GUIDELINES FOR THIRD PARTY ACTIVITY ON COLONIAL RIGHT-OF-WAY

1. Colonial desires sufficient prior notice of planned activity involving excavation, blasting, or any type of construction on Colonial right-of-way to determine and resolve any location, grade, or encroachment problems, and provide protection of our facilities before the actual work is to take place. The following are the known contacts: 1) Mr. William F. Berry, Area Manager (410)549-4105, 2) Mr. Rod Seeley, Area Engineer (410)549-4108, 3) Mr. Harold Miller, Field Coordinator (410) 355-8155 and 4) Mr. Tommie Tiller, Chief Operator (410)355-5754.
2. Foreign utilities shall be required to cross Colonial pipelines and right-of-way at as near a 90° angle of intersection as possible.
3. Foreign utilities shall not be installed longitudinally within the Colonial right-of-way.
4. Foreign utilities crossing Colonial right-of-way should be installed a minimum of 2'0" below the bottom of Colonial pipeline where practical, and this elevation maintained for the entire width across the Colonial right-of-way.
5. A Colonial representative shall meet with the excavator on the site and explain marking, depth of pipeline, width of right-of-way, and Colonial requirements for protecting the pipeline during the progress of the work. Telephone numbers and verification of the date and approximate hour the work is expected to take place should be exchanged.
6. The use of probes to locate the pipeline(s) shall be held to a minimum to prevent unnecessary damage to the pipeline coating.
7. Burning of trash, brush, debris, etc., should not be permitted within the Colonial Pipeline right-of-way.
8. Heavy equipment should not be permitted to operate over the pipeline(s) unless measures such as matting of earth padding have been provided to protect the pipeline from vibrating, overloading, or physical damage.
9. Blasting within the immediate vicinity of a Colonial pipeline should be permitted only with the prior knowledge of the Region Engineering Manager. The blaster shall be responsible for any damage and blasts at his own risk.
10. Preliminary pipe markers over the pipeline should be rechecked at the time excavation is scheduled to reach the Colonial right-of-way.
11. Excavation on Colonial right-of-way should not be permitted without a Colonial representative present on the site. The Colonial representative should be equipped with a means of rapidly communicating with the nearest manned Colonial facility.
12. The Colonial representative who is to witness an excavation should notify the nearest manned Colonial facility of the location, time, and type of work that is to take place before the work is started.
13. Only hand excavation shall be permitted within 5'0" of either side of the extremity of a Colonial pipeline, valve, or fitting.
14. Excavating that might cause sloughing, sliding, or otherwise undermine the soil supporting a Colonial pipeline shall not be permitted unless the party performing such excavation provides any necessary protection for Colonial's facility.
15. Excavating or grading which might result in erosion or which could render the Colonial right-of-way inaccessible should not be permitted unless contractor agrees to restore the area and provide protection to Colonial's facility.
16. The Colonial pipeline should not be left unattended while the pipe is exposed without approval of the Area Manager.
17. Machines and equipment with booms, buckets, etc., should not be permitted to operate over an exposed Colonial pipeline.
18. Scratches, gouges, dents, etc., in the pipe shall be reported to the Area Manager. Any necessary repairs to the pipe will be made and inspected before the coating is repaired and backfill permitted.
19. Representatives who are responsible for the planning, coordinating, and inspecting of blasting, excavating, and constructing for Colonial Pipeline Company are expected and required to follow these same protective procedures when performing work in the vicinity of or on the right-of-way of other utilities.

GENERAL NOTES

1. ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE LATEST STANDARDS AND SPECIFICATIONS OF HOWARD COUNTY PLUS MSHA STANDARDS AND SPECIFICATIONS, IF APPLICABLE.
2. ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE CURRENT HOWARD COUNTY DESIGN MANUAL, VOL. IV.
3. THE CONTRACTOR SHALL NOTIFY THE DEPARTMENT OF PUBLIC WORKS/BUREAU OF CONSTRUCTION INSPECTION DIVISION AT (410)-313-1870. AT LEAST FIVE (5) WORKING DAYS PRIOR TO THE START OF WORK.
4. THE CONTRACTOR SHALL NOTIFY "MISS UTILITY" AT 1-800-257-7777 AT LEAST 48 HOURS PRIOR TO ANY EXCAVATION WORK.
5. PROJECT BACKGROUND (UNLESS INCLUDED IN TITLE BLOCK):
   LOCATION TAX MAP: 38, PARCELS: 284 AND 285
   ZONING: M-2 ELECTION DISTRICT: FIRST
   TOTAL TRACT AREA: 193.762 AC.+
   TOTAL AREA OF PARCELS TO BE RECORDED: 180.347 AC.+
   TOTAL AREA OF ROAD RIGHT-OF-WAY: 11.235 AC.+
   NUMBER OF PROPOSED PARCELS: 7
   DATE PRELIMINARY PLAN APPROVED AND DPZ REFERENCE NO.: OCTOBER 1, 1992; P 91-14.
6. THIS PLAN IS SUBJECT TO WAIVER WP 91-98 DATED MARCH 15, 1991 WHICH APPROVED THE FOLLOWING:
   1) SECTION 16.116.c.6 - TO PERMIT REMOVAL OF VEGETATIVE COVER AND/OR GRADING ON STEEP SLOPES ADJACENT TO A FLOOD PLAIN OR WETLAND, AND WITHIN WETLANDS.
   2) SECTION 16.116.c.4 - TO PERMIT THE ELIMINATION OF THE REQUIRED 25 FOOT WETLAND BUFFERS FOR ROAD CROSSINGS, STORMWATER MANAGEMENT AND FUTURE DEVELOPMENT AREAS.
7. TRAFFIC CONTROL DEVICES, MARKINGS, AND SIGNING SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD). ALL STREET AND REGULATORY SIGNS SHALL BE IN PLACE PRIOR TO THE PLACEMENT OF ANY ASPHALT.
8. BOUNDARY AND TOPOGRAPHIC SURVEY WAS PREPARED BY PHOTO SCIENCE, INC. ON OR ABOUT APRIL, 1990.
9. HORIZONTAL AND VERTICAL CONTROL DATUM IS BASED ON HOWARD COUNTY GEODETIC CONTROL STATIONS 22446002 AND 22446003.
10. LIGHT POLES AND FIXTURES FOR STREET LIGHTS SHALL BE IN ACCORDANCE WITH THE LATEST HOWARD COUNTY DESIGN MANUAL, VOLUME III, ROADS AND BRIDGES.
11. PUBLIC WATER AND SEWER IS TO BE UTILIZED WITHIN THIS SUBDIVISION. THIS SUBDIVISION IS LOCATED IN THE PATAPSCO DRAINAGE AREA.
12. STORM WATER MANAGEMENT FOR THE ENTIRE SUBDIVISION IS PROVIDED UNDER F 94-24. DETENTION FACILITIES WERE SIZED TO MANAGE ULTIMATE SITE CONDITIONS.
13. THE HYDRAULIC GRADIENT SHOWN ON THE STORM DRAIN PROFILES IS BASED ON A 10 YEAR DESIGN FREQUENCY.
14. FLOOD PLAIN STUDY AND WETLANDS DELINEATION WAS COMPLETED, REVIEWED AND APPROVED UNDER P 91-14 ON OCTOBER 1, 1992.
15. THE TRAFFIC STUDY WAS PREPARED BY THE TRAFFIC GROUP AND WAS APPROVED UNDER P 91-14 ON OCTOBER 1, 1992.
16. NOISE STUDY IS NOT REQUIRED FOR THIS INDUSTRIAL ZONED PROPERTY.
17. GEOTECHNICAL REPORT WAS DONE BY ITE ASSOCIATES AND WAS REVIEWED AND APPROVED UNDER P 91-14 ON OCTOBER 1, 1992.
18. ALL EXISTING UTILITIES SHOWN WERE LOCATED FROM EXISTING ROAD CONSTRUCTION DRAWINGS AND EXISTING WATER AND SEWER CONTRACTS.
19. FOR RIP-RAP SPECIFICATIONS AND DESIGN DATA, SEE DETAIL SHEET 7.
20. IMPACT TO NONTIDAL WETLANDS & WATERWAYS WAS APPROVED ON JANUARY 15, 1994 BY MARYLAND DEPARTMENT OF NATURAL RESOURCES WATER RESOURCES ADMINISTRATION TRACKING No. 199101119G, DIVISION No. 93-NT-0858.
21. THIS PLAN IS SUBJECT TO APPROVED WAIVER No. 91-98 DATED MARCH 15, 1991 TO WAVE SECTIONS 16.116.c.4 & 16.116.c.6.
    1) TO PERMIT REMOVAL OF VEGETATIVE COVER AND/OR GRADING ON STEEP SLOPES ADJACENT TO A FLOODPLAIN OR WETLAND, WITHIN WETLANDS.
    2) TO WAIVE THE REQUIRED 25-FOOT WETLAND BUFFERS FOR ROAD CROSSINGS, STORMWATER MANAGEMENT & FUTURE DEVELOPMENT AREAS.
22. A) TOTAL EXISTING FOREST AREAS ON SITE = 123.56 Ac.±
    B) EXISTING FOREST TO BE CLEARED AS SHOWN ON P-91-14 = 98.19 Ac.±
    C) EXISTING FOREST TO BE CLEARED AS SHOWN ON THIS SUBMISSION = 81.42 Ac.±
23. STREET TREES SHALL BE A MINIMUM OF FOUR (4) FEET OF THE SIDEWALKS.
24. ALL CMP PIPES SHALL BE ALUMINIZED AND MINIMUM 14 GAUGE.
25. 95% COMPACTION SHALL BE DETERMINED BY AASHTO T-180.
26. HANDICAPP RAMPS, SIDEWALKS, AND SIDEWALK RAMPS SHALL COMPLY WITH CURRENT ADA REQUIREMENTS.
27. Parcels D-1 & E-1 recorded on F-04-067, PN 16979-16977.

RIP RAP CHANNEL DETAIL

NO SCALE

CONSTRUCTION SPECIFICATIONS FOR RIP-RAP OUTFALLS

1. The subgrade for the filter, riprap or gabion shall be prepared to the required lines and grades. Any fill required in the subgrade shall be compacted to a density of approximately that of the surrounding undisturbed material.
2. The rock or gravel shall conform to the specified grading limits when installed respectively in the riprap or filter.
3. Filter cloth shall be protected from punching, cutting or tearing. Any damage other than an occasional small hole shall be repaired by placing another piece of cloth over the damaged part or by completely replacing the cloth. All overlaps whether for repairs or for joining two pieces of cloth shall be a minimum of one foot.
4. Stone for the riprap or gabion outlets may be placed by equipment. Both shall each be constructed to the full course thickness in one operation and in such a manner as to avoid displacement of underlying materials. The stone for riprap or gabion outlets shall be delivered and placed in a manner that will insure that it is reasonably homogenous with the smaller stones and spalls filling the voids between the larger stones. Riprap shall be placed in a manner to prevent damage to the filter blanket or filter cloth. Hand placement will be required to the extent necessary to prevent damage to the permanent works.

