OPERATION, MAINTENANCE AND INSPECTION

31. Standard Sediment Control Notes

A. The grass is to be maintained to a height of 8 inches (200 mm) as a minimum. 
B. A drainage swale around the site is to be maintained to a minimum grade of 0.5%.

C. A sedimentation pond is to be maintained to a minimum size of 200 cubic yards (150 m³).

D. All storms are to be maintained to a minimum grade of 0.5%.

E. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

F. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

G. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

H. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

I. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

J. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

K. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

L. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

M. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

N. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

O. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

P. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Q. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

R. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

S. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

T. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

U. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

V. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

W. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

X. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Y. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Z. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

A. The grass is to be maintained to a height of 8 inches (200 mm) as a minimum. 
B. A drainage swale around the site is to be maintained to a minimum grade of 0.5%.

C. A sedimentation pond is to be maintained to a minimum size of 200 cubic yards (150 m³).

D. All storms are to be maintained to a minimum grade of 0.5%.

E. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

F. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

G. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

H. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

I. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

J. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

K. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

L. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

M. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

N. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

O. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

P. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Q. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

R. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

S. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

T. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

U. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

V. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

W. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

X. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Y. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.

Z. A storm drain over 24 inches (600 mm) in diameter is to be maintained to a minimum grade of 0.5%.
