrass	10	90	1	80
Agrostis Albo L.	Red Top	30	90	1	80
Lolium Species	Annual Ryegrass	30	90	1	80
Panicum Virgatum L.	Switch Grass	30	90	1	80

Note:
- Application rate shall be 120 lbs/Acre.
- Seed mix percentages are based upon weight.
- This seed mix will be used in areas that are delineated as wetlands on the Construction Documents unless otherwise directed by the engineer.
- Seeds shall be mixed offsite and delivered throughly mixed.
- This mix is to be used for temporary seeding when directed by the engineer.

Seed Mix Table For Turf Establishment In Shaded areas

Common Name	Percent of Seed Mix	Purity Percent Min.	Weedseed Percent Max.	Germanation Percent Min.
Shadow chewing fescue or other improved chewing fescue	30	90	1	80
Aurora hard fescue or other improved hard fescue	30	90	1	80
Flyer creeping red fescue or other creeping red fescue	20	90	1	80
Glade kentucky bluegrass or improved kentucky bluegrass	10	90	1	80
Manhattan II, Affinity or other improved perenial ryegrass	10	90	1	80

Note:
- Application rate shall be 20 lbs/Acre.
- Seed mix percentages are based upon weight.
- This seed mix will supersede any other permanent seed mixture listed in the Contract Documents unless otherwise allowed by the engineer.
- Seeds shall be mixed offsite and delivered throughly mixed.
- This mix is to be used for temporary seeding when directed by the engineer.

HOWARD SOIL CONSERVATION DISTRICT

PERMANENT SEEDING NOTES

Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, disking or other acceptable means before seeding, if not previously loosened.

Soil Amendments: In lieu of soil test recommendations, use one of the following schedules:
1. Preferred – Apply 2 tons/acres dolomitic limestone (92 lbs/1000 sq. ft.) And 600 lbs/acre 10-10-10 fertilizer (14 lbs/1000 sq. ft.) before seeding. Harrow or disk into upper three inches of soil. At time of seeding, apply 400 lbs/acre 30-0-0 ureaform fertilizer (9 lbs/1000 sq. ft.)
2. Acceptable – Apply 2 tons/acres dolomitic limestone (92 lbs/1000 sq. ft.)and 1000 lbs/acre 10-10-10 fertilizer (23 lbs/1000 sq. ft.) Before seeding. Harrow or disk into upper three inches of soil.

Seeding: For the periods March 1 – April 30, and August 1 – October 15, seed with 60 lbs/acres (1.4 lbs/1000 sq. ft.) Of Kentucky 31 Tall Fescue per acres and 2 lbs/acre (0.05 lbs/1000 sq. ft.) Of weeping lovegrass. During the period of October 16 – February 28, protect site by:
Option 1 – Two tons per acres of well anchored straw mulch and seed as soon as possible in the spring.
Option 2 – use sod.
Option 3 – seed with 60 lbs/acres Kentucky 30 tall fescue and mulch with 2 tons/acre well anchored straw.

Mulching: Apply 1-1/2 to 2 tons per acre (70 – 90 lbs/1000 sq. ft.)of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq. ft.) of emulsified asphalt on flat areas. On slope 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq. ft.) for anchoring.

Maintenance: Inspect all seeding areas and make needed repairs, replacements and reseedings.

TEMPORARY SEEDING NOTES

Apply to graded or cleared areas likely to be re-disturbed where a short-term vegetative cover is needed.

Seedbed Preparation: Loosen upper three inches of soil by raking, disking or other acceptable means before seeding, if not previously loosened.

Soil Amendments: Apply 600 lbs/acre 10-10-10 fertilizer (14 lbs/1000 sq. ft.)

Seeding: For periods March 1 – April 30 and from August 15 – October 15, seed with 2-1/2 bushel per acre of annual rye (3.2 lbs/1000 sq. ft.). For the period May 1 – August 14, seed with 3 lbs/acre of weeping lovegrass (0.07 lbs/1000 lbs/sq. ft.). For the period November 16 – February 28, protect site by applying 2 tons/acre of well anchored straw mulch and seed as soon as possible in the spring. or use sod.

Mulching: Apply 1-1/2 to 2 tons per acre (70 – 90 lbs/1000 sq. ft.)of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq. ft.) of emulsified asphalt on flat areas. On slope 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq. ft.) for anchoring.

HOWARD SOIL CONSERVATION DISTRICT

STANDARD SEDIMENT CONTROL NOTES

1. A minimum of 48 hours notice must be given to the Howard County Department of Inspections, Licenses and Permits, Sediment Control Division prior to start of any construction (313-1855).
2. All vegetative and structural practices are to be installed according to the provisions of this plan and are to be in conformance with the 1994 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL and revisions thereto.
3. Following initial soil disturbance or re-disturbance, permanent or temporary stabilization shall be completed within:
   A) 7 calender days for all perimeter sediment control structures, dikes, perimeter slopes and all slopes steeper than 3:1.
   B) 14 calender days as to all other disturbed or graded areas on the project site.
4. All sediment traps/basins shown must be fenced and warning signs posted around their perimeter in accordance with Vol. 1, Chapter 7 of the HOWARD COUNTY DESIGN MANUAL, Storm drainage.
5. All disturbed areas must be stabilized within the time period specified above in accordance with the 1994 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for permanent seeding, sod, temporary seeding and mulching (section g). Temporary stabilization with mulch alone shall only be done when recommended seeding dates do not allow for proper germination and establishment of grasses.
6. All sediment control structures are to remain in place and are to be maintained in operative condition until permission for there removal has been obtained from the Howard County Sediment Control Inspector.
7. Site Analysis:

