HOWARD SOIL CONSERVATION DISTRICT

PERMANENT SEEDING NOTES

Seeding of permanent seed mixtures should be done with a planting device that will place seed at the correct depth for establishment of permanent permanent plants. Adequate spacing and planting density are important for the establishment of a healthy, uniform stand of permanent plants.

1. Use seed mixtures with at least 75% grasses and legumes to ensure good cover and fertility.
2. Use a width of 10 to 12 feet for the seeding device.
3. Use a depth of 2 to 3 inches for the seeding device.
4. Use a plant density of 10 to 15 plants per square foot.
5. Use a spacing of 1 to 2 feet between the rows.
6. Use a seed mix that is adapted to the local climate and soil conditions.
7. Use a seed mix that is adapted to the local climate and soil conditions.
8. Use a seed mix that is adapted to the local climate and soil conditions.
9. Use a seed mix that is adapted to the local climate and soil conditions.
10. Use a seed mix that is adapted to the local climate and soil conditions.

STANDARD AND SPECIFICATIONS FOR TOPSOIL

STANDARD SEDIMENT CONTROL NOTES

1. A standard for sediment control is provided by the Howard Soil Conservation District and is available upon request.
2. The standard for sediment control includes:
   a. A minimum of 75% grasses and legumes
   b. A width of 10 to 12 feet
   c. A depth of 2 to 3 inches
   d. A plant density of 10 to 15 plants per square foot
   e. A spacing of 1 to 2 feet between the rows
   f. A seed mix that is adapted to the local climate and soil conditions
   g. A seed mix that is adapted to the local climate and soil conditions
   h. A seed mix that is adapted to the local climate and soil conditions
   i. A seed mix that is adapted to the local climate and soil conditions
   j. A seed mix that is adapted to the local climate and soil conditions

SEQUENCE OF CONSTRUCTION

1. Obtain grading permit
2. Construct erosion control construction features at location
3. Finalize grading of site
4. Grade site
5. Construct storm drain system and block
6. Open site to public access and road use
7. Stabilize all disturbed areas
8. Plant native grasses and legumes

TEMPORARY DUST CONTROL MEASURES

1. Dust control measures are necessary in the following circumstances:
   a. When there is a potential for dust to be generated
   b. When there is a potential for dust to be generated
   c. When there is a potential for dust to be generated
   d. When there is a potential for dust to be generated
   e. When there is a potential for dust to be generated
   f. When there is a potential for dust to be generated
   g. When there is a potential for dust to be generated

NOTE TO THE OPERATOR: This document is designed for ease of use and understanding. It should be consulted carefully before proceeding with any construction or grading work.