REVISION 1 5/3/01

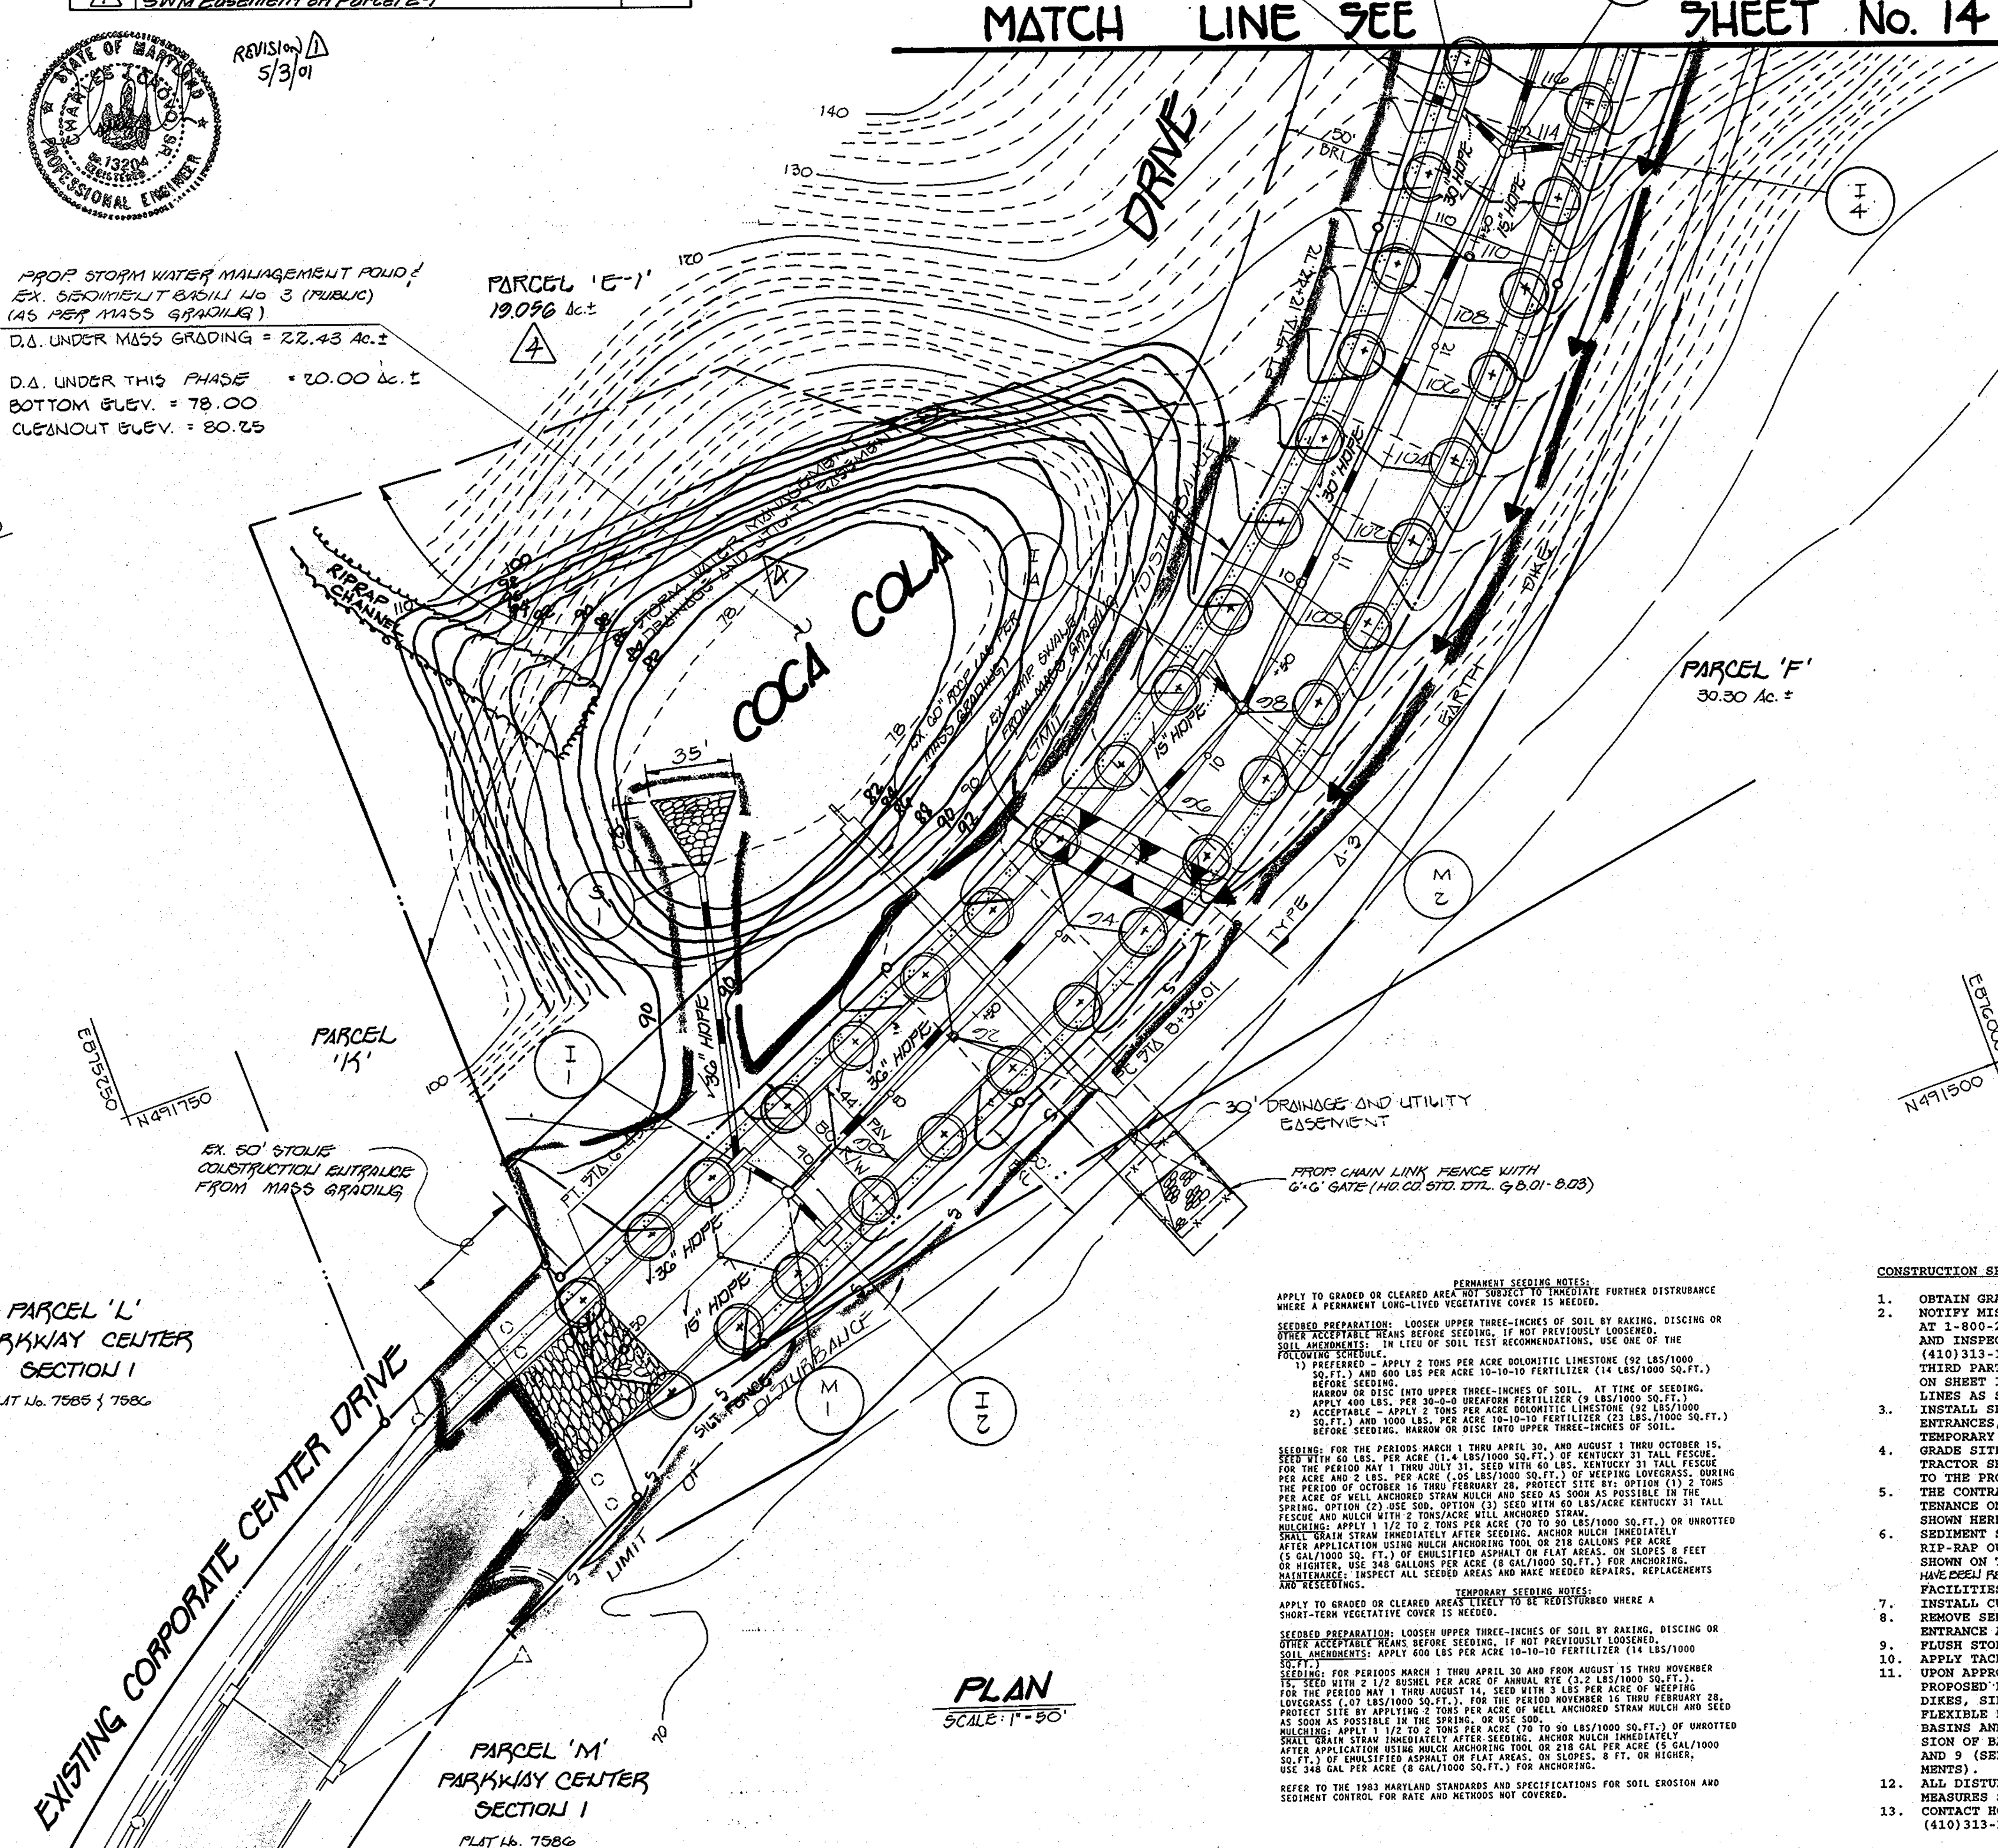
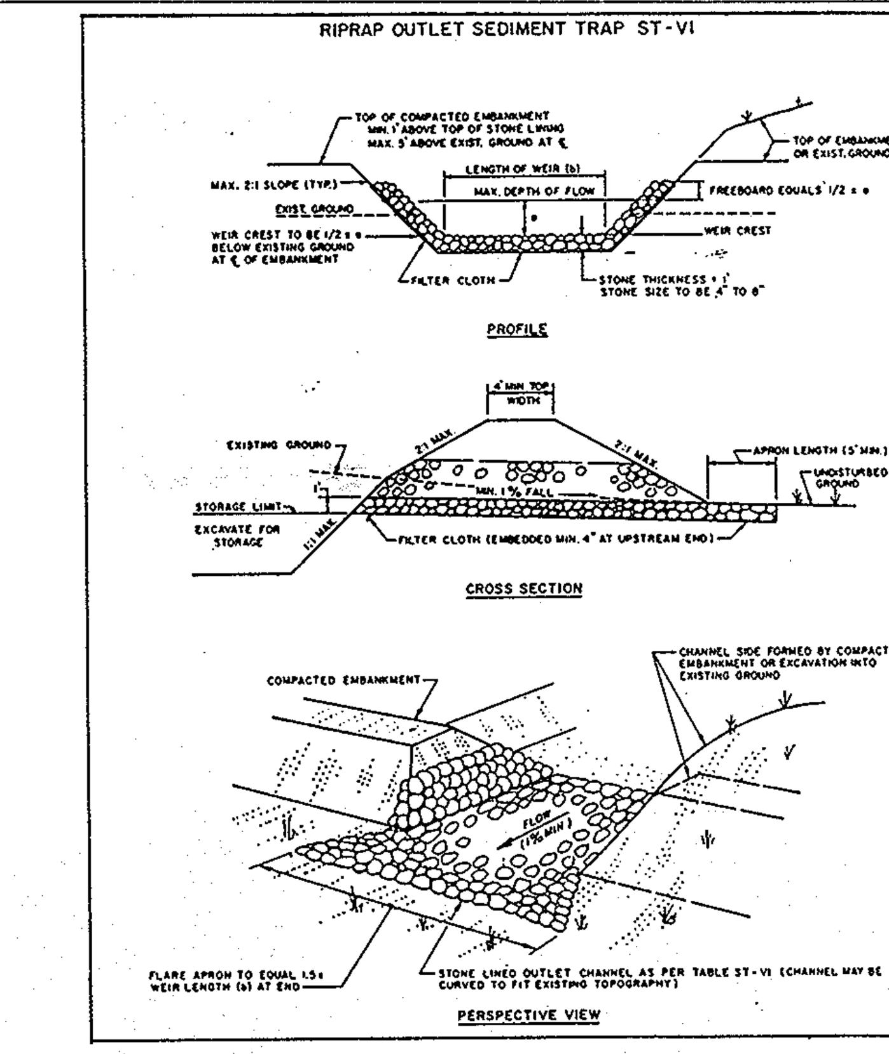
FOR REV 3 ONLY



RIPRAP OUTLET SEDIMENT TRAP ST-VI



CONSTRUCTION SPECIFICATIONS FOR ST-VI

1. The area under embankment shall be cleared, grubbed and stripped of any vegetation and root mat. The pool area shall be cleared.
2. The fill material for the embankment shall be free of roots or other woody vegetation as well as over-sized stones, rocks, organic material or other objectionable material. The embankment shall be compacted by traversing with equipment while it is being constructed. Maximum height of embankment shall be five (5) feet, measured at centerline of embankment.
3. All fill slopes shall be 2:1 or flatter; cut slopes 1:1 or flatter.
4. Elevation of the top of any dike directing water into trap must equal or exceed the height of embankment.
5. Storage area provided shall be figured by computing the volume available behind the outlet channel up to an elevation of one (1) foot below the level weir crest.
6. Filter cloth shall be placed over the bottom and sides of the outlet channel prior to placement of stone. Sections of fabric must overlap at least one (1) foot with section nearest the entrance placed on top. Fabric shall be embedded at least six (6) inches into existing ground at entrance of outlet channel.
7. Stone used in the outlet channel shall be four (4) to eight(8) inches (riprap). To provide a filtering effect, a layer of filter cloth shall be embedded one (1) foot back into the upstream face of the outlet stone or a one (1) foot thick layer of two (2) inch or finer aggregate shall be placed on the upstream face of the outlet.
8. Sediment shall be removed and trap restored to its original dimensions when the sediment has accumulated to 1/2 the design depth of the trap. Removed sediment shall be deposited in a suitable area and in such a manner that it will not erode.
9. The structure shall be inspected after each rain and repaired as needed.
10. Construction operations shall be carried out in such a manner that erosion and water pollution are minimized.
11. The structure shall be removed and the area stabilized when the drainage area has been properly stabilized.
12. Drainage area for this practice is limited to 15 acres or less.