Total Area of Site	=	1.1 Acres
Area Disturbed	=	1.1 Acres
Area to be Roofed or Paved	=	.54 Acres
Area to be Vegetatively Stabilized	=	.55 Acres
Total Cut	=	300 Cu. Yds.
Total Fill	=	300 Cu. Yds.
Offsite waste/borrow area location		TO BE DETERMINED BY THE CONTRACTOR

* A site with a current active grading permit is needed for offsite waste/borrow

8. Any sediment control practice which is disturbed by grading activity for placement of utilities must be repaired on the same day of disturbance.
9. Additional sediment control must be provided, if deemed necessary by the Howard County Sediment Control Inspector.
10. On all sites with disturbed areas in excess of 2 acres, approval of the inspection agency shall be requested upon completion of installation of perimeter erosion and sediment controls, but before proceeding with any other earth disturbance or grading. Other building or grading inspection approvals may not be authorized until this initial approval by the inspection agency is made.
11. Trenches for the construction of utilities is limited to three pipe lengths or that which shall be back-filled and stabilized within one working day, whichever is shorter.

21.0 STANDARD AND SPECIFICATIONS FOR TOPSOIL

Definition

Placement of topsoil over a prepared subsoil prior to establishment of permanent vegetation.

Purpose

To provide a suitable soil medium for vegetative growth. Soils of concern have low moisture content, low nutrient levels, low pH, materials toxic to plants, and/or unacceptable soil gradation.

Conditions Where Practice Applies

I. This practice is limited to areas having 2:1 or flatter slopes where:

A. The texture of the exposed subsoil/parent material is not adequate to produce vegetative growth.

B. The soil material is so shallow that the rooting zone is not deep enough to support plants or furnish continuing supplies of moisture and plant nutrients.

C. The original soil to be vegetated contains material toxic to plant growth.

D. The soil is so acidic that treatment with limestone is not feasible.

II. For the purpose of these Standards and Specifications, areas having slopes steeper than 2:1 require special consideration and design for adequate stabilization. Areas having slopes steeper than 2:1 shall have the appropriate stabilization shown on the plans.

Construction and Material Specifications

I. Topsoil salvaged from the existing site may be used provided that it meets the standards as set forth in these specifications. Typically, the depth of topsoil to be salvaged for a given soil type ran be found in the representative soil profile section in the Soil Survey published by USDA-SCS in cooperation with Maryland Agricultural Experimental Station.

II. Topsoil Specifications – Soil to be used as topsoil must meet the following:

A. Topsoil shall be a loam, sandy loam, clay loam, silt loam, sandy clay loam, loamy sand. Other soils may be used if recommended by an agronomist or soil scientist and approved by the appropriate approval authority. Regardless, topsoil shall not be a mixture of contrasting textured subsoils and shall contain less than 5% by volume of cinders, stones, slag, coarse fragments, gravel, sticks, roots, trash, or other materials larger than 1 1/2" in diameter.

B. Topsoil must be free of plants or plant parts such as bermuda grass, quackgrass, Johnsongrass, nutsedge, poison ivy, thistle, or others as specified.

C. Where the subsoil is either highly acidic or composed of heavy clays, (ground limestone shall be spread at the rate of 4-8 tons/acre (200-400 pounds per 1,000 square feet) prior to the placement of topsoil. Lime shall be distributed uniformly over designated areas and worked into the soil in conjunction with tillage operations as described in the following procedures.

III. For sites having disturbed areas under 5 acres place topsoil (if required) and apply soil amendments as specified in 20.0 Vegetative Stabilization – Section I – Vegetative Stabilization Methods and Materials.

IV. For sites having disturbed areas over 5 acres:

A. On soil meeting Topsoil specifications, obtain test results dictating fertilizer and lime amendments required to bring the soil into compliance with the following:

1. pH for topsoil shall be between 6.0 and 7.5. If the tested soil demonstrates a pH of less than 6.0, sufficient lime shall be prescribed to raise the pH to 6.5 or higher.
2. Organic content of topsoil shall be not less than 1.5 percent by weight.
3. Topsoil having soluble salt content greater than 500 parts per million shall not be used.
4. No sod or seed shall be placed on soil which has been treated with soil sterilants or chemicals used for weed control until sufficient time has elapsed (14 days min.) to permit dissipation of phyto-toxic materials,

Note: Topsoil substitutes or amendments, as recommends by a qualified agronomist or soil scientist and approved by the appropriate approval authority, may be used in lieu of natural topsoil.

B. Place topsoil (if required) and apply soil amendments as specified in 20.0 Vegetative Stabilization – Section I – Vegetative Stabilization Methods and Materials.

V. Topsoil Application

A. When topsoiling, maintain needed erosion and sediment control practices such as diversions, Grade Stabilization Structures, Earth Dikes, Slope Silt Fence and Sediment Traps and Basins.

