### Standards & Specifications for Vegetative Stabilization

**A. Site Preparation**

- Prior to stabilization efforts, the site shall be prepared by eliminating all existing vegetation.
- The site shall be graded to ensure proper drainage and to prepare the surface for seed placement.

**B. Vegetative Treatment**

- Seeding shall be done bybroadcasting the selected vegetation at the recommended rate.
- The area shall be kept free of weeds and debris during the growing season.

**C. Maintenance**

- Regular mowing and watering shall be performed as necessary to maintain the vegetation.
- The area shall be monitored for signs of disease or pest activity.

### Section V: Temporary Construction

**Erosion Control**

- Temporary erosion control measures shall be installed for all construction activities that disturb the land surface.
- Erosion control measures include temporary silt fences, erosion control blankets, and straw bales.

### Notes

- All areas shall be kept free of debris and waste materials.
- Site restoration shall be performed upon completion of all construction activities.

---

**DeMario Design Consultants, Inc.**

**Sediment & Erosion Control Notes**

- All erosion control measures shall be maintained throughout the construction period.
- Site restoration shall be performed upon completion of all construction activities.