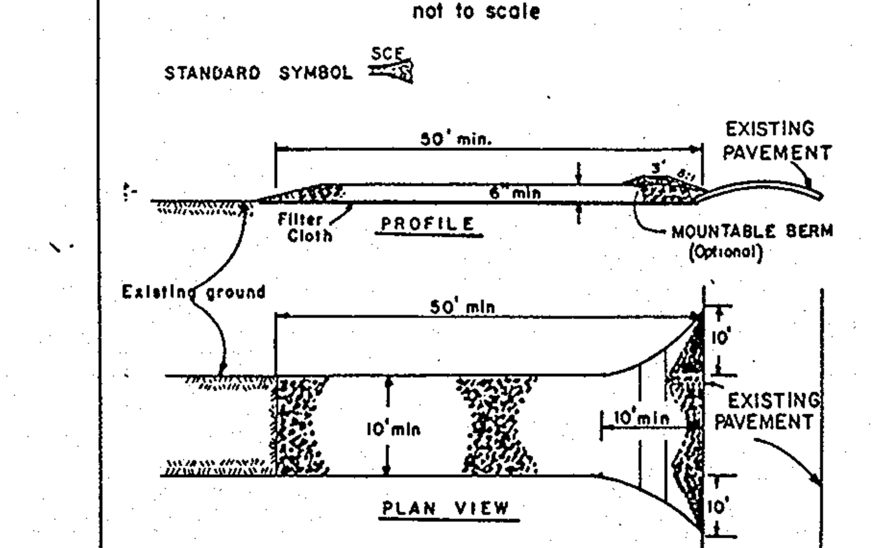
SEDIMENT CONTROL NOTES:

1. A MINIMUM OF 24 HOURS NOTICE MUST BE GIVEN TO THE HOWARD COUNTY OFFICE OF INSPECTIONS AND PERMITS PRIOR TO THE START OF ANY CONSTRUCTION (992-2437).
2. ALL VEGETATIVE AND STRUCTURAL PRACTICES ARE TO BE INSTALLED ACCORDING TO THE PROVISIONS OF THIS PLAN AND ARE TO BE IN CONFORMANCE WITH THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.
3. FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED WITHIN; a) 7 CALENDAR DAYS FOR ALL PERIMETER SEDIMENT CONTROL STRUCTURES, DIKES, PERIMETER SLOPES AND ALL SLOPES GREATER THAN 3:1; b) 14 DAYS AS TO ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.
4. ALL SEDIMENT TRAPS/BASINS SHOWN MUST BE FENCED AND WARNING SIGNS POSTED AROUND THEIR PERIMETER IN ACCORDANCE WITH VOL. 1, CHAPTER 12, OF THE HOWARD COUNTY DESIGN MANUAL, STORM DRAINAGE.
5. ALL DISTURBED AREAS MUST BE STABILIZED WITHIN THE TIME PERIOD SPECIFIED ABOVE IN ACCORDANCE WITH THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL FOR PERMANENT SEEDINGS (SEC. 51) SOD (SEC. 54), TEMPORARY SEEDING (SEC. 50) AND MULCHING (SEC. 52). TEMPORARY STABILIZATION WITH MULCH ALONE CAN ONLY BE DONE WHEN RECOMMENDED SEEDING DATES DO NOT ALLOW FOR PROPER GERMINATION AND ESTABLISHMENT OF GRASSES.
6. ALL SEDIMENT CONTROL STRUCTURES ARE TO REMAIN IN PLACE AND ARE TO BE MAINTAINED IN OPERATIVE CONDITION UNTIL PERMISSION FOR THEIR REMOVAL HAS BEEN OBTAINED FROM THE HOWARD COUNTY SEDIMENT CONTROL INSPECTOR.
7. SITE ANALYSIS:

TOTAL AREA OF SITE	123.2	ACRES
AREA DISTURBED	17.2	ACRES
AREA TO BE ROOFED OR PAVED	8.0	ACRES
AREA TO BE VEGETATIVELY STABILIZED	9.2	ACRES
TOTAL CUT	15,000	CU.YDS.
TOTAL FILL	15,000	CU.YDS.
OFFSITE WASTE/BORROW AREA LOCATION	N/A	CU.YDS.

8. ANY SEDIMENT CONTROL PRACTICE WHICH IS DISTURBED BY GRADING ACTIVITY FOR PLACEMENT OF UTILITIES MUST BE REPAIRED ON THE SAME DAY OF DISTURBANCE.
9. ADDITIONAL SEDIMENT CONTROLS MUST BE PROVIDED, IF DEEMED NECESSARY BY THE HOWARD COUNTY DPW SEDIMENT CONTROL INSPECTOR.
10. ON ALL SITES WITH DISTURBED AREAS IN EXCESS OF 2 ACRES, APPROVAL OF THE INSPECTION AGENCY SHALL BE REQURSTED UPON COMPLETION OF INSTALLATION OF PERIMETER EROSION AND SEDIMENT CONTROLS, BUT BEFORE PROCEEDING WITH ANY OTHER EARTH DISTURBANCE OR GRADING. OTHER BUILDING OR GRADING INSPECTION APPROVALS MAY NOT BE AUTHORIZED UNTIL THIS INITIAL APPROVAL BY THE INSPECTION AGENCY IS MADE.

STABILIZED CONSTRUCTION ENTRANCE
not to scale



CONSTRUCTION SPECIFICATIONS

1. Stone Size - Use 2" stone, or reclaimed or recycled concrete equivalent.
2. Length - As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum length would apply).
3. Thickness - Not less than six (6) inches.
4. Width - Ten (10) foot minimum, but not less than the full width at points where ingress or egress occurs.
5. Filter Cloth - Will be placed over the entire area prior to placing of stone. Filter will not be required on a single family residence lot.
6. Surface Water - All surface water flowing or diverted toward construction entrances shall be piped across the entrance. If piping is impractical, a mountable berm with 5:1 slopes will be permitted.
7. Maintenance - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of-way. This may require periodic top dressing with additional stone as conditions demand and repair and/or cleanout of any measures used to trap sediment. All sediment spilled, dropped, washed or tracked onto public rights-of-way must be removed immediately.
8. Washing - Wheels shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with stone and which drains into an approved sediment trapping device.
9. Periodic inspection and needed maintenance shall be provided after each rain.

PERMANENT SEEDING NOTES:

APPLY TO GRADED OR CLEARED AREA NOT SUBJECT TO IMMEDIATE FURTHER DISTRUBANCE WHERE A PERMANENT LONG-LIVED VEGETATIVE COVER IS NEEDED.

SEEDBED PREPARATION: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE MEANS BEFORE SEEDING, IF NOT PREVIOUSLY LOOSENED.
SOIL AMENDMENTS: IN LIEU OF SOIL TEST RECOMMENDATIONS, USE ONE OF THE FOLLOWING SCHEDULE.
1) PREFERRED - APPLY 2 TONS PER ACRE DOLOMITIC LIMESTONE (92 LBS/1000 SQ.FT.) AND 600 LBS PER ACRE 10-10-10 FERTILIZER (14 LBS/1000 SQ.FT.) BEFORE SEEDING. HARROW OR DISC INTO UPPER THREE-INCHES OF SOIL. AT TIME OF SEEDING, APPLY 400 LBS. PER 30-0-0 UREAFORM FERTILIZER (9 LBS/1000 SQ.FT.)
2) ACCEPTABLE - APPLY 2 TONS PER ACRE DOLOMITIC LIMESTONE (92 LBS/1000 SQ.FT.) AND 1000 LBS. PER ACRE 10-10-10 FERTILIZER (23 LBS./1000 SQ.FT.) BEFORE SEEDING. HARROW OR DISC INTO UPPER THREE-INCHES OF SOIL.

SEEDING: FOR THE PERIODS MARCH 1 THRU APRIL 30, AND AUGUST 1 THRU OCTOBER 15, SEED WITH 60 LBS. PER ACRE (1.4 LBS/1000 SQ.FT.) OF KENTUCKY 31 TALL FESCUE. FOR THE PERIOD MAY 1 THRU JULY 31, SEED WITH 60 LBS. KENTUCKY 31 TALL FESCUE PER ACRE AND 2 LBS. PER ACRE (.05 LBS/1000 SQ.FT.) OF WEEPING LOVEGRASS. DURING THE PERIOD OF OCTOBER 16 THRU FEBRUARY 28, PROTECT SITE BY: OPTION (1) 2 TONS PER ACRE OF WELL ANCHORED STRAW MULCH AND SEED AS SOON AS POSSIBLE IN THE SPRING. OPTION (2) USE SOD. OPTION (3) SEED WITH 60 LBS/ACRE KENTUCKY 31 TALL FESCUE AND MULCH WITH 2 TONS/ACRE WILL ANCHORED STRAW.
MULCHING: APPLY 1 1/2 TO 2 TONS PER ACRE (70 TO 90 LBS/1000 SQ.FT.) OR UNROTTED SMALL GRAIN STRAW IMMEDIATELY AFTER SEEDING. ANCHOR MULCH IMMEDIATELY AFTER APPLICATION USING MULCH ANCHORING TOOL OR 218 GALLONS PER ACRE (5 GAL/1000 SQ. FT.) OF EMULSIFIED ASPHALT ON FLAT AREAS. ON SLOPES 8 FEET OR HIGHTER, USE 348 GALLONS PER ACRE (8 GAL/1000 SQ.FT.) FOR ANCHORING.
MAINTENANCE: INSPECT ALL SEEDED AREAS AND MAKE NEEDED REPAIRS, REPLACEMENTS AND RESEEDINGS.

TEMPORARY SEEDING NOTES:

APPLY TO GRADED OR CLEARED AREAS LIKELY TO BE REDISTURBED WHERE A SHORT-TERM VEGETATIVE COVER IS NEEDED.

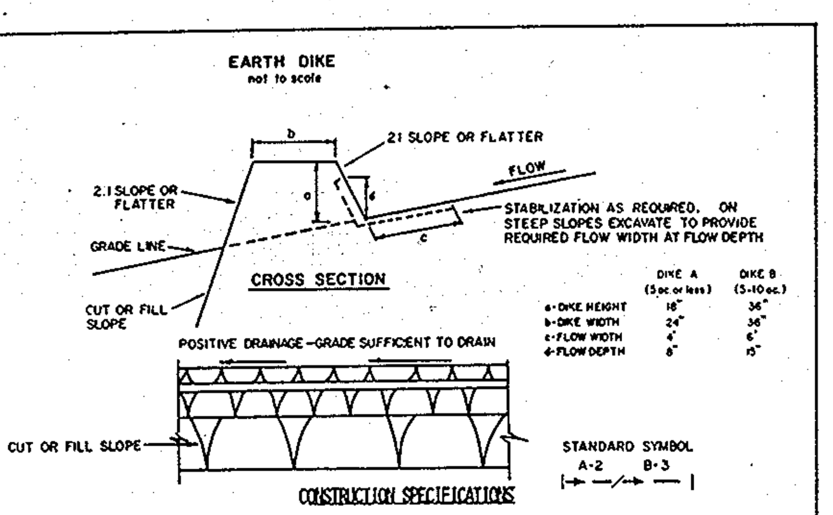
SEEDBED PREPARATION: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE MEANS BEFORE SEEDING, IF NOT PREVIOUSLY LOOSENED.
SOIL AMENDMENTS: APPLY 600 LBS PER ACRE 10-10-10 FERTILIZER (14 LBS/1000 SQ.FT.)
SEEDING: FOR PERIODS MARCH 1 THRU APRIL 30 AND FROM AUGUST 15 THRU NOVEMBER 15, SEED WITH 2 1/2 BUSHEL PER ACRE OF ANNUAL RYE (3.2 LBS/1000 SQ.FT.). FOR THE PERIOD MAY 1 THRU AUGUST 14, SEED WITH 3 LBS PER ACRE OF WEEPING LOVEGRASS (.07 LBS/1000 SQ.FT.). FOR THE PERIOD NOVEMBER 16 THRU FEBRUARY 28, PROTECT SITE BY APPLYING 2 TONS PER ACRE OF WELL ANCHORED STRAW MULCH AND SEED AS SOON AS POSSIBLE IN THE SPRING, OR USE SOD.
MULCHING: APPLY 1 1/2 TO 2 TONS PER ACRE (70 TO 90 LBS/1000 SQ.FT.) OF UNROTTED SMALL GRAIN STRAW IMMEDIATELY AFTER SEEDING. ANCHOR MULCH IMMEDIATELY AFTER APPLICATION USING MULCH ANCHORING TOOL OR 218 GAL PER ACRE (5 GAL/1000 SQ.FT.) OF EMULSIFIED ASPHALT ON FLAT AREAS. ON SLOPES, 8 FT. OR HIGHER, USE 348 GAL PER ACRE (8 GAL/1000 SQ.FT.) FOR ANCHORING.

REFER TO THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL FOR RATE AND METHODS NOT COVERED.

