1. Immediately following the start of clearing operations the diversion berms shown on this plan will be constructed using 18" flexible tube down drains where dewatering structures are not used.
2. Diversion berms will be built to keep the water from the diversion berms and silt traps, ditches and berm will be retained after final lift.
3. Diversion areas are to be maintained in a rough, grassed condition until proper weather conditions exist for the establishment of permanent vegetation cover.
4. No slopes shall be steeper than 1:3 vertical to 1:2 horizontal.
5. Final stabilization with vegetation cover will take place as early in the spring as weather conditions permit. It will be done as follows:
   a. Maintain 1.0 - 1.5 foot contour line at one ton per acre.
   b. Apply 18,000 - 27,000 pounds of fertilizer per acre 1/2 to 3/4 of a ton per acre.
   c. Apply 2,000 - 3,000 pounds of rock salt on all 1:3 slopes with 1/2 to 3/4 of a ton per acre.
6. Mowing and brush removal shall be performed regularly as soon as weather conditions permit.
7. Diversion berms and silt traps shall be kept free of debris and vegetation growth.
8. No construction of structures, roads or other development shall take place within 100 feet of the diversion berms.
9. Silt traps shall be designed and constructed in accordance with the Howard County Water Quality Standards.
10. Silt traps shall be maintained in good working order and shall be kept free of debris and vegetation growth.
11. Silt traps shall be inspected periodically to ensure proper functioning.
12. Silt traps shall be cleaned at least once per year, or more frequently if necessary.
13. All branches shall be protected with earth berms until final grading is complete.
14. All branches shall be maintained in a rough, grassed condition until proper weather conditions exist for the establishment of permanent vegetation cover.
15. Final stabilization with vegetation cover will take place as early in the spring as weather conditions permit. It will be done as follows:
   a. Maintain 1.0 - 1.5 foot contour line at one ton per acre.
   b. Apply 18,000 - 27,000 pounds of fertilizer per acre 1/2 to 3/4 of a ton per acre.
   c. Apply 2,000 - 3,000 pounds of rock salt on all 1:3 slopes with 1/2 to 3/4 of a ton per acre.
   d. Mowing and brush removal shall be performed regularly as soon as weather conditions permit.
   e. Diversion berms and silt traps shall be kept free of debris and vegetation growth.
16. No construction of structures, roads or other development shall take place within 100 feet of the diversion berms.
17. Silt traps shall be designed and constructed in accordance with the Howard County Water Quality Standards.
18. Silt traps shall be maintained in good working order and shall be kept free of debris and vegetation growth.
19. Silt traps shall be inspected periodically to ensure proper functioning.
20. Silt traps shall be cleaned at least once per year, or more frequently if necessary.
21. All branches shall be protected with earth berms until final grading is complete.
22. All branches shall be maintained in a rough, grassed condition until proper weather conditions exist for the establishment of permanent vegetation cover.