1. Grades on the areas to be topsoiled, which have been previously established, shall be maintained, albeit 4" – 8" higher in elevation.
2. Topsoil shall be uniformly distributed in a 4" – 8" layer and lightly compacted to a minimum thickness of 4". Spreading shall be performed in such a manner that sodding or seeding can proceed with a minimum of additional soil preparation and tillage. Any irregularities in the surface resulting, from topsoiling or other operations shall be corrected in order to prevent the formation of depressions or water pockets.
3. Topsoil shall not be placed while the topsoil or subsoil is in a frozen or muddy condition, when the subsoil is excessively wet or in a condition that may otherwise be detrimental to proper grading and seedbed preparation.

VI. Alternative for Permanent Seeding – Instead of applying the full amounts of lime and commercial fertilizer, composted sludge and amendments may be applied as specified below:

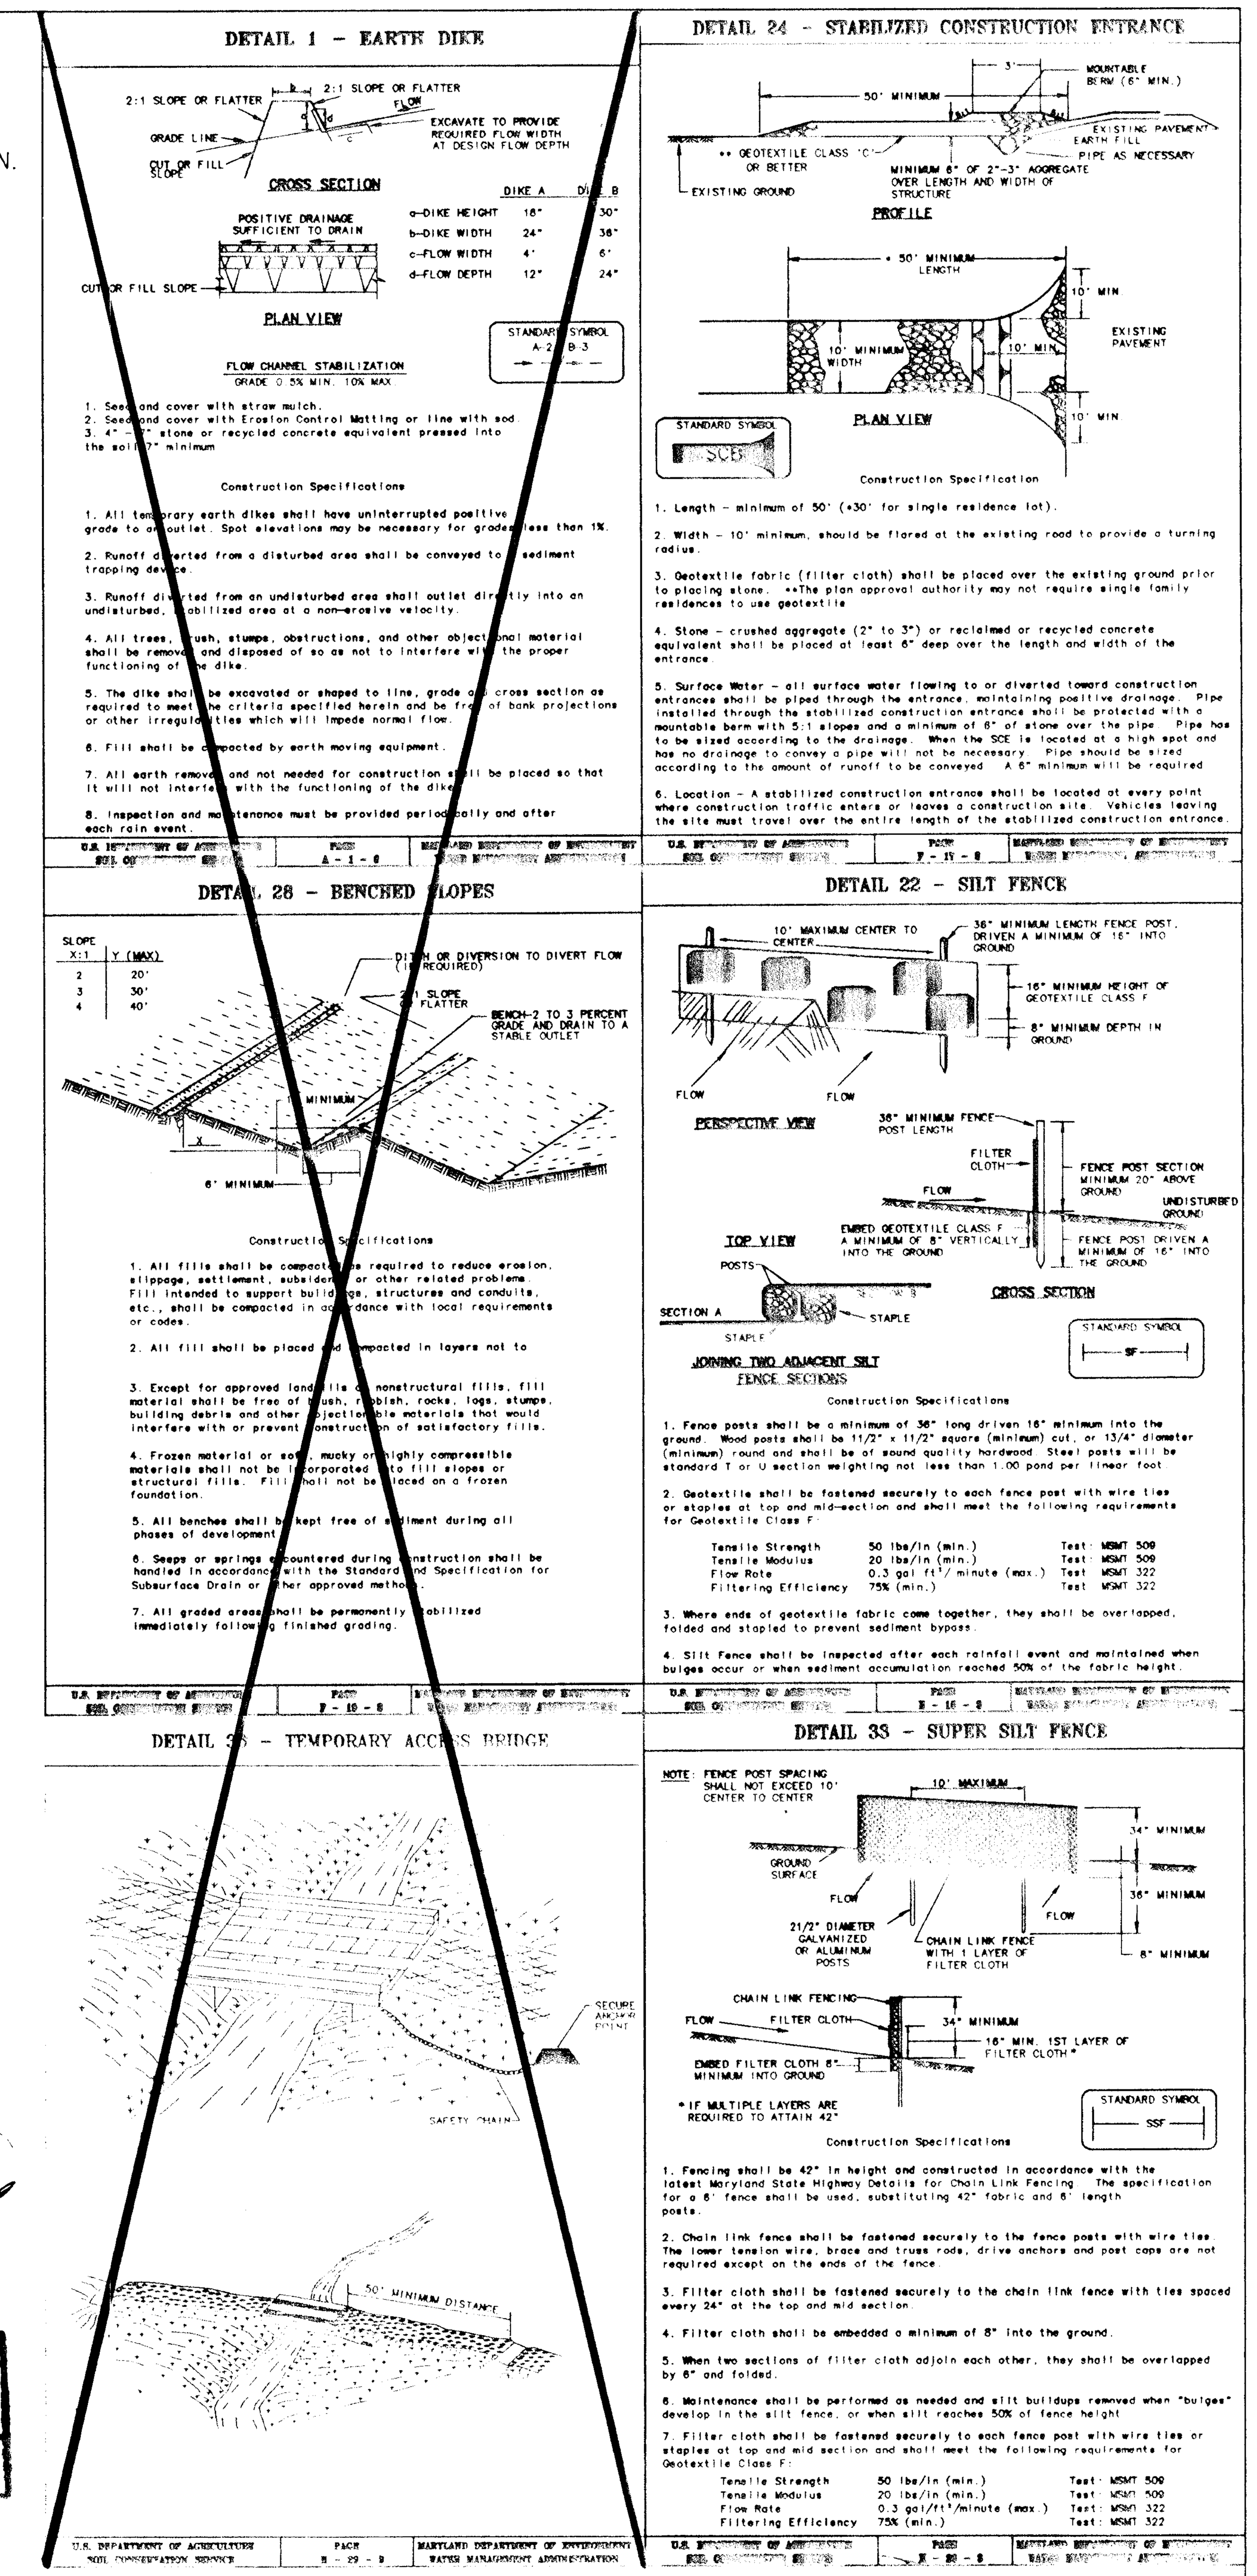
A. Composted Sludge Material for use as a soil conditioner for sites having disturbed areas over 5 acres shall be tested to prescribe amendments and for sites having disturbed areas under 5 acres shall conform to the following, requirements:

1. Composted sludge shall be supplied by, or originate from, a person or persons that are permitted (at the time of acquisition of the compost) by the Maryland Department of the Environment under COMAR 26.04.06.
2. Composted sludge shall contain at least 1 percent nitrogen, 1.5 percent phosphorus, and 0.2 percent potassium and have a Ph of 7.0 to 8.0. If compost does not meet these requirements, the appropriate constituents must be added to meet the requirements prior to use.
3. Composted sludge shall be applied at a rate of 1 ton/1,000 square feet.

B. Composted sludge shall be amended with a potassium fertilizer applied at the rate of 4 lb/1,000 square feet, and 1/3 the normal lime application rate.

References: Guideline Specifications, Soil Preparation and Sodding MD-VA, Pub. #1, Cooperative Extension Service, University of Maryland and Virginia Polytechnic Institutes. Revised 1973.

NOTE: LOCATIONS OF STABILIZED CONSTRUCTION ENTRANCES ARE TO BE PREAPPROVED BY THE INSPECTOR PRIOR TO INSTALLATION AND RELOCATION.



DETAILS 24, 22, AND 33 TO BE USED AT THE DISCRETION OF THE CONTRACTOR And the Howard County Sediment and Erosion Control Inspector.

HELICAL PIER VERTICAL SUPPORT

NOT TO SCALE

GENERAL NOTES:

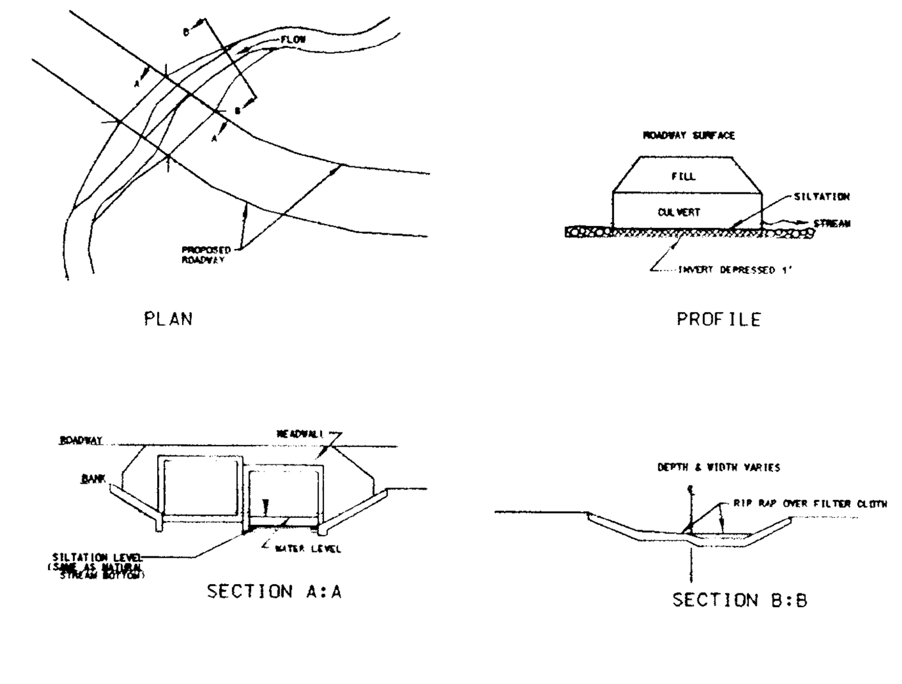
1. SPECIFICATIONS:
MD. STATE SPECIFICATIONS FOR CONSTRUCTION AND MATERIAL, THE BOCA NATIONAL BUILDING CODE/1987, TENTH EDITION. BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE, (ACI 318-83, REVISED, 1986)

2. DESIGN LOADS:
THE BOARDWALK DECK AND FRAMING HAS BEEN DESIGNED FOR THE FOLLOWING LIVE LOAD: 100 P.S.F.

3. CONCRETE:
CONCRETE FOR VERTICAL PIER ENCASEMENT SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH OF 3,000 P.S.I. AT TWENTY-EIGHT (28) DAYS.