CONSTRUCTION SEQUENCE

1. OBTAIN GRADING PERMIT.
2. NOTIFY MISS UTILITY 48 HOURS BEFORE BEGINNING ANY WORK AT 1-800-257-7777, NOTIFY HOWARD COUNTY OFFICE OF PERMITS AND INSPECTION 24 HOURS BEFORE BEGINNING ANY WORK AT (410)313-1870. REVIEW AND FOLLOW ALL GUIDELINES FOR THIRD PARTY ACTIVITY ON COLONIAL RIGHT-OF-WAY (AS SHOWN ON SHEET 1) WHICH PERTAINS TO THE THREE (3) EXISTING GAS LINES AS SHOWN ON PLAN SHEETS 4 AND 16.
3. INSTALL SEDIMENT CONTROL MEASURES, STONE CONSTRUCTION ENTRANCES, RIP-RAP OUTLET SEDIMENT TRAP, EARTH DIKES TEMPORARY SWALE AND SILT FENCE AND SUPER SILT FENCE. (3)
4. GRADE SITE TO SUBGRADE AND INSTALL STORM DRAINS. CONTRACTOR SHALL INSTALL TEMPORARY 18" FLEXIBLE PIPE FROM S-4 TO THE PROPOSED RIP-RAP OUTLET SEDIMENT TRAP NUMBER 1.
5. THE CONTRACTOR SHALL INSPECT AND PROVIDE NECESSARY MAINTENANCE ON THE SEDIMENT AND EROSION CONTROL STRUCTURES SHOWN HEREON AFTER EACH RAINFALL AND ON A DAILY BASIS.
6. SEDIMENT SHALL BE REMOVED FROM THE SEDIMENT BASINS AND RIP-RAP OUTLET SEDIMENT TRAP WHEN THE CLEANOUT ELEVATIONS, SHOWN ON THE GRADING AND SEDIMENT CONTROL PLAN SHEETS (SDP 94-009) HAVE BEEN REACHED. SEDIMENT MUST BE PLACED UP HILL FROM THESE FACILITIES.
7. INSTALL CURB AND GUTTER AND BASE COURSE.
8. REMOVE SEDIMENT FROM ROADWAYS AND DRESS STONE CONSTRUCTION ENTRANCE AS REQUIRED.
9. FLUSH STORM DRAIN SYSTEM TO REMOVE ANY TRAPPED SEDIMENT.
10. APPLY TACK COAT TO SUB-BASE AND LAY SURFACE COURSE. (3)
11. UPON APPROVAL OF THE SEDIMENT CONTROL INSPECTOR REMOVE PROPOSED RIP-RAP OUTLET SEDIMENT TRAP NO. 1, SUPER SILT FENCE, ALL EARTH DIKES, SILT FENCE, TEMPORARY SWALES, AND 18" TEMPORARY FLEXIBLE PIPE. REMOVE ALL SEDIMENT FROM ALL SEDIMENT BASINS AND DO ALL MODIFICATIONS NECESSARY FOR THE CONVERSION OF BASINS 1, 3, 5, 6 AND 9 TO S.W.M. PONDS 1, 3, 5, 6 AND 9 (SEE S.D.P. 94-009 DWGS FOR ALL CONVERSION REQUIREMENTS).
12. ALL DISTURBANCE DUE TO THE REMOVAL OF THE SEDIMENT CONTROL MEASURES SHALL STABILIZED WITH PERMANENT SEEDING.
13. CONTACT HOWARD COUNTY OFFICE OF PERMITS AND INSPECTIONS AT (410)313-1870 AT COMPLETION.

EARTH DIKE



FLOW CHANNEL STABILIZATION

TYPE OF TREATMENT	CHANNEL GRADE	DIKE A	DIKE B
1	.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE, OR EXCELSIOR; SOD; 2" STONE
3	5.1-8.0%	SEED WITH JUTE, OR SOD; 2" STONE	LINED RIP-RAP 4-8"
4	8.1-20%	LINED RIP-RAP 4-8"	ENGINEERING DESIGN

TEMPORARY SWALE

	SWALE A	SWALE B
C	1'	1'
D	4'	6'

OUTLET AS REQUIRED SEE ITEM 8 BELOW

STANDARD SYMBOL A-2 B-3

CONSTRUCTION SPECIFICATIONS

1. ALL TEMPORARY SWALES SHALL HAVE UNINTERRUPTED POSITIVE GRADE TO AN OUTLET.
2. DIVERTED RUNOFF FROM A DISTURBED AREA SHALL BE CONVEYED TO A SEDIMENT TRAPPING DEVICE.
3. DIVERTED RUNOFF FROM AN UNDISTURBED AREA SHALL OUTLET DIRECTLY INTO AN UNDISTURBED STABILIZED AREA AT NON-EROSIVE VELOCITY.
4. ALL TREES, BRUSH, STUMPS, OBSTRUCTIONS, AND OTHER OBJECTIONABLE MATERIAL SHALL BE REMOVED AND DISPOSED OF SO AS NOT TO INTERFERE WITH THE PROPER FUNCTIONING OF THE SWALE.
5. THE SWALE SHALL BE EXCAVATED OR SHAPED TO LINE, GRADE, AND CROSS SECTION AS REQUIRED TO MEET THE CRITERIA SPECIFIED HEREIN AND BE FREE OF BANK PROJECTIONS OR OTHER IRREGULARITIES WHICH WILL IMPEDE NORMAL FLOW.
6. FILLS SHALL BE COMPACTED BY EARTH MOVING EQUIPMENT.
7. ALL EARTH REMOVED AND NOT NEEDED ON CONSTRUCTION SHALL BE PLACED SO THAT IT WILL NOT INTERFERE WITH THE FUNCTIONING OF THE SWALE.
8. STABILIZATION SHALL BE AS PER THE CHART BELOW:

FLOW CHANNEL STABILIZATION

TYPE OF TREATMENT	CHANNEL GRADE	A (5 AC OR LESS)	B (5 AC - 10 AC)
1	0.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE OR EXCELSIOR
3	5.1-8.0%	SEED WITH JUTE OR EXCELSIOR; SOD	LINED RIP-RAP 4-8" RECYCLED CONCRETE EQUIVALENT
4	8.1-20%	LINED 4-8" RIP-RAP	ENGINEERED DESIGN

9. PERIODIC INSPECTION AND REQUIRED MAINTENANCE MUST BE PROVIDED AFTER EACH RAIN EVENT.

⚠4 STORM WATER MANAGEMENT POND CONSTRUCTION SPECIFICATIONS

These specifications are appropriate to all ponds within the scope of the Standard for practice MD-378. All references to ASTM and AASHTO specifications apply to the most recent version.

Site Preparation

Areas designated for borrow areas, embankment, and structural works shall be cleared, grubbed and stripped of topsoil. All trees, vegetation, roots and other objectionable material shall be removed. Channel banks and sharp breaks shall be sloped to no steeper than 1:1. All trees shall be cleared and grubbed within 15 feet of the toe of the embankment.

Areas to be covered by the reservoir will be cleared of all trees, brush, logs, fences, rubbish and other objectionable material unless otherwise designated on the plans. Trees, brush, and stumps shall be cut approximately level with the ground surface. For dry stormwater management ponds, a minimum of a 25-foot radius around the inlet structure shall be cleared.

All cleared and grubbed material shall be disposed of outside and below the limits of the dam and reservoir as directed by the owner or his representative. When specified, a sufficient quantity of topsoil will be stockpiled in a suitable location for use on the embankment and other designated areas.

EARTH FILL

Material - The fill material shall be taken from approved designated borrow areas. It shall be free of roots, stumps, wood, rubbish, stones greater than 6", frozen or other objectionable materials. Fill material for the center of the embankment, and cut off trench shall conform to Unified Soil Classification GC, SC, CH, or CL, and must have at least 30% passing the #200 sieve. Consideration may be given to the use of other materials in the embankment if designed by a geotechnical engineer. Such special designs must have construction supervised by a geotechnical engineer. Materials used in the outer shell of the embankment must have the stability to support vegetation of the quality required to prevent erosion of the embankment.

Placement - Areas on which fill is to be placed shall be scarified prior to placement of fill. Fill materials shall be placed in maximum 8-inch thick before compaction layers which are to be continuous over the entire length of the fill. The most permeable borrow material shall be placed in the downstream portions of the embankment. The principal spillway must be installed concurrently with fill placement and not excavated into the embankment.

Compaction - The movement of the hauling and spreading equipment over the fill shall be controlled so that the entire surface of each lift shall be traversed by not less than one tread track of the equipment or compaction shall be achieved by a minimum of four complete passes of a sheepsfoot, rubber tired or vibratory roller. Fill material shall contain sufficient moisture such that the required degree of compaction will be obtained with the equipment used. The fill material shall contain sufficient moisture so that if formed into a ball it will not crumble, yet not be so wet that water can be squeezed out.

When required by the reviewing agency the minimum required density shall not be less than 95% of maximum dry density with a moisture content within +2% of the optimum. Each layer of fill shall be compacted as necessary to obtain that density, and is to be certified by the Engineer at the time of construction. All compaction is to be determined by AASHTO Method T-99 (Standard Proctor).

Cut Off Trench - The cutoff trench shall be excavated into impervious material along or parallel to the centerline of the embankment as shown on the plans. The bottom width of the trench shall be governed by the equipment used for excavation, with the minimum width being four feet. The depth shall be at least four feet below existing grade or as shown on the plans. The side slopes of the trench shall be 1 to 1 or flatter. The backfill shall be compacted with construction equipment, rollers, or hand tampers to assure maximum density and minimum permeability.

Embankment Core - The core shall be parallel to the centerline of the embankment as shown on the plans. The top width of the core shall be a minimum of four feet. The height shall extend up to at least the 10 year water elevation or as shown on the plans. The side slopes shall be 1 to 1 or flatter. The core shall be compacted with construction equipment, rollers, or hand tampers to assure maximum density and minimum permeability. In addition, the core shall be placed concurrently with the outer shell of the embankment.

Structure Backfill

Backfill adjacent to pipes or structures shall be of the type and quality conforming to that specified for the adjoining fill material. The fill shall be placed in horizontal layers not to exceed four inches in thickness and compacted by hand tampers or other manually directed compaction equipment. The material needs to fill completely all spaces under and adjacent to the pipe. At no time during the backfilling operation shall driven equipment be allowed to operate closer than four feet, measured horizontally, to any part of a structure. Under no circumstances shall equipment be driven over any part of a concrete structure or pipe, unless there is a compacted fill of 24" or greater over the structure or pipe.

Structure backfill may be flowable fill meeting the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 313 as modified. The mixture shall have a 100-200 psi, 28 day unconfined compressive strength. The flowable fill shall have a minimum pH of 4.0 and a minimum resistivity of 2,000 ohm-cm. Material shall be placed such that a minimum of 6" embedment perpendicular to the outside of the pipe) of flowable fill shall be under bedding, over and, on the sides of the pipe. It only needs to extend up to the spring line for rigid conduits. Average slump of the fill shall be 7" to assure flowability of the material. Adequate measures shall be taken (sand bags, etc.) to prevent floating the pipe. When using flowable fill all metal pipe shall be bituminous coated. Any adjoining soil fill shall be placed in horizontal layers not to exceed four inches in thickness and compacted by hand tampers or other manually directed compaction equipment. The material shall completely fill all voids adjacent to the flowable fill zone. At no time during the backfilling operation shall driven equipment be allowed to operate closer than four feet, measured horizontally, to any part of a structure. Under no circumstances shall equipment be driven over any part of a structure or pipe unless there is a compacted fill of 24" or greater over the structure or pipe. Backfill material outside the structural backfill (flowable fill zone shall be of the type and quality conforming to the specified for the core of the embankment or other embankment materials.

Pipe Conduits

All pipes shall be circular in cross section.

Corrugated Metal Pipe - All of the following criteria shall apply for corrugated metal pipe:

1. Materials - (Polymer Coated steel pipe) - Steel pipes with polymeric coatings shall have a minimum coating thickness of 0.01 inch (10 mil) on both sides of the pipe. This pipe and its appurtenances shall conform to the requirements of AASHTO Specifications M-245 & M-246 with watertight coupling bands or flanges.

Materials - (Aluminum Coated Steel Pipe) - This pipe and its appurtenances shall conform to the requirements of AASHTO Specification M-274 with watertight coupling bands or flanges. Aluminum Coated Steel Pipe, when used with flowable fill or when soil and/or water conditions warrant the need for increased durability, shall be fully bituminous coated per requirements of AASHTO Specification M-190 Type A. Any aluminum coating damaged or otherwise removed shall be replaced with cold applied bituminous coating compound. Aluminum surfaces that are to be in contact with concrete shall be painted with one coat of zinc chromate primer or two coats of asphalt.

Materials - (Aluminum Pipe) - This pipe and its appurtenances shall conform to the requirements of AASHTO Specification M-196 or M-211 with watertight coupling bands or flanges. Aluminum Pipe, when used with flowable fill or when soil and/or water conditions warrant the increased durability, shall be fully bituminous coated per requirements of AASHTO Specification M-190 Type A. Aluminum surfaces that are to be in contact with concrete shall be painted with one coat of zinc chromate primer or two coats of asphalt. Hot dip galvanized bolts may be used for connections. The pH of the surrounding soils shall be between 4 and 9.

2. Coupling bands, anti-seep collars, end sections, etc., must be composed of the same material and coatings as the pipe. Metals must be insulated from dissimilar materials with use of rubber or plastic insulating materials at least 24 mils in thickness.

3. Connections- All connections with pipes must be completely watertight. The drain pipe or barrel connection to the riser shall be welded all around when the pipe and riser are metal. Anti-seep collars shall be connected to the pipe in such a manner as to be completely watertight. Dimple bands are not considered to be watertight.

All connections shall use a rubber or neoprene gasket when joining pipe sections. The end of each pipe shall be pre-ribbed an adequate number of corrugations to accommodate the bandwidth. The following type connections are acceptable for pipes less than 24-inches in diameter: flanges on both ends of the pipe with a circular 3/8 inch closed cell neoprene gasket, prepunched to the flange bolt circle, sandwiched between adjacent flanges; a 12-inch wide standard lap type band with 12-inch wide by 3/8-inch thick closed cell circular neoprene gasket; and a 12-inch wide hugger type band with o-ring gaskets having a minimum diameter of 1/2-inch greater than the corrugation depth. Pipes 24-inches in diameter and larger shall be connected by a 24-inch long annular corrugated band using a minimum of 4 (four) rods and lugs, 2 on each connecting pipe end. A 24-inch wide by 3/8-inch thick closed cell circular neoprene gasket will be installed with 12-inches on the end of each pipe. Flanged joints with 3/8-inch closed cell gaskets the full width of the flange is also acceptable.

