CONSTRUCTION PERIOD PROTECTION PROGRAM

A. Plant Protection Techniques

1. Build Protection Area (Cofferdam Fence)

The soil protection area, or critical root zone, of a tree is the portion of the soil surface below which its roots may grow. Good, tight, protective fencing is essential to protect the root zone from mechanical damage, flooding, or other forms of destructive activity.

2. Fences and Barriers

Fences and barriers that are intended to protect the root zone shall be placed adjacent to the tree root area where the fences and barriers have been installed. The fences and barriers shall be placed adjacent to the tree root area where the fences and barriers have been installed.

3. Pre-Construction Meeting

Upon completion of construction, a pre-construction meeting will be held to discuss the impact of the construction on the quality of the new development. The purpose of this meeting is to ensure that all activities and decisions are in accordance with the approved plan.

4. Post-Construction Meeting

After the new development is complete, a post-construction meeting will be held to review the results of the construction project. This review will help ensure that all activities and decisions are in accordance with the approved plan.

5. Final Inspection

A final inspection shall be conducted to verify that all activities and decisions are in accordance with the approved plan.

POST-CONSTRUCTION MANAGEMENT PLAN

Howard County requires a post-construction management plan to be prepared as part of the overall construction plan. This plan shall outline the steps that will be taken to maintain the quality of the new development. The plan shall include a schedule of maintenance activities and the frequency of these activities.
