1. SITE PREPARATION

Areas designated for borrow source, embankment, and structural material shall be designated and delineated by lines and slope. All borrow areas shall be free of debris, vegetation, and natural or artificial features that may affect the quality of the borrow material. All borrow areas shall be contained by permanent fencing and gates.

2. BURROW MATERIAL

All borrow material shall be screened and graded as required for the intended use. Borrow material shall be placed in borrow areas in such a manner as to minimize surface disturbance and to facilitate the construction of embankments and other features.

3. EMBANKMENT MATERIAL

All embankment material shall be placed in borrow areas in such a manner as to minimize surface disturbance and to facilitate the construction of embankments and other features.

4. GROUND PLANE

The ground plane shall be established and maintained to facilitate the construction of embankments and other features.

5. TYPICAL EMBANKMENT PROFILE

The typical embankment profile shall be established and maintained to facilitate the construction of embankments and other features.

6. TYPICAL SECTIONAL EMBANKMENT

The typical sectional embankment shall be established and maintained to facilitate the construction of embankments and other features.

7. TYPICAL RIP RAP PROFILE

The typical rip rap profile shall be established and maintained to facilitate the construction of embankments and other features.

8. TYPICAL RIP RAP SECTIONAL

The typical rip rap sectional shall be established and maintained to facilitate the construction of embankments and other features.

9. TYPICAL RIP RAP DETAIL

The typical rip rap detail shall be established and maintained to facilitate the construction of embankments and other features.

10. TYPICAL SPILLWAY

The typical spillway shall be established and maintained to facilitate the construction of embankments and other features.