Helically corrugated pipe shall have either continuously welded seams or have lock seams with internal caulking or a neoprene band.

4. Bedding - The pipe shall be firmly and uniformly bedded throughout its entire length. Where rock or soft, spongy or other unstable soil is encountered, all such material shall be removed and replaced with suitable earth compacted to provide adequate support.

5. Backfilling shall conform to "Structure Backfill".

6. Other details (anti-seep collars, valves, etc) shall be as shown on the drawings.

Reinforced Concrete Pipe - All of the following criteria shall apply for reinforced concrete pipe:

1. Materials - Reinforced concrete pipe shall have bell and spigot joints with rubber gaskets and shall equal or exceed ASTM C-361.

2. Bedding - Reinforced concrete pipe conduits shall be laid in a concrete bedding/cradle for their entire length. This bedding/cradle shall consist of high slump concrete placed under the pipe and up the sides of the pipe at least 50% of its outside diameter with a minimum thickness of 6 inches. Where a concrete cradle is not needed for structural reasons, flowable fill may be used as described in the "Structure Backfill" section of this standard. Gravel bedding is not permitted.

3. Laying pipe - Bell and spigot pipe shall be placed with the bell end upstream. Joints shall be made in accordance with recommendations of the manufacturer of the material. After the joints are sealed for the entire line, the bedding shall be placed so that all spaces under the pipe are filled. Care shall be exercised to prevent any deviation from the original line and grade of the pipe. The first joint must be located within 4 feet from the riser.

4. Backfilling shall conform to "Structure Backfill".

5. Other details (Anti-seep collars, valves, etc) shall be as shown on the drawings.

Plastic Pipe

The following criteria shall apply for plastic pipe:

1. Materials - PVC pipe shall be PVC-1120 or PVC-1220 conforming to ASTM D-1785 or ASTM D-2241. Corrugated High Density Polyethylene (HDPE) pipe, couplings and fittings shall conform to the following 4" - 10" inch pipe shall meet the requirement of AASHTO M252 Type S, and 12" through 24" inch shall meet the requirement of AASHTO M294 Type S.

2. Joints and connections to anti-seep collars shall be completely watertight.

3. Bedding - The pipe shall be firmly and uniformly bedded throughout its entire length. Where rock or soft, spongy or other unstable soil is encountered, all such material shall be removed and replaced with suitable earth compacted to provide adequate support.

4. Backfilling shall conform to "Structure Backfill".

5. Other details (anti-seep collars, valves, etc) shall be as shown on the drawings.

Drainage Diaphragms - When a drainage diaphragm is used, a registered professional engineer will supervise the design and construction inspection.

Concrete

Concrete shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 414, Mix No. 3.

Rock Riprap

Rock riprap shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 311.

Geotextile shall be placed under all riprap and shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 921.09, Class C.

Care of Water during Construction

All work on permanent structures shall be carried out in areas free from water. The Contractor shall construct and maintain all temporary dikes, levees, cofferdams, drainage channels, and stream diversions necessary to protect the areas to be occupied by the permanent works. The contractor shall also furnish, install, operate, and maintain all necessary pumping and other equipment required for removal of water from various parts of the work and for maintaining the excavations, foundation, and other parts of the work free from water as required or directed by the engineer for constructing each part of the work. After having served their purpose, all temporary protective works shall be removed or leveled and graded to the extent required to prevent obstruction in any degree whatsoever of the flow of water to the spillway or outlet works and so as not to interfere in any way with the operation or maintenance of the structure. Stream diversions shall be maintained until the full flow can be passed through the permanent works. The removal of water from the required excavation and the foundation shall be accomplished in a manner and to the extent that will maintain stability of the excavated slopes and bottom required excavations and will allow satisfactory performance of all construction operations. During the placing and compacting of material in required excavations, the water level at the locations being refilled shall be maintained below the bottom of the excavation at such locations which may require draining the water sumps from which the water shall be pumped.

Stabilization

All borrow areas shall be graded to provide proper drainage and left in a sightly condition. All exposed surfaces of the embankment, spillway, spoil and borrow areas, and berms shall be stabilized by seeding, liming, fertilizing and mulching in accordance with the Natural Resources Conservation Service Standards and Specifications for Critical Area Planting (MD-342) or as shown on the accompanying drawings.

Erosion and Sediment Control

Construction operations will be carried out in such a manner that erosion will be controlled and water and air pollution minimized. State and local laws concerning pollution abatement will be followed. Construction plans shall detail erosion and sediment control measures.

OPERATION AND MAINTENANCE

An operation and maintenance plan in accordance with Local or State Regulations will be prepared for all ponds. As a minimum, the dam inspection checklist located in Appendix A shall be included as part of the operation and maintenance plan and performed at least annually. Written records of maintenance and major repairs needs to be retained in a file. The issuance of a Maintenance and Repair Permit for any repairs or maintenance that involves the modification of the dam or spillway from its original design and specifications is required. A permit is also required for any repairs or reconstruction that involve a substantial portion of the structure. All indicated repairs are to be made as soon as practical.

⚠3 - 12 Pond
SPECIFICATIONS
These specifications are appropriate to all ponds within the scope of the Standard for practice MD-378. All references to ASTM and AASHTO specifications apply to the most recent version.

Site Preparation

Areas designated for borrow areas, embankment, and structural works shall be cleared, grubbed and stripped of topsoil. All trees, vegetation, roots and other objectionable material shall be removed. Channel banks and sharp breaks shall be sloped to no steeper than 1:1.

Areas to be covered by the reservoir will be cleared of all trees, brush, logs, fences, rubbish and other objectionable material unless otherwise designated on the plans. Trees, brush and stumps shall be cut approximately level with the ground surface. For dry stormwater management ponds, a minimum of a 50 foot radius around the inlet structure shall be cleared.

All cleared and grubbed material shall be disposed of outside and below the limits of the dam and reservoir as directed by the owner or his representative. When specified, a sufficient quantity of topsoil will be stockpiled in a suitable location for use on the embankment and other designated areas.

Earth Fill

Material-The fill material shall be taken from approved designated borrow areas. It shall be free of roots, stumps, wood, rubbish, stones greater than 6", frozen or other objectionable materials. Fill material for the center of the embankment, and cut off trench shall conform to Unified Soil Classification GC, SC, CH, or CL. Consideration may be given to the use of other materials in the embankment if design and construction are supervised by a geotechnical engineers.

Placement - Areas on which fill is to be placed shall be scarified prior to placement of fill. Fill materials shall be placed in maximum 8 inch thick (before compaction) layers which are to be continuous over the entire length of the fill. The most permeable borrow material shall be placed in the downstream portion of the embankment. The principal spillway must be installed concurrently with fill placement and not excavated into the embankment.

Compaction - The movement of the hauling and spreading equipment over the fill shall be controlled so that the entire surface of each lift shall be traversed by a minimum of four tread track of the equipment or compaction shall be achieved by a minimum of four complete passes of a sheepsfoot, rubber tired or vibratory roller. Fill material shall contain sufficient moisture such that the required degree of compaction will be obtained with the equipment used. The fill material shall contain sufficient moisture so that if formed into a ball it will not crumble yet not be so wet that water can be squeezed out.

Where a minimum required density is specified it shall not be less than 95% of maximum dry density with a moisture content within +2% of the optimum. Each layer of fill shall be compacted as necessary to obtain that density, and is to be certified by the engineer at the time of construction. All compaction is to be determined by AASHTO Method T-99.

Cut Off Trench - The cutoff trench shall be excavated into impervious material along or parallel to the centerline of the embankment as shown on the plans. The bottom width of the trench shall be governed by the equipment used for excavation, with the minimum width being four feet. The depth shall be at least four feet below existing grade or as shown on the plans. The side slopes of the trench shall be 1 to 1 or flatter. The backfill shall be compacted with construction equipment, rollers or hand tampers to assure maximum density and minimum permeability.

Structure Backfill

Backfill adjacent to pipes or structures shall be of the type and quality conforming to that specified for the adjoining fill material. The fill shall be placed in horizontal layers not to exceed four inches in thickness and compacted by hand tampers or other manually directed compaction equipment. The material needs to fill completely all spaces under and adjacent to the pipe. At no time during the backfilling operation shall driven equipment be allowed to operate closer than four feet, measured horizontally, to any part of a structure. Under no circumstances shall equipment be driven over any part of a concrete structure or pipe, unless there is a compacted fill of 24" or greater over the structure or pipe.

Pipe Conduits

All pipes shall be circular in cross section.

Reinforced Concrete Pipe - All of the following criteria shall apply for reinforced concrete pipe:

1. Materials - Reinforced concrete pipe shall have bell and spigot joints with rubber gaskets and shall equal or exceed ASTM Designation C-361.

2. Bedding - All reinforced concrete pipe conduits shall be laid in a concrete bedding for their entire length. This bedding shall consist of high slump concrete placed under the pipe and up the sides of the pipe at least 10% of its outside diameter with a minimum thickness of 3 inches, or as shown on the drawings.

3. Laying pipe - Bell and spigot pipe shall be placed with the bell end upstream. Joints shall be made in accordance with recommendations of the manufacturer of the material. After the joints are sealed for the entire line, the bedding shall be placed so that all spaces under the pipe are filled. Care shall be exercised to prevent any deviation from the original line and grade of the pipe. The first joint must be located within 2 feet from the riser.

4. Backfilling shall conform to "Structure Backfill".

5. Other details (anti-seep collars, valves, etc) shall be as shown on the drawings.

Polyvinyl Chloride (PVC) Pipe - All of the following criteria shall apply for polyvinyl chloride (PVC) pipe:

1. Materials-PVC pipe shall be PVC-1220 or PVC-1220 conforming to ASTM D-1785 or ASTM D-2241.

2. Joints and connections to anti-seep collars shall be completely watertight.

3. Bedding - The pipe shall be firmly and uniformly bedded throughout its entire length. Where rock or soft spongy or other unstable soil is encountered, all such material shall be removed and replaced with suitable earth compacted to provide adequate support.

4. Backfilling shall conform to "Structure Backfill".

5. Otherdetails (anti-seep collars ,valves, etc) shall be as shown on the drawings.

Concrete

Concrete shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 608, Mix No. 3.

Rock Riprap

Rock riprap shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 905.

The riprap shall be placed to the required thickness in one operation. The rock shall be delivered and placed in a manner that will insure the riprap in place shall reasonably homogeneous with the larger rocks evenly distributed and firmly in contact one to another with the smaller rocks filling the voids between the larger rocks. Filter cloth shall be placed under all riprap and shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 919.12.

Care of Water during Construction

All work on permanent structures shall be carried out in areas free from water. The Contractor shall construct and maintain all temporary dikes, levees, cofferdams, drainage channels, and stream diversions necessary to protect the areas to be occupied by the permanent works. The contractor shall also furnish , install, operate, and maintain all necessary pumping and other equipment required for removal of water from the various parts of the work and for maintaining the excavations, foundation, and other parts of the work free from water as required or directed by the engineer for constructing each part of the work. After having served their purpose, all temporary protective works shall be removed or leveled and graded to the extent required to prevent obstruction in any degree whatsoever of the flow of water to the spillway or outlet works and so as not to interfere in any way with the operation or maintenance of the structure. Stream diversions shall be maintained until the full flow can be passed through the permanent works. The removal of water from the required excavations and the foundation shall be accomplished in a manner and to the extent that will maintain stability of the excavated slopes and bottom of required excavations and will allow satisfactory performance of all construction operations. During the placing and compacting of material in required excavations, the water level at the locations being refilled shall be maintained below the bottom of the excavation at such locations which may require draining the water to sumps from which the water shall be pumped.

Stabilization

All borrow areas shall be graded to provide proper drainage and left in a sightly condition. All exposed surfaces of the embankment, spillway, spoil and borrow areas, and berms shall be stabilized by seeding, liming, fertilizing and mulching in accordance with the Maryland Soil Conservation Service Standards and Specifications for Critical Area Planting (MD-342) or as shown on the accompanying drawings.

Erosion and Sediment Control

Construction operations will be carried out in such a manner that erosion will be controlled and water and air pollution minimized. State and local laws concerning pollution minimized. State and local laws concerning pollution abatement will be followed. Construction plans shall detail erosion-and sediment control measures to be employed during the construction process.

1 STORMWATER MANAGEMENT POND MAINTENANCE SCHEDULE

A. ROUTINE MAINTENANCE

1. Facility shall be inspected annually and after major storms. Inspections should be performed during wet weather to determine if the pond is functioning properly.
2. Top and side slopes of the embankment shall be mowed a minimum of two (2) times a year, once in June and once in September. Other side slopes, the bottom of the pond, and maintenance access should be mowed as needed.
3. Debris and litter next to the outlet structure shall be removed during regular mowing operations and as needed.
4. Visible signs of erosion in the pond as well as rip-rap putlet area shall be repaired as soon as it is noticed.
5. The owner for pond maintenance will be private and will be the responsibility of the developer that builds on the parcel that has the pond located on it.

B. NON-ROUTINE MAINTENANCE

1. Structural components of the pond such as the dam, riser structure and the pipes shall be repaired upon the detectionof any damage. The components should be inspected during maintenance operations.
2. Sediment should be removed when its accumalation significantly reduces the design storage, interferes with the function of the riser, when deemed necessary for aesthetic reasons, or when deemed necessary by the Howard County's Department of Public Works.
3. The owner for pond maintenance will be private and will be the responsibility of the developer that builds on the parcel that has the pond located on it.

