**SPECIFICATIONS FOR THE SEDIMENT CONTROL DETAILS**

1. Specifications for the Sediment Control Details shown below are included in the S.E.S.C. Silt Control Protection Standards and Practices for Soil Erosion and Sediment Control in Developing Areas.

2. The developer will notify the Board of County Commissioners and the Environmental Protection Agency (EPA) before any construction begins. A copy of the plans and specifications will be submitted to the County Commissioners and the EPA.

3. Sediment Control structures to be constructed in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

4. All sediment control structures must be constructed in a manner that will prevent soil erosion and sediment discharge from construction activities.

5. All graded areas not to be graded or restored prior to received approval from the Commission and written notice of the approved plans.

6. All graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

7. A grading plan must be submitted to the developer for review and approval before any construction begins.

**CONSTRUCTION SPECIFICATIONS**

1. **Grading Plan**
   - Graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

2. **Soil Erosion Control**
   - All graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

3. **Silt Fence**
   - Silt fences shall be placed at the construction site and maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

4. **Drainage Ditches**
   - All drainage ditches shall be constructed and maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

5. **Runoff Control**
   - All runoff shall be managed to prevent soil erosion and sediment discharge from construction activities.

6. **Buffer Strips**
   - All buffer strips shall be maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

7. **Soil Stabilization**
   - All soil shall be stabilized in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

8. **Silt Fence Details**
   - Silt fences shall be constructed in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

9. **Grading Plan**
   - Graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

10. **Runoff Control**
    - All runoff shall be managed to prevent soil erosion and sediment discharge from construction activities.

11. **Buffer Strips**
    - All buffer strips shall be maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

12. **Soil Stabilization**
    - All soil shall be stabilized in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

13. **Silt Fence Details**
    - Silt fences shall be constructed in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

14. **Grading Plan**
    - Graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

15. **Runoff Control**
    - All runoff shall be managed to prevent soil erosion and sediment discharge from construction activities.

16. **Buffer Strips**
    - All buffer strips shall be maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

17. **Soil Stabilization**
    - All soil shall be stabilized in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

18. **Silt Fence Details**
    - Silt fences shall be constructed in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

19. **Grading Plan**
    - Graded areas shall be graded and restored in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

20. **Runoff Control**
    - All runoff shall be managed to prevent soil erosion and sediment discharge from construction activities.

21. **Buffer Strips**
    - All buffer strips shall be maintained in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

22. **Soil Stabilization**
    - All soil shall be stabilized in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.

23. **Silt Fence Details**
    - Silt fences shall be constructed in accordance with current erosion control practices to prevent soil erosion and sediment discharge from construction activities.