4. TIMBER:
ALL LUMBER SIZES AND LUMBER DIMENSIONS ARE NOMINAL. ALL LUMBER TO MEET OR EXCEED THE GRADES ESTABLISHED IN THE SPECIFICATONS. ALL TIMBER BEAMS, JOISTS, DECKING AND POSTS SHALL BE SOUTHERN PINE NO. 1 OR BETTER, AND SHALL BE PRESSURE TREATED TO THE RETENTION VALUES LISTED BELOW IN LBS. PER CUBIC FEET:
-SUPERSTRUCTURE, 1.0
-DECK SURFACES, 0.6.
ALL BOLTS IN TIMBER SHALL BE INSTALLED WITH A 3" MINIMUM EDGE AND END DISTANCE, UNLESS NOTED OTHERWISE. INSTALL SOLID BLOCKING BETWEEN JOISTS AT ALL BEAMS AND RAIL POST LOCATIONS. ALL BOLTS IN TIMBER SHALL BE ¾" DIAMETER ASTM A-307, UNLESS NOTED OTHERWISE. ALL MULTIPLE "2x" BEAMS AND JOISTS SHALL BE FASTENED WITH ⅜" DIAMETER BOLTS @ 16"o.c., STAGGERED TOP AND BOTTOM. NAIL SIZE AND SPACING SHALL BE IN ACCORDANCE WITH APPENDIX "C" OF THE BOCA NATIONAL BUILDING CODE/1987.

5. MISCELLANEOUS METALS:
ALL METAL FASTENERS, CONNECTORS AND BOLTS FOR TIMBER CONSTRUCTION SHALL BE NOT DIPPED GALVANIZED STEEL. METAL FABRICATIONS SHALL BE GALVANIZED AFTER WELDING AND MACHINING. IF THE GALVANIZING IS REMOVED DURING ASSEMBLY, COLD GALVANIZING SHALL BE NEATLY APPLIED TO ALL EXPOSED AREAS.



I. DESCRIPTION

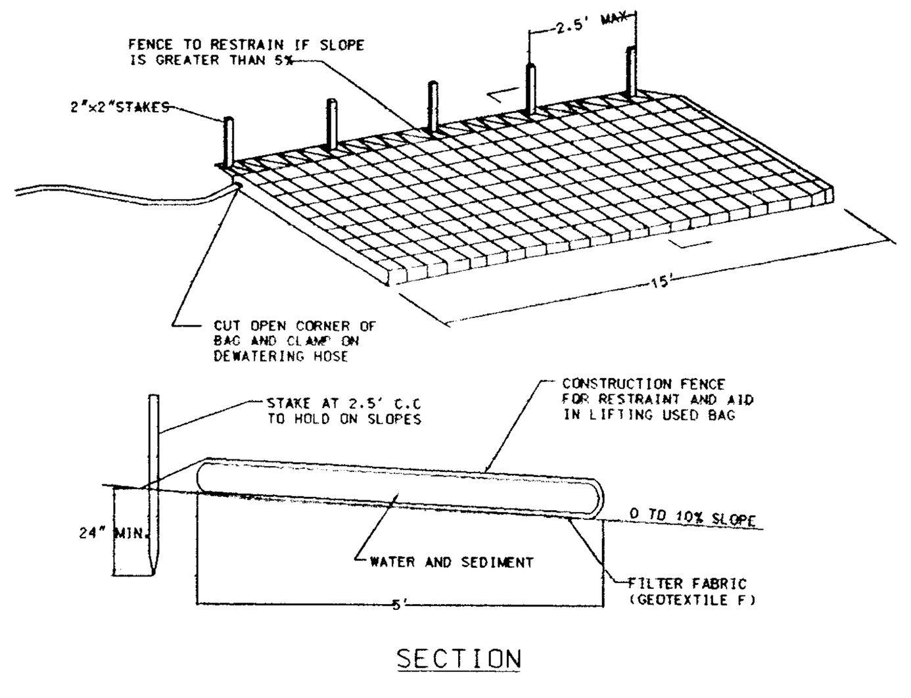
THIS WORK SHALL CONSIST OF DEPRESSING IN STREAM CULVERTS ONE FOOT BELOW THE NATURAL STREAM INVERT TO ENCOURAGE CHANNELIZATION AND TO ALLOW WATER TO POOL AND DEPOSIT SEDIMENTS, THUS IMPROVING FISH PASSAGE. IN THE EVENT OF A STORM, ALL SEDIMENT WILL BE WASHED AWAY, INSURING THE EFFECTIVENESS AND INTEGRITY OF THE CULVERT.

II. CONSTRUCTION REQUIREMENTS

THE CONSTRUCTION OF THE DEPRESSED CULVERT SHALL BE THE SAME AS FOR A STANDARD CULVERT. IN THE CASE OF DOUBLE OR TRIPLE-CELLED CULVERTS, ONLY ONE OR TWO CULVERTS SHALL BE DEPRESSED AS NECESSARY. STREAMS WITH HIGH SLOPE GRADIENTS MAY NOT BE SUITABLE FOR DEPRESSED CULVERTS BECAUSE INCREASED VELOCITIES MAY SCOUR THE BOTTOM AND RESTRICT SEDIMENTATION.

approved otherwise by the Administration.