1 OPERATION MAINTENANCE AND INSPECTION

INSPECTION OF POND(S) SHOWN HEREON SHALL BE PERFORMED AT LEAST ANNUALLY, IN ACCORDANCE WITH THE CHECKLIST AND REQUIREMENTS CONTAINED WITHIN USDA, SCS "STANDARDS AND SPECIFICATIONS FOR PONDS" (MD-378). THE POND OWNER(S) AND ANY HEIRS, SUCCESSORS, OR ASSIGNS SHALL BE RESPONSIBLE FOR THE SAFETY OF THE POND AND THE CONTINUED OPERATION, SURVEILLANCE, INSPECTION, AND MAINTENANCE, THEREOF. THE POND OWNER(S) SHALL PROMPTLY NOTIFY THE SOIL CONSERVATION DISTRICT OF ANY UNUSUAL OBSERVATIONS THAT MAY BE INDICATIONS OF DISTRESS SUCH AS EXCESSIVE SEEPAGE, TURBID SEEPAGE, SLIDING OR SLUMPING.

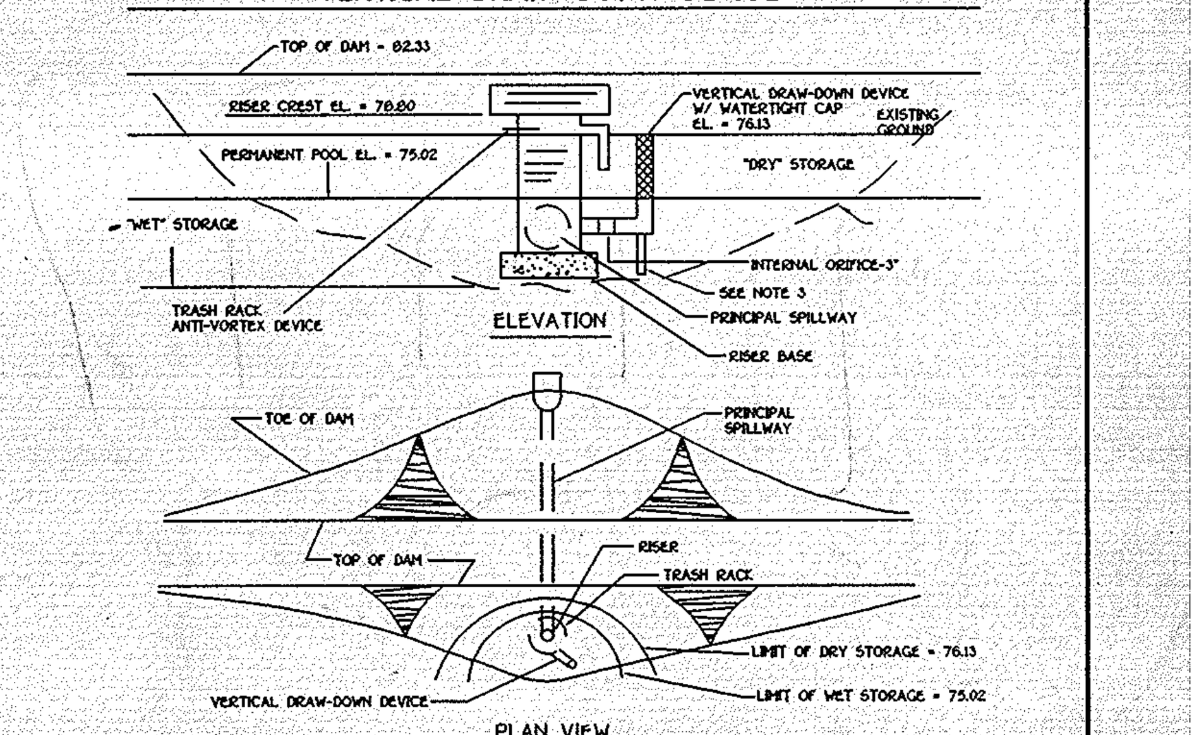
VERTICAL DRAW-DOWN DEVICE



PLAN VIEW

CONSTRUCTION SPECIFICATIONS

1. PERFORATIONS IN THE DRAW-DOWN DEVICE MAY NOT EXTEND INTO THE WET STORAGE.
2. THE TOTAL AREA OF THE PERFORATIONS MUST BE GREATER THAN 2 TIMES THE AREA OF THE INTERNAL ORIFICE.
3. THE PERFORATED PORTION OF THE DRAW-DOWN DEVICE SHALL BE WRAPPED WITH 1/2" HARDWARE CLOTH AND GEOTEXTILE FABRIC. THE GEOTEXTILE FABRIC SHALL MEET THE SPECIFICATIONS FOR GEOTEXTILE CLASS E.
4. PROVIDE SUPPORT OF DRAW-DOWN DEVICE TO PREVENT SAGGING AND FLOATATION. AN ACCEPTABLE PREVENTATIVE MEASURE IS TO STAKE BOTH SIDES OF DRAW-DOWN DEVICE WITH 1" STEEL ANGLE, OR 1" BY 4" SQUARE OR 2" ROUND WOODEN POSTS SET 3' MINIMUM INTO THE GROUND THEN JOINING THEM TO THE DEVICE BY WRAPPING WITH 12 GAUGE MINIMUM WIRE.

Draw-down Device Computation:
$A_o = \pi r^2$
3" dia. orifice opening
$A_o = \pi(1.5/12)^2$
$A_o = 0.491\ ft^2$
Perforated Section=
76.13 − 75.02 = 1.11'
$4A_o = 0.1963\ ft^2$

Use 1.5" Diameter Holes in Perf. Pipe
$A_{1.5"} = 0.0123\ ft^2$
$A_t = (15\ Perf./ft.)(0.0123\ ft^2)(1.11)$
$A_t = 0.2048\ ft^2$

NOTE: SEE RIP-RAP CHANNEL DETAIL SHEET 7.
NOTE: SEE SHEET 26 FOR REMOVABLE PUMPING STATION AND FILTER BAG DETAILS.
NOTE: TOP WIDTH OF DAM IS 12' FOR POND 7A.

SPECIFICATIONS

These specifications are appropriate to all ponds within the scope of this Standard for practice MD-378. All references to ASTM and AASHTO specifications apply to the most recent version.

Site Preparation

Areas designated for borrow areas, embankment, and structural works shall be cleared, grubbed and stripped of topsoil. All trees, vegetation, rocks and other objectionable material shall be removed. Channel banks and sharp breaks shall be sloped no steeper than 1:1.

Areas to be covered by the reservoir will be cleared of all trees, brush, logs, fences, rubbish and other objectionable material unless otherwise designated on the plans. Trees, brush and stumps shall be cut approximately level with the ground surface. For dry stormwater management ponds, a minimum of a 50 foot radius around the inlet structure shall be cleared.

All cleared and grubbed material shall be disposed of outside and below the limits of the dam and reservoir as directed by the owner or his representative. When specified, a sufficient quantity of topsoil will be stockpiled in a suitable location for use on the embankment and other designated areas.

Earth Fill

Material - The fill material shall be taken from approved designated borrow areas. It shall be free of roots, stumps, wood, rubbish, stones greater than 6", frozen or other objectionable materials. Fill material for the center of the embankment and cut-off trench shall conform to Unified Soil Classification GC, SC, CH, or CL. Consideration may be given to the use of other materials in the embankment if design and construction are supervised by a geotechnical engineer.

Placement - Areas on which fill is to be placed shall be scarified prior to placement of fill. Fill materials shall be placed in maximum 8 inch thick (before compaction) layers which are to be continuous over the entire length of the fill. The most permeable borrow material shall be placed in the downstream portions of the embankment. The principal spillway must be installed concurrently with fill placement and not excavated into the embankment.

Compaction - The movement of the hauling and spreading equipment over the fill shall be controlled so that the entire surface of each fill shall be traversed by not less than one tread track of the equipment or compaction shall be achieved by a minimum of four complete passes of a sheepsfoot, rubber tired or vibratory roller. Fill material shall contain sufficient moisture such that the required degree of compaction will be obtained with the equipment used. The fill material shall contain sufficient moisture so that if formed into a ball it will not crumble yet not be so wet that water can be squeezed out.

Where a minimum required density is specified, it shall not be less than 95% of maximum dry density with a moisture content within ±2% of the optimum. Each layer of fill shall be compacted as necessary to obtain that density, and is to be certified by the Engineer at the time of construction. All compaction is to be determined by AASHTO Method T-99.

Cut Off Trench - The cutoff trench shall be excavated into impervious material along or parallel to the centerline of the embankment as shown on the plans. The bottom width of the trench shall be governed by the equipment used for excavation, with the minimum width being four feet. The depth shall be at least four feet below existing grade or as shown on the plans. The side slopes of the trench shall be 1 or 1 flatter. The backfill shall be compacted with construction equipment, rollers, or hand tampers to assure maximum density and minimum permeability.

Structure Backfill

Backfill adjacent to pipes or structures shall be of the type and quality conforming to that specified for the adjoining fill material. The fill shall be placed in horizontal layers not to exceed four inches in thickness and compacted by hand tampers or other manually directed compaction equipment. The material needs to fill completely all spaces under and adjacent to the pipe. At no time during the backfilling operation shall driven equipment be allowed to operate closer than four feet, measured horizontally, to any part of a structure. Under no circumstances shall equipment be driven over any part of a concrete structure or pipe, unless there is a compacted fill of 24" or greater over the structure or pipe.

Pipe Conduits

All pipes shall be circular in cross section.

Corrugated Metal Pipe - All of the following criteria shall apply for corrugated metal pipe:

1. Materials - (Steel Pipe) - This pipe and its appurtenances shall be galvanized and fully bituminous coated and shall conform to the requirements of AASHTO Specification M-190 Type A with watertight coupling bands. Any bituminous coating damaged or otherwise removed shall be replaced with cold applied bituminous coating compound. Steel pipes with polymetric coatings shall have a minimum coating thickness of 0.01 inch (10 mil) on both sides of the pipe. The following coatings or an approved equal may be used: Nevon, Plasti-Core, Slac-Kad, and Bethco-Loy. Coated corrugated steel pipe shall meet the requirements of AASHTO M-245 and M-246.

   Materials - (Aluminum Coated Steel Pipe) - This pipe and its appurtenances shall conform to the requirements of AASHTO Specification M-274 with watertight coupling bands or flanges. Any aluminum coating damaged or otherwise removed shall be replaced with cold applied bituminous coating compound.

   Materials - (Aluminum Pipe) - This pipe and its appurtenances shall conform to the requirements of AASHTO Specification M-196 or M-211 with watertight coupling bands or flanges. Aluminum surfaces that are to be in contact with concrete shall be painted with one coat of zinc chromate primer. Hot dip galvanized bolts may be used for connections. The pH of the surrounding soils shall be between 4 and 9.

2. Coupling bands, anti-seep collars, end sections, etc., must be composed of the same material as the pipe. Metals must be insulated from dissimilar materials with use of rubber or plastic insulating materials at least 24 mils in thickness.

3. Connections - All connections with pipes must be completely watertight. The drain pipe or barrel connection to the riser shall be welded all around when the pipe and riser are metal. Anti-seep collars shall be connected to the pipe in such a manner as to be completely watertight. Dimple bands are not considered to be watertight.

   All connections shall use a rubber or neoprene gasket when joining pipe sections. The end of each pipe shall be re-rolled an adequate number of corrugations to accommodate the band width. The following type connections are acceptable for pipes less than 24" in diameter: flangeless on both ends of the pipe, a 12" wide standard lap type band with 12" wide by 3/8" thick closed cell circular neoprene gasket; and a 12" wide bugger type band with living gaskets having a minimum diameter of 1/2" greater than the corrugation depth. Pipes 24" in diameter and larger shall be connected by a 24" long annular corrugated band using rods and lugs. A 12" wide by 3/8" thick closed cell circular neoprene gasket will be installed on the end of each pipe for a total of 24".

   Helically corrugated pipe shall have either continuously welded seams or have lock seams with internal caulking or a neoprene bead.

4. Bedding - The pipe shall be firmly and uniformly bedded throughout its entire length. Where rock or soft, spongy or other unstable soil is encountered, all such material shall be removed and replaced with suitable earth compacted to provide adequate support.

5. Backfilling shall conform to "Structure Backfill."

6. Other details (anti-seep collars, valves, etc.) shall be as shown on the drawings.

Reinforced Concrete Pipe - All of the following criteria shall apply for reinforced concrete pipe:

1. Materials - Reinforced concrete pipe shall have bell and spigot joints with rubber gaskets and shall equal or exceed ASTM Designation C-361.

2. Bedding - All reinforced concrete pipe conduits shall be laid in a concrete bedding for their entire length. This bedding shall consist of high slump concrete placed under the pipe and up the sides of the pipe at least 10% of its outside diameter with a minimum thickness of 3 inches, or as shown on the drawings.

3. Laying pipe - Bell and spigot pipe shall be placed with the bell end upstream. Joints shall be made in accordance with recommendations of the manufacturer of the material. After the joints are sealed for the cement has set, the bedding shall be placed so that all spaces under the pipe are filled. Care shall be exercised to prevent any deviation from the original line and grade of the pipe. This first joint must be located within 2 feet from the riser.

4. Backfilling shall conform to "Structure Backfill."

5. Other details (anti-seep collars, valves, etc.) shall be as shown on the drawings.

Polyvinyl Chloride (PVC) Pipe - All of the following criteria shall apply for polyvinyl chloride (PVC) pipe:

1. Materials - PVC pipe shall be PVC-1120 or PVC-1220 conforming to ASTM D-1785 or ASTM D-2241.

2. Joints and connections to anti-seep collars shall be completely watertight.

3. Bedding - The pipe shall be firmly and uniformly bedded throughout its entire length. Where rock or soft, spongy or other unstable soil is encountered, all such material shall be removed and replaced with suitable earth compacted to provide adequate support.

4. Backfilling shall conform to "Structure Backfill."

5. Other details (anti-seep collars, valves, etc.) shall be as shown on the drawings.

Concrete

Concrete shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 600, Mix No. 3

Rock Riprap

Rock riprap shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 905.

