EASTERN MORNING STA. 0+00 TO STA. 17.50

EBB TIDE LANE, VAST OCEAN PASS
ANCIENT SEA PATH
6. CONSTRUCTION REQUIREMENTS

6.1. General Requirements

Controlled compost (C1) will be required for the embankments along the DIWW's portion of the pond area west to a depth of 1.2 m. The embankment on the eastern side of the pond is higher and will not require composting.

6.2. Embankment Construction

(a) All fill present embankments, unused embankment, or any portion requiring stable support or secured embankment shall be required to be controlled compost fill. Controlled compost fill shall be placed in 1.5 m lifts with each lift compacted to achieve the required density.

(b) Subsoil shall be removed from the area and placed in the controlled compost fill. Subsoil shall be placed at a rate of 1.5m³ per cubic meter of compost.

(c) The final grade of the control compost fill shall be maintained at a minimum of 2.2% to prevent erosion.

(d) The slope of the embankments shall be maintained at a maximum of 1:1 to prevent erosion.

6.3. General Excavation

(a) Excavation of materials shall be conducted in a manner to avoid creating excess material. Excess material shall be removed to the extent possible to minimize the need for additional compost.

(b) Excavation shall be conducted in such a manner as to prevent the creation of excess material. Excess material shall be removed to the extent possible to minimize the need for additional compost.

6.4. General Observation and Testing

(a) General observation and testing will be conducted to ensure the compliance with the specified requirements. Observation and testing will be conducted at regular intervals.

(b) Observation and testing will be conducted to ensure the compliance with the specified requirements. Observation and testing will be conducted at regular intervals.

7. GEOTECHNICAL OBSERVATION AND TESTING

(a) Observation and testing are required to ensure that the required support is in place. It is important that the Rock Biker Company, as the geotechnical consultant, review all the results and ensure that the required support is in place. Observation and testing will be conducted to ensure the compliance with the specified requirements. Observation and testing will be conducted at regular intervals.

(b) Observation and testing are required to ensure that the required support is in place. It is important that the Rock Biker Company, as the geotechnical consultant, review all the results and ensure that the required support is in place. Observation and testing will be conducted to ensure the compliance with the specified requirements. Observation and testing will be conducted at regular intervals.

8. GENERAL CONCLUSIONS

The Rock Biker Company, as the geotechnical consultant, has been engaged to provide geotechnical services for the proposed project. The geotechnical services will include observation and testing of all materials, verified design, and provide a report for the proposed project.

The Rock Biker Company, as the geotechnical consultant, has been engaged to provide geotechnical services for the proposed project. The geotechnical services will include observation and testing of all materials, verified design, and provide a report for the proposed project.