WATER RESOURCES ADMINISTRATION	DEPRESSED CULVERT	Approved On 1/24/84 Chief, Waterway Permits	WPD 5.3

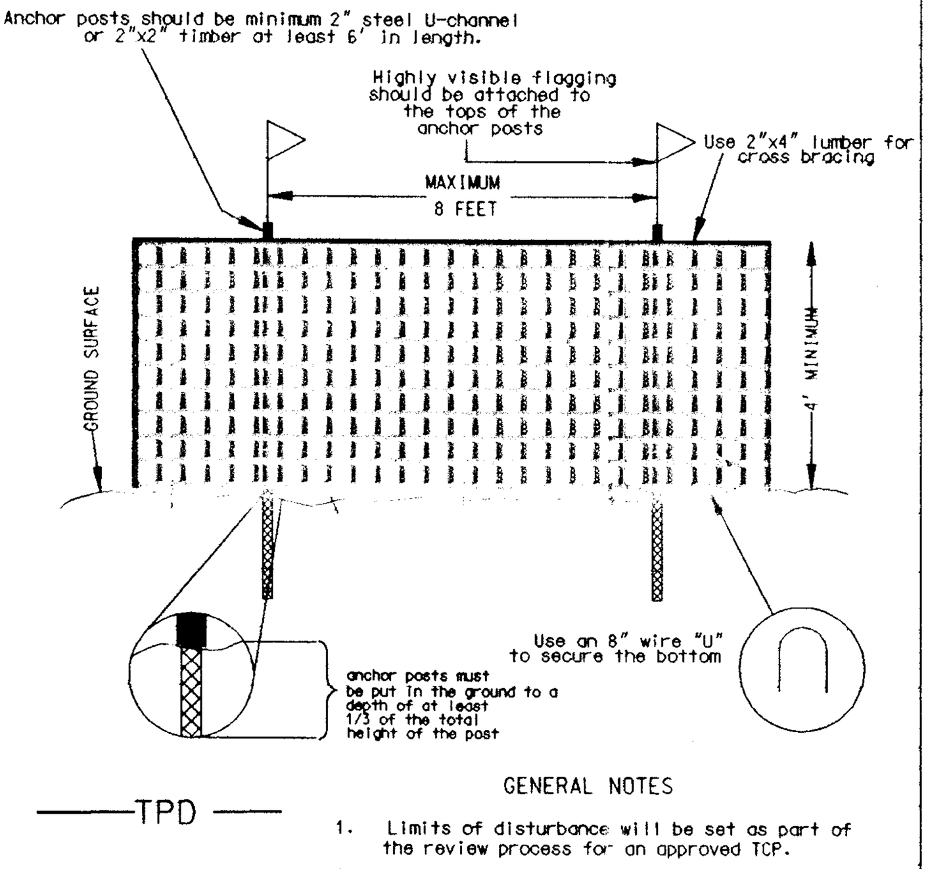


SECTION

NOTES:
1. FILTER BAG SHALL BE PLACED ON A SLOPING OR LEVEL, WELL GRADED VEGITATED SITE SUCH THAT WATER WILL FLOW AWAY FROM DEVICE AND ANY WORK AREAS.
2. WIDTH AND LENGTH SHALL BEAS SHOWN.
3. THE FILTER BAG MUST BE STAKED IN PLACE AND SECURE TO THE PUMP DISCHARGE LINE.
4. FILTER BAG SHALL NOT BE USED FOR DISCHARGE FLOWS GREATER THAN 300 GPM.
5. DEVICE SHALL BE REMOVED AND DISPOSED OF AFTER BAG IS FILLED WITH SEDIMENT. SEDIMENT FROM BAG SHALL BE SPREAD IN AN UPLAND AREA.
6. FILTER FABRIC SHALL MEET THE FOLLOWING REQUIREMENTS FOR GEOTEXTILE CLASS "F".

TENSILE STRENGTH	50 lbs./in. (min)	TEST: MSMT 509
TENSILE MODULUS	20 lbs./in. (min.)	TEST: MSMT 509
FLOW RATE	0.3 gal. ft2/minute (max)	TEST: MSMT 322
FILTERING EFFICIENCY	75% (min.)	TEST: MSMT 322

WATER RESOURCES ADMINISTRATION	FILTER BAG TEMPORARY EROSION CONTROL MEASURE	Approved On 1/24/84 Chief, Waterway Permits	WPD FB



—TPD—

GENERAL NOTES
1. Limits of disturbance will be set as part of the review process for an approved TCP.
2. The boundaries of the limits of disturbance should be staked and flagged prior to erecting the protective device.
3. Anchor posts should be placed to avoid severing or damaging large tree roots.
4. Fencing material should be fastened securely to the anchor posts, cross bracing, and ground.