The riprap shall be placed to the required thickness in one operation. The rock shall be delivered and placed in a manner that will insure the riprap in place shall be reasonably homogeneous with the larger rocks uniformly distributed and firmly in contact one to another with the smaller rocks filling the voids between the larger rocks. Filter cloth shall be placed under all riprap and shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 919.12.

Care of Water during Construction

All work on permanent structures shall be carried out in areas free from water. The Contractor shall construct and maintain all temporary dikes, levees, cofferdams, drainage channels, and stream diversions necessary to protect the areas to be occupied by the permanent works. The contractor shall also furnish, install, operate, and maintain all necessary pumping and other equipment required for removal of water from the various parts of the work and for maintaining the excavations, foundation, and other parts of the work free from water as required or directed by the engineer for constructing each part of the work. After having served their purpose, all temporary protective works shall be removed or leveled and graded to the extent required to prevent obstruction in any degree whatsoever of the flow of water to the spillway or outlet works and so as not to interfere in any way with the operation or maintenance of the structure. Stream diversions shall be maintained until the full flow can be passed through the permanent works. The removal of water from the required excavation and the foundation shall be accomplished in a manner and to the extent that will maintain stability of the excavated slopes and bottom of required excavations and will allow satisfactory performance of all construction operations. During the placing and compacting of material in required excavations, the water level at the locations being refilled shall be maintained below the bottom of the excavation at such locations which may require draining the water to sumps from which the water shall be pumped.

Stabilization

All borrow areas shall be graded to provide proper drainage and left in a slightly condition. All exposed surfaces of the embankment, spillway, spoil and borrow areas, and berms shall be stabilized by seeding, liming, fertilizing and mulching in accordance with the Maryland Soil Conservation Service Standards and Specifications for Critical Area Planting (MD-342) or as shown on the accompanying drawings.

Erosion and Sediment Control

Construction operations will be carried out in such a manner that erosion will be controlled and water and air pollution minimized. State and local laws concerning pollution abatement will be followed. Construction plans shall detail erosion and sediment control measures to be employed during the construction process.

OPERATION AND MAINTENANCE SPECIFICATIONS

I HEREBY CERTIFY THAT I WILL OPERATE AND MAINTAIN THE COMPLETED POND IN ACCORDANCE WITH THE FOLLOWING:

1. PERIODIC INSPECTIONS OF THE FACILITY WILL BE MADE TO IDENTIFY POTENTIAL PROBLEMS THAT MAY AFFECT ITS SAFETY. THESE INSPECTIONS WILL BE MADE AFTER PERIODS OF HEAVY RAINFALL AND AT LEAST TWICE ANNUALLY. INSPECTION REPORTS SHALL BE KEPT UNTIL THE NEXT SUBSEQUENT INSPECTION. INSPECTIONS ITEMS TO BE LOOKED AT INCLUDE

   a) SPILLWAY AND OUTLET WORKS;
   b) RIP-RAP;
   c) VEGETATIVE COVER;
   d) CRACKS IN THE FILL;
   e) SLOPE FAILURES; AND
   f) SEEPAGE AND OTHER SIGNS OF DISTRESS.

2. PROBLEMS IDENTIFIED DURING INSPECTIONS WILL BE PROMPTLY CORRECTED. MAJOR PROBLEMS WILL BE BROUGHT TO THE ATTENTION OF THE SOIL CONSERVATION DISTRICT AND THE DAM SAFETY DIVISION OF THE MARYLAND WATER RESOURCES ADMINISTRATION. AS A VERY MINIMUM, GRASSY VEGETATION WILL BE MAINTAINED IN A DENSE AND HEALTHY STATE. AND WOODY VEGETATION WILL NOT BE PERMITTED TO GROW ON THE EMBANKMENT.

SEDIMENT CONTROL NOTES

1) A MINIMUM OF 24 HOURS NOTICE MUST BE GIVEN TO THE HOWARD COUNTY OFFICE OF INSPECTIONS AND PERMITS PRIOR TO THE START OF ANY CONSTRUCTION (992-2437).
2) ALL VEGETATIVE AND STRUCTURAL PRACTICES ARE TO BE INSTALLED ACCORDING TO THE PROVISIONS OF THIS PLAN AND ARE TO BE IN CONFORMANCE WITH THE STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.
3) FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED WITHIN: a) 7 CALENDAR DAYS FOR ALL PERIMETER SEDIMENT CONTROL STRUCTURES, DIKES, PERIMETER SLOPES AND ALL GREATER THAN 3:1, b) 14 DAYS AS TO ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.
4) ALL SEDIMENT TRAPS/BASINS SHOWN MUST BE FENCED AND WARNING SIGNS POSTED AROUND THEIR PERIMETER IN ACCORDANCE WITH VOL. 1, CHAPTER 12, OF THE MARYLAND COUNTY DESIGN MANUAL, STORM DRAINAGE.
5) ALL DISTURBED AREAS MUST BE STABILIZED WITHIN THE TIME PERIOD SPECIFIED ABOVE IN ACCORDANCE WITH THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL FOR PERMANENT SEEDINGS (SEC. 51) SOD (SEC. 54), TEMPORARY SEEDING (SEC. 50) MULCHING (SEC. 52). TEMPORARY STABILIZATION WITH MULCH ALONE CAN ONLY BE DONE WHEN RECOMMENDED SEEDING DATES DO NOT ALLOW FOR PROPER GERMINATION AND ESTABLISHMENT OF GRASSES.
6) ALL SEDIMENT CONTROL STRUCTURES ARE TO REMAIN IN PLACE AND ARE TO BE MAINTAINED IN OPERATIVE CONDITION UNTIL PERMISSION FOR THEIR REMOVAL HAS BEEN OBTAINED FROM THE HOWARD COUNTY SEDIMENT CONTROL INSPECTOR.
7) SITE ANALYSIS:

TOTAL AREA OF SITE	19.4 ACRES
AREA DISTURBED	11.04 ACRES
AREA TO BE ROOFED OR PAVED	2.1 ACRES
AREA TO BE VEGETATIVELY STABILIZED	11.04 ACRES
TOTAL CUT	116,872 CU.YDS.
TOTAL FILL	141,855 CU.YDS.
OFFSITE WASTE/BORROW AREA LOCATION	TBD CU.YDS.

8) ANY SEDIMENT CONTROL PRACTICE WHICH IS DISTURBED BY GRADING ACTIVITY FOR PLACEMENT OF UTILITIES MUST BE REPAIRED ON THE DAY OF DISTURBANCE.
9) ADDITIONAL SEDIMENT CONTROLS MUST BE PROVIDED, IF DEEMED NECESSARY BY THE HOWARD COUNTY DPW SEDIMENT CONTROL INSPECTOR.
10) ON ALL SITES WITH DISTURBED AREAS IN EXCESS OF 2 ACRES, APPROVAL OF THE INSPECTING AGENCY SHALL BE REQUESTED UPON COMPLETION OF INSTALLATION OF PERIMETER EROSION AND SEDIMENT CONTROL, AND PRIOR TO PROCEEDING WITH ANY OTHER EARTH DISTURBANCE OR GRADING. OTHER BUILDING OR GRADING INSPECTION APPROVALS MAY NOT BE AUTHORIZED UNTIL THIS INITIAL APPROVAL BY THE INSPECTION AGENCY IS MADE.

ESTABLISHMENT SEQUENCE NOTES:
APPLY TO DISTURBED OR CLEARED AREAS ONLY IMMEDIATELY TO COMPLETE FURTHER DISTURBANCE WHERE FINAL GRADING HAS BEEN ACHIEVED.

SEEDBED PREPARATIONS: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE METHOD. REMOVE STONES OVER 1½" IN DIAMETER AND OTHER TRASH.
FERTILIZER AND LIME: APPLY 600 LBS PER ACRE 10-10-10 FERTILIZER OR EQUIVALENT.
SEEDING:
1) APPLY 2 BUSHELS PER ACRE TUFTED ANNUAL RYEGRASS OR WEEPING LOVEGRASS.
2) APPLY 2 TONS PER ACRE UNCHOPPED STRAW MULCH. SECURE MULCH IMMEDIATELY AFTER SEEDING.
MAINTENANCE: INSPECT ALL SEEDED AREAS AND MAKE NEEDED REPAIRS, REPLACEMENTS AND REFERTILIZE.

APPLY TO GRADED OR CLEARED AREAS LIKELY TO BE DISTURBED WHERE A SHORT-TERM VEGETATIVE COVER IS NEEDED.

SEEDBED PREPARATIONS: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE METHOD. REMOVE STONES OVER 1½" IN DIAMETER AND OTHER TRASH.
FERTILIZER AND LIME: APPLY 600 LBS PER ACRE 10-10-10 FERTILIZER OR EQUIVALENT.
SEEDING:
1) APPLY 2 BUSHELS PER ACRE TUFTED ANNUAL RYEGRASS, 40 LBS PER ACRE WEEPING LOVEGRASS OR 50 LBS PER ACRE KOBE LESPEDEZA BETWEEN FEB 15 AND APRIL 15 OR BETWEEN AUG 15 AND SEPT 15.
2) APPLY 2 TONS PER ACRE UNCHOPPED STRAW MULCH AND SECURE IMMEDIATELY AFTER SEEDING.
MAINTENANCE: INSPECT ALL SEEDED AREAS AND MAKE NEEDED REPAIRS, REPLACEMENTS AND REFERTILIZE.

APPLY TO GRADED OR CLEARED AREAS WHICH MAY BE DISTURBED AGAIN WITHIN ONE (1) YEAR.

SEEDBED PREPARATIONS: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE METHOD. REMOVE STONES OVER 1½" IN DIAMETER AND OTHER TRASH.
FERTILIZER AND LIME: APPLY 600 LBS PER ACRE 10-10-10 FERTILIZER OR EQUIVALENT.
SEEDING: FOR THE PERIODS MARCH 1 THRU APRIL 30, AND AUGUST 1 THRU OCTOBER 31: 1) PLANT 50 LBS PER ACRE ANNUAL RYEGRASS AND 50 LBS PER ACRE WEEPING LOVEGRASS OR 100 LBS PER ACRE KOBE LESPEDEZA. 2) APPLY 2 TONS PER ACRE UNCHOPPED STRAW MULCH AND SECURE IMMEDIATELY AFTER SEEDING. FOR THE PERIOD MAY 1 THRU JULY 31: 1) PLANT 50 LBS PER ACRE OF WEEPING LOVEGRASS OR 100 LBS PER ACRE OF KOBE LESPEDEZA. 2) APPLY 2 TONS PER ACRE OF UNCHOPPED STRAW MULCH AND SECURE IMMEDIATELY AFTER SEEDING.
MAINTENANCE: INSPECT ALL SEEDED AREAS AND MAKE NEEDED REPAIRS, REPLACEMENTS AND REFERTILIZE.

APPLY TO DISTURBED AREAS THAT WILL BE EXPOSED FOR 6 MONTHS OR LONGER.

SEEDBED PREPARATIONS: LOOSEN UPPER THREE-INCHES OF SOIL BY RAKING, DISCING OR OTHER ACCEPTABLE METHOD. REMOVE STONES OVER 1½" IN DIAMETER AND OTHER TRASH.
FERTILIZER AND LIME: APPLY 600 LBS PER ACRE 10-10-10 FERTILIZER OR EQUIVALENT.
SEEDING: FOR THE PERIODS MARCH 1 THRU APRIL 30, AND AUGUST 1 THRU OCTOBER 31: 1) PLANT 50 LBS PER ACRE ANNUAL RYEGRASS AND 50 LBS PER ACRE WEEPING LOVEGRASS OR 100 LBS PER ACRE KOBE LESPEDEZA OR 150 LBS PER ACRE SERICEA LESPEDEZA. 2) APPLY 2 TONS PER ACRE UNCHOPPED STRAW MULCH AND SECURE IMMEDIATELY AFTER SEEDING. FOR THE PERIOD MAY 1 THRU JULY 31: 1) PLANT 50 LBS PER ACRE OF WEEPING LOVEGRASS OR 100 LBS PER ACRE OF KOBE LESPEDEZA OR 150 LBS PER ACRE OF SERICEA LESPEDEZA. 2) APPLY 2 TONS PER ACRE UNCHOPPED STRAW MULCH AND SECURE IMMEDIATELY AFTER SEEDING.
MULCHING: APPLY 1½ TO 2 TONS PER ACRE (70 TO 90 LBS/1000 SQ.FT.) OF UNROTTED SMALL GRAIN STRAW IMMEDIATELY AFTER SEEDING. ANCHOR MULCH IMMEDIATELY.
MAINTENANCE: INSPECT ALL SEEDED AREAS AND MAKE NEEDED REPAIRS, REPLACEMENTS AND REFERTILIZE.

REFER TO THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL FOR BASIC AND METHODS NOT COVERED.

