1. SITE PREPARATION

All surrounding areas, excavation, shaping, and excavation shall be properly managed to ensure that all excavated material is properly stacked and consolidated. The excavation area shall be properly graded to ensure proper drainage and to prevent sheet erosion.

2. MATERIALS

All materials to be used shall be properly stored and protected from the elements. All materials shall be transported to the site in a clean and dry condition.

3. CONNECTIONS

All connections shall be properly made to ensure proper infiltration. The train pipe shall be properly connected to the header pipe with proper fittings and gaskets.

4. BORING LOG

The boring log shall be properly recorded to ensure proper monitoring of the boring process.

5. SUSTAINABILITY

Efforts shall be made to minimize the impact of the excavation on the environment. All materials shall be properly recycled and disposed of in an environmentally friendly manner.

6. FINISHING TOUCHES

The finished trench shall be properly backfilled to ensure proper infiltration. The finished trench shall be properly graded to ensure proper drainage and to prevent sheet erosion.