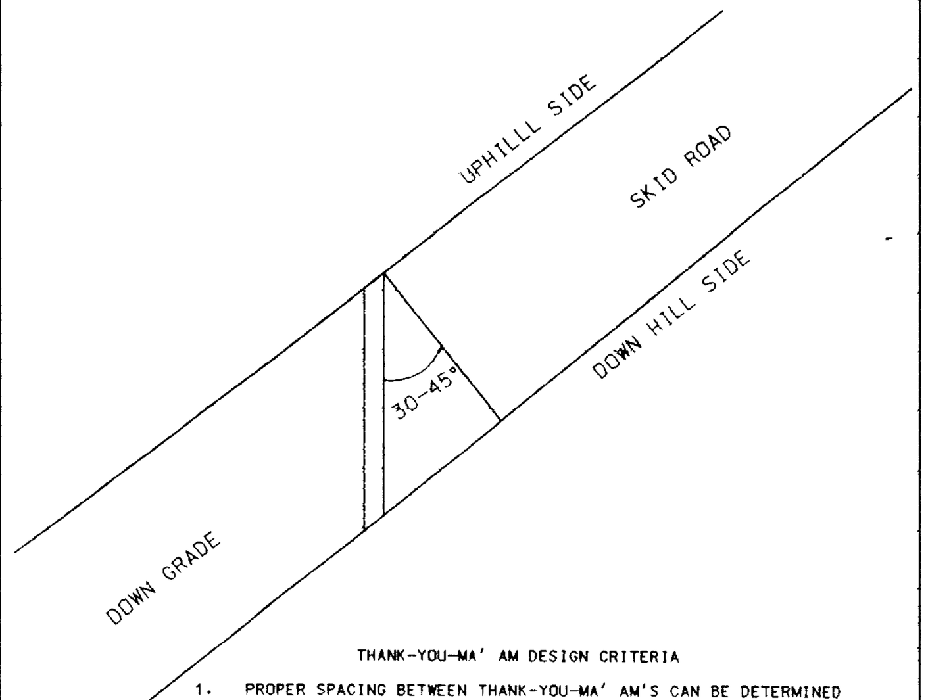
TIMBER RETAINING WALL DETAIL
SCALE: N.T.S.



THANK-YOU-MA'AM DESIGN CRITERIA

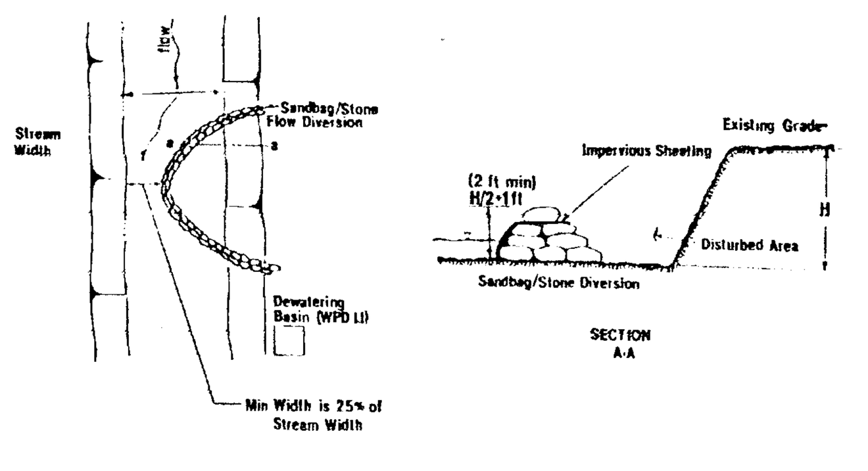
1. PROPER SPACING BETWEEN THANK-YOU-MA'AM'S CAN BE DETERMINED BY USING THIS TABLE:

EX. TRAIL/ROADWAY SLOPE	SPACING (FT.)
2%	222'
4%	154'
6%	118'
8%	95'

2. INSTALLATION SHALL BE AT AN ANGLE OF 30 DEGREES DOWN SLOPE OR MORE TO TURN SURFACE WATER OFF THE ROAD OR TRAIL.
3. A SHALLOW TRENCH SHALL BE DUG 6 TO 12 INCHES BELOW THE SURFACE OF THE ROAD OR TRAIL AND EXTEND 2 FT. BEYOND BOTH SIDES.
4. THE OVERFLOW END OF THE BAR SHALL BE FULLY OPEN AND EXTENDED FAR ENOUGH BEYOND THE EDGE OF THE ROAD OR TRAIL TO SAFELY DISPERSE RUNOFF WATER ONTO THE UNDISTURBED FOREST FLOOR.

6-12" DEEP

WATER RESOURCES ADMINISTRATION	THANK-YOU-MA'AM TYPE WATER BAY CONSTRUCTION FOR SKID ROADS	Approved On 1/24/84 Chief, Waterway Permits	WPD TYM



I. Description
The work shall consist of installing a flow diversion for the purpose of erosion control when construction activities take place within the stream channel such as bank stabilization or bridge abutment construction.

II. Material Specifications
1. Sandbags: Sandbags shall consist of materials which are resistant to ultra-violet radiation, tearing and puncture and woven tightly enough to prevent leakage of fill material (i.e., sand, fine gravel, etc.).
2. Stone: Stone shall be washed and have a minimum diameter of 6 inches.
3. Sheeting: Sheeting shall consist of polyethylene or other material which is impervious and resistant to puncture and tearing.

III. Construction Requirements
1. All erosion and sediment control devices shall be installed as the first order of work.
2. The diversion structure shall be installed form upstream to downstream.
3. The hieght of the diversion structure shall be one half the distance from stream bed to stream bank plus one foot, as indicated on the cross-section view.
4. All excavated materials shall be disposed of in a scd approved disposal area outside the 100-year floodplain unless otherwise approved on the plans by the WRA.
5. All dewarting of the construction area shall be pumped to a dewatering basin prior to re-entering the stream of sufficient size to
6. Sheeting shall be overlapped such that the upstream portion covers the downstream portion with atleast n 18-inch overlap.
7. Sediment control devices are to remain in place until all disturbed areas are stabilized in accordance with an approved sediment and erosion control plan and the inspecting authority approves their removal.

WATER RESOURCES ADMINISTRATION	Sandbag/Stone Diversion	Approved On 1/24/84 Chief, Waterway Permits	WPD 2.3
