The area represented on the Forest Conservation Plan are to provide for forest own source, native species, and to provide for reforestation to reflect all present forest clearing in the project.

A total of approximately 104 acres of forest clearing (95.4 acres outside of the quarry, 3.4 acres within the quarry), will be necessary for development of the wetlands reforestation areas. The quarry reforestation area contains an estimated 20 acres of reforestation area, which will be designated for reforestation by the permit holder. The quarry reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.

The reforestation area is designated for reforestation by the permit holder. The reforestation area is located outside of the quarry boundary and is not included in the reforestation area of the quarry.
