

HO-811, House  
6443 Harthorne Avenue, Elkridge  
Howard County  
Ca. 1900  
Private

#### CAPSULE SUMMARY

This narrow, two-story, frame house faces west on the northeast corner of Athol and Harthorne Avenues. Its simple form and limited Folk Victorian decorative elements are representative of the houses built in Harwood Park in the first 20 years of the subdivision's development. It rests on a brick foundation and is capped by a front-gabled, asphalt shingle roof. A one story, one-room addition has been made to the north side of the house and another small addition, or possible porch enclosure, is found on the rear of the house.

The house at 6443 Harthorne Avenue is significant under criteria A and C in the areas of architecture and community planning. Architecturally, the house is representative of a style and form common in the late 19<sup>th</sup> and early 20<sup>th</sup> century subdivisions. The house is also significant because of its location in the Harwood Park subdivision, one of the earlier subdivisions in Howard County, and a representative example of the type of affordable subdivisions laid out along railroad lines in close proximity to big cities all over the United States.

<input type="checkbox"/> fair	<input type="checkbox"/> altered

---

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

This narrow, two-story, frame house faces west on the northeast corner of Athol and Harthorne Avenues. Its simple form and limited Folk Victorian decorative elements are representative of the houses built in Harwood Park in the first 20 years of the subdivision's development. It rests on a brick foundation and is capped by a front-gabled, asphalt shingle roof. A one story, one-room addition has been made to the north side of the house and another small addition, or possible porch enclosure, is found on the rear of the house.

The front (west) façade of the house is three bays wide. The front door is located in the far left bay and is capped by a transom. The glazed and paneled door is a relatively recent alteration. To the right of the door are two tall windows; they probably originally held 2/2 double hung wood sash but these have been replaced with 1/1 wood or aluminum windows. Three more windows are located on the second story vertically aligned above the first story openings. Like the windows on the first floor, these are 1/1 wood or aluminum windows. In the gable is one of the nice original decorative elements of the house – a round arched 2/2 wood window. A single story full width porch spans the front façade. The porch has a hipped roof, wood floor, turned supports and a wood balustrade.

The south side façade of the house features a central cross gable with another full arched 2/2 wood window. Two windows are located on the second story vertically aligned above two more windows on the first story. One additional window is located on the first story towards the front of the building. All of these windows are 1/1 wood or aluminum units. Three two-light wood windows into the basement are located in the foundation on this façade of the house.

The rear (east) façade of the house has two narrow two-light windows in the gable and one full size window on the second story. The second story windows has a 1/1 configuration like the others in the house. A small one-story, shed roofed addition extends off the rear of the first story of the house. This addition may in fact be an enclosed porch. It has a door and paired 1/1 windows on the east façade and paired 1/1 windows on both the north and south facades.

The north side façade of the house is dominated by a one-story side gabled addition that extends almost the full depth of the house. The original north façade is blank on the second story and obscured by the addition on the first. The addition has one 1/1 window on the north façade and paired 1/1 windows on the front façade.

The house is clad in asbestos siding and all portions of the roof are covered with asphalt shingles. It is in very good condition. The most notable feature of its level grassy lot are three large old trees along its southern edge beside Athol Avenue. There appears to be an old brick well behind and just south of the house, but there are no outbuildings standing on the property.

not evaluated

Prepare a one-paragraph summary statement of significance addressing applicable criteria, followed by a narrative discussion of the history of the resource and its context. (For compliance reports, complete evaluation on a DOE Form - see manual.)

The house at 6443 Harthorne Avenue is significant under criteria A and C in the areas of architecture and community planning. Architecturally, the house is representative of a style and form common in the late 19th and early 20th century subdivisions. The house is also significant because of its location in the Harwood Park subdivision, one of the earlier subdivisions in Howard County, and a representative example of the type of affordable subdivisions laid out along railroad lines in close proximity to big cities all over the United States.

The Harwood Park subdivision is located in Elkridge bounded by Route 1 on the north, the railroad on the south, and recent industrial parks on the east and west. The historic settlement of Elkridge Landing is located approximately 2 miles to the east along Route 1. Harwood Park was one of several early subdivisions in Howard County platted in the 1890's as part of the expanding wave of suburbanization across the country.

The suburban movement in community planning in the United States traces its roots back to the mid-19th century and the Romantic landscape movement. The suburban ideal consisted of substantial single family houses located on large lots on curvilinear streets in park-like settings. The two developments widely recognized as the prototypes are Llewellyn Park (1857) in New Jersey and Riverside (1869) west of Chicago in Illinois. This ideal appealed greatly to the middle class and inspired an aspiration for semi-rural living away from the noise, crime, and filth of the fast-growing cities, but still close enough to them for commuting purposes. Ease of commuting was the key to early suburban success. As transportation became more advanced and travel became easier and faster, the suburbs moved further and further away from the cities. The earliest suburbs were served by horse-drawn cars and the railroad, then came the electric streetcar, and finally, by the 1920's, the automobile. (1)

The suburban ideal in its highest form was beyond the financial means of most of the middle class and certainly all of the working class, but savvy developers found ways to create more affordable subdivisions while still appealing to the ideal of better living. These affordable developments usually relied on a rectilinear plan in lieu of the curving streets and park-like setting touted by the idealists, and the houses were smaller, though still detached single family dwellings, and located closer together on narrow lots. (2) Advances in building technology also made single-family houses increasingly affordable. Architecturally, the balloon framing method made domestic construction faster and cheaper, and mass produced decorative details popularized by pattern books and turned out in quantity by saw mills across the nation, lent many of the late 19th century developments a similar flavor. The increasing use of the railroad to transport both raw and dimensioned lumber, as well as the finished stock of doors, window sash, porch supports, and decorative brackets contributed to the suburban boom.

Suburban development continued at a steady pace across the nation during the late 19th and early 20th centuries. The proximity of various locales to booming cities and transportation routes determined the rate of suburban growth in those areas. The rise of the automobile during the 1920's made the construction of new suburbs away from the railroads a viable possibility and the population

continued to settle further and further away from the city centers. The big boom in suburban development across the country came post-World War II when the massive numbers of returning soldiers created a seemingly insatiable demand for the independence and middle class status associated with home ownership. Architecturally, the trend in the affordable subdivisions was towards increasingly modest houses built on a small scale with minimal decoration. Particularly during the Depression of the 1930's, the minimal trend helped to keep home ownership affordable for a larger portion of the population. Likewise, post-war subdivisions also exhibit mostly minimal cottages and ranchers affordable for returning soldiers and their young families. (3)

The subdivision of Harwood Park, originally called simply Har-wood, was platted in 1893 on 125 acres of land owned by the Kyne family. Har-wood was one of many suburbs laid out along important transportation routes in the late 19th century; in Howard County, the small subdivision of Anderson, down near Hanover on the Howard County side of the tracks, was laid out beside the railroad around 1871 and the subdivision of North Laurel, located, as the name suggests, just north of Laurel, was platted in 1891. (4) In Har-wood, more than 1000 individual lots were laid out by the Boston Land Improvement Company in the subdivision named for two of the company's owners, William Harmon and Charles Wood. The appeal of the subdivision was certainly its location on the railroad line running into Baltimore. There was a stop on the railroad in the Har-wood development; it is unknown if a proper station was ever built, but the stop was apparently located at the end of Beechfield Avenue. Residents of the neighborhood could commute to both Baltimore and Washington D.C. with ease on the train. (5) In addition, the Washington Turnpike, the major thoroughfare that would become Route 1 in the 1930's, was located on the northern edge of the development, providing residents with easy access to not one but two major transportation routes of the day.

Like many early subdivisions, deed covenants were used to restrict the types of development that could occur in Har-wood, and an 1894 deed states "owners shall not permit to be erected on any part of the assigned ground, or any part thereof, any tavern, saloon, tannery, slaughter house, skin dressing, glue, soap, candle or starch manufacturing establishment, or any other building for offensive purpose or occupation." (6) In addition, houses built in Har-wood had to cost at least \$800. Har-wood was clearly conceived as one of the affordable suburbs mentioned above intended to make the suburban ideal available to a wider portion of the middle class. The rectilinear plan of the streets and numerous small, narrow lots are good indicators of the clientele the developers were hoping to attract. It is unknown how many lots were actually sold and developed during the first decade of the subdivision's existence. There are certainly some dwellings still standing that date to the 1890's, but today a vast majority date to the 1940's and 1950's. According to an elderly resident, there were only around 15 homes built in Har-wood by 1912, and by 1925 only 5 houses were located along all of Athol Avenue. (7) For the first 50 years of its life then, the neighborhood of Har-wood must have retained a very rural feel. The railroad faded from prominence as a mode of transportation during the early 20th century with the development of the automobile and automobile suburbs away from the railroads became increasingly popular. It is notable that the houses constructed in Har-wood became increasingly modest during the early 20th century. There are less than 10 two-story Folk Victorian dwellings in all of Har-wood; those houses constructed in the 20's and 30's were more often minimal one story bungalows or cottages. The upper middle class, those more likely to build large houses in the Victorian or Colonial Revival styles, was obviously looking elsewhere. But Har-wood certainly came into its own during the post-war years of suburban development and the modest cottages and ranchers of this period dominate the landscape. The name of the neighborhood was changed to Harwood Park by 1940.

The house at 6443 Harthorne Avenue is a good example of the modest, narrow, single family houses built in Harwood Park during the first decade of development. This house probably dates to around 1900 and is more modest than the other Folk Victorian dwellings in the neighborhood. Only the arched windows in the gables and turned porch supports attribute it to the Folk Victorian classification. The house is in very good condition with its original form clearly visible and it is representative of the type of dwelling one would find in a turn of the century affordable subdivision.