CONSTRUCTION SEQUENCE

1. OBTAIN GRADING PERMIT.
2. NOTIFY MISS UTILITY 48 HOURS BEFORE BEGINNING ANY WORK AT 1-800-257-7777. NOTIFY HOWARD COUNTY OFFICE OF PERMITS AND INSPECTION 24 HOURS BEFORE BEGINNING ANY WORK AT (410) 313-1870. REVIEW AND FOLLOW ALL GUIDELINES FOR THIRD PARTY ACTIVITY ON COLONIAL PIPELINE PROPERTY. NOTIFY OWNER OF ANY PROPOSED WORK TO BE DONE IN THE VICINITY OF EXISTING GAS LINES OWNED BY COLONIAL. SHOWN ON PLAN SHEET 3 BEFORE BEGINNING ANY WORK.
3. INSTALL TEMPORARY STREAM CHANNEL DIVERSIONS. SEE DETAIL SHEET 4.
4. INSTALL CULVERTS.
5. INSTALL RIP-RAP AT OUTLETS TO STABILIZE CULVERTS. SEE DETAILS ON SHEET 4 AND SPECIAL ENGINEERING SHEET 6.
6. REMOVE SANDBAG DIVERSIONS FROM DOWNSTREAM TO UPSTREAM TO ALLOW STREAM TO PASS THROUGH CULVERTS.
7. PROVIDE SILT FENCE AT LOW AREAS OF DIVERSION CHANNELS AND REMOVE DIVERSION CHANNEL FROM DOWNSTREAM TO UPSTREAM.
8. ROUGH, TREE PROTECTION FENCE AND MEASURES; SEDIMENT CONTROL BASINS, RIP-RAP OUTLET SEDIMENT TRAPS, SILT FENCE, EARTH DIKES, TEMPORARY SWALES, STONE CONSTRUCTION ENTRANCE AND RIP-RAP AT THE END OF EARTH DIKES DIVERTING SEDIMENT LADEN AS SHOWN ON PLANS. DO NOT CONSTRUCT THE EARTH DIKE FOR BASIN NO. 3 UNTIL THE CULVERT UNDER MARSH RUN ROAD (LABELED FOR PROPOSED CONDITIONS), AND THE EARTH DIKE WEST OF BASIN NO. 1. SILT FENCE IN THIS AREA WILL PROVIDE SEDIMENT CONTROL UNTIL BASIN NO. 3 IS BUILT AND EARTH DIKE IS INSTALLED. THE AREA AT BASIN NO. 3 WILL HAVE TO BUILT UP IN ORDER TO CONSTRUCT BASIN NO. 3 IS INSTALLED AND CONSTRUCT AND INSTALL EARTH DIKE WEST OF BASIN NO. 3, REMOVE SILT FENCE IN THIS AREA.
9. CLEAR AND GRUB SITE.
10. THE CONTRACTOR SHALL INSPECT AND PROVIDE NECESSARY MAINTENANCE OF THE SEDIMENT AND EROSION CONTROL MEASURES AT THE END OF EACH WORKING DAY AND AFTER EACH RAINFALL. ALL EARTH DIKES SHALL HAVE POSITIVE DRAINAGE TO SEDIMENT BASINS OR TRAPS.
11. SEDIMENT SHALL BE REMOVED FROM THE SEDIMENT CONTROL BASINS AND SEDIMENT TRAPS WHEN THE CLEANOUT ELEVATIONS HAVE BEEN REACHED. SEE PROFILES FOR CLEANOUT ELEVATIONS OF SEDIMENT BASINS AND PLAN FOR CLEANOUT ELEVATION OF RIP-RAP OUTLET SEDIMENT TRAPS. SEDIMENT MUST BE PLACED UP HILL FROM THESE STRUCTURES. WHEN REMOVED.
12. GRADE SITE TO SUB-GRADE (SEE ROADWAY GRADING NOTE 1) (LABELED FOR PROPOSED CONDITIONS). AT THE END OF EACH DAY OR PRIOR TO HEAVY RAINFALL THE CONTRACTOR SHALL INSPECT ALL EARTH DIKES PROVIDING THE NECESSARY MAINTENANCE AND REBUILD EARTH DIKES REMOVED DUE TO GRADING.
13. ALL ROADWAY GRADING SHALL MEET THE FOLLOWING:
   a) IN AN AREA WHERE EXCAVATION IS NEEDED WITHIN THE ROAD RIGHT-OF-WAY, EXCAVATION MUST BE MADE WITHIN ONE (1) FOOT OF THE FINAL SUBGRADE.
   b) WHERE FILL IS NEEDED WITHIN THE ROAD RIGHT-OF-WAY, THE FILL SHALL BE A MINIMUM OF TWO (2) FEET BELOW THE FINAL ROAD SUBGRADE.
14. ONCE PROPOSED GRADES ARE ACHIEVED AND ALL AREAS HAVE BEEN STABILIZED WITH PERMANENT SEEDING, WITH THE PERMISSION OF THE SEDIMENT CONTROL INSPECTOR REMOVE ALL SEDIMENT CONTROL MEASURES. EXCEPT SEDIMENT BASINS NO. 1,2,3,5,6 AND 7 WHICH WILL BE CONVERTED TO DRY STORMWATER PONDS. ALL AREAS DISTURBED DUE TO THE REMOVAL OF SEDIMENT CONTROL MEASURES SHALL BE STABILIZED WITH PERMANENT SEEDING.
15. CONTACT HOWARD COUNTY OFFICE OF PERMITS AND INSPECTIONS AT (410)313-1870 AT COMPLETION.

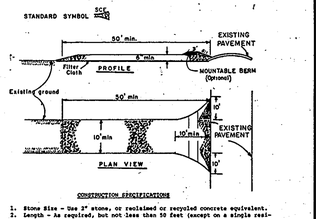
STATE OF MARYLAND — CHARLES C. FISHER — No. 10272 — REGISTERED PROFESSIONAL ENGINEER

STABILIZED CONSTRUCTION ENTRANCE

not to scale

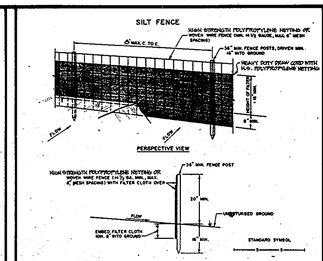
STANDARD SYMBOL — SCE



CONSTRUCTION SPECIFICATIONS

1. Stone Size - Use 2" stone, or reclaimed or recycled concrete equivalent.
2. Length - As required, but not less than 50 feet (except on a single residence lot where a 30 foot minimum length would apply).
3. Thickness - Not less than six (6) inches.
4. Width - Ten (10) foot minimum, but not less than the full width at points where ingress or egress occurs.
5. Filter Cloth - Will be placed over the entire area prior to placing of stone. Filter will not be required on a single family residence lot.
6. Surface Water - All surface water flowing or diverted toward construction entrances shall be piped across the entrance. If piping is impractical, a mountable berm with 5:1 slopes will be permitted.
7. Maintenance - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of-way. This may require periodic top dressing with additional stone as conditions demand and repair and/or cleanout of any measures used to trap sediment. All sediment spilled, dropped, washed or tracked onto public rights-of-way must be removed immediately.
8. When washing is allowed, it shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with crushed stone and which drains into an approved sediment trapping device.
9. Periodic inspection and needed maintenance shall be provided after each rain.

SILT FENCE

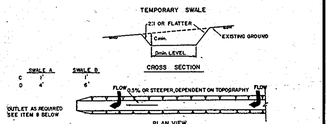


CONSTRUCTION NOTES FOR FABRICATED SILT FENCE

1. 16GAGE WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES.
2. FILTER CLOTH TO BE FASTENED SECURELY TO 16GAGE WIRE FENCE WITH TIES SPACED EVERY 10' TOP AND MID SECTION.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVERLAPPED BY SIX INCHES AND FOLDED.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN "BULGES" DEVELOP IN THE SILT FENCE.

POSTS: STEEL EITHER T OR U TYPE OR WOOD, MIN. (4x4cal)
FENCE: WOVEN WIRE, (6½ GA. MIN.) WITH 6" MAX. MESH OPENING OR WIRE-REINFORCED POLYPROPYLENE NETTING
FILTER CLOTH: FILTER X, (FORMERLY STAR-GRADE) OR APPROVED EQUAL
PREFABRICATED UNIT: GEOFAB, ENVIROFENCE, OR APPROVED EQUAL.

TEMPORARY SWALE



CONSTRUCTION SPECIFICATIONS

1. ALL TEMPORARY SWALES SHALL HAVE UNINTERRUPTED POSITIVE GRADE TO AN OUTLET.
2. DIVERTED RUNOFF FROM A DISTURBED AREA SHALL BE CONVEYED TO A SEDIMENT TRAPPING DEVICE.
3. DIVERTED RUNOFF FROM AN UNDISTURBED AREA SHALL OUTLET DIRECTLY INTO AN UNDISTURBED STABILIZED AREA AT NON-EROSIVE VELOCITY.
4. ALL TREES, BRUSH, STUMPS, OBSTRUCTIONS, AND OTHER OBJECTIONABLE MATERIAL SHALL BE REMOVED AND DISPOSED OF SO AS NOT TO INTERFERE WITH THE PROPER FUNCTIONING OF THE SWALE.
5. THE SWALE SHALL BE EXCAVATED OR BUILT TO LINE, GRADE, AND CROSS SECTION AS REQUIRED TO MEET THE CRITERIA SPECIFIED HEREIN AND BE FREE OF BANK PROJECTIONS OR OTHER IRREGULARITIES WHICH WILL IMPEDE NORMAL FLOW.
6. FILLS SHALL BE COMPACTED BY EARTH MOVING EQUIPMENT.
7. ALL EARTH REMOVED AND NOT NEEDED ON CONSTRUCTION SHALL BE PLACED SO THAT IT WILL NOT INTERFERE WITH THE PROPER FUNCTION OF THE SWALE.
8. STABILIZATION SHALL BE AS PER THE CHART BELOW:

FLOW CHANNEL STABILIZATION

TYPE OF TREATMENT	CHANNEL GRADE	A (≤ or Less)	B (≤ or - 30 ac)
1	0.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE OR EXCELSIOR
3	5.1-8.0%	SEED WITH JUTE OR EXCELSIOR	LINED RIP-RAP 6-8"
4	8.1-20%	LINED 6-8" RIP-RAP	ENGINEERED DESIGN

9. PERIODIC INSPECTION AND REQUIRED MAINTENANCE MUST BE PROVIDED AFTER EACH RAIN EVENT.

EARTH DIKE

not to scale

	DIKE A (Sediment)	DIKE B (1-10 ac.)
MIN. HEIGHT	18"	24"
MIN. TOP WIDTH	2'	2'
FLOW WIDTH	6'	6'
SIDE SLOPES	2:1	2:1

CONSTRUCTION SPECIFICATIONS

1. ALL DIKES SHALL BE COMPACTED BY EARTHMOVING EQUIPMENT.
2. ALL DIKES SHALL HAVE POSITIVE DRAINAGE TO AN OUTLET.
3. TOP WIDTH MAY BE WIDER AND SIDE SLOPES MAY BE FLATTER IF DESIRED TO FACILITATE CROSSING BY CONSTRUCTION TRAFFIC.
4. FIELD LOCATION SHOULD BE ADJUSTED AS NEEDED TO UTILIZE A STABILIZED SAFE OUTLET.
5. EARTH DIKES SHALL HAVE NO OPENINGS FOR PASSAGE OF WATER UNDER CONDITIONS OF EROSION. RUNOFF SHALL BE DIVERTED TO A SEDIMENT TRAPPING DEVICE SUCH AS A SEDIMENT TRAP OR SEDIMENT BASIN WHERE SEDIMENT CAN BE REMOVED, OR TO A STABILIZED AREA AT NON-EROSIVE VELOCITIES.
6. STABILIZATION SHALL BE: (A) IN ACCORDANCE WITH STANDARD SPECIFICATIONS FOR: SEED AND STRAW MULCH OR STRAW MULCH IF NOT IN SEEDING SEASON, (B) FLOW CHANNEL AS PER THE CHART BELOW.

FLOW CHANNEL STABILIZATION

TYPE OF TREATMENT	CHANNEL GRADE	DIKE A	DIKE B
1	.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE OR EXCELSIOR; SOD; 2" STONE
3	5.1-8.0%	SEED AND STRAW MULCH	LINED RIP-RAP 6-8"
4	8.1-20%	LINED RIP-RAP 6-8"	ENGINEERING DESIGN

A. STONE TO BE 2" INCH STONE, OR RECYCLED CONCRETE EQUIVALENT, IN A LAYER AT LEAST 3 INCHES IN THICKNESS AND BE PRESSED INTO THE SOIL WITH CONSTRUCTION EQUIPMENT.
B. RIP-RAP TO BE 4-8 INCHES IN A LAYER AT LEAST 8 INCHES THICKNESS AND PRESSED INTO THE SOIL.
C. APPROVED EQUIVALENTS CAN BE SUBSTITUTED FOR ANY OF THE ABOVE MATERIALS.
D. PERIODIC INSPECTION AND REQUIRED MAINTENANCE MUST BE PROVIDED AFTER EACH RAIN EVENT.

Construction Specifications

1. The outer pipe should be 48" dia. or shall, in any case, be at least 4" greater in diameter than the center pipe. The outer pipe shall be wrapped with 1/2" hardware cloth to prevent backfill material from entering the perforations.
2. After installing the outer pipe, backfill around outer pipe with 2" aggregate or clean gravel.
3. The inside stand pipe (center pipe) should be constructed by perforating a corrugated or PVC pipe between 12" and 36" in diameter. The perforations shall be 1/2" X 6" slits or 1" diameter holes 6" on center. The center pipe shall be wrapped with 1/2" hardware cloth first, then wrapped again with Geotextile Class C.
4. The center pipe should extend 12" to 18" above the anticipated water surface elevation or riser crest elevation when dewatering a basin.

TYPICAL HEADWALL ATTACHMENT DETAIL
NO SCALE

GENERAL NOTE

SPECIFICATIONS:
DESIGN - AASHTO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES", USING LOAD FACTOR DESIGN.

ALL CONCRETE SHALL BE CLASS A4.

DEFORMED REINFORCING BARS SHALL CONFORM TO ASTM A615. GRADE 60. ALL REINFORCING BAR DIMENSIONS ON THE DETAILED DRAWING ARE TO CENTERS OF BARS EXCEPT WHERE OTHERWISE NOTED AND ARE SUBJECT TO FABRICATION AND CONSTRUCTION TOLERANCES.

DIMENSIONS ON BAR DIAGRAMS ARE OUT-TO-OUT OF BARS. BARS ARE STRAIGHT UNLESS OTHERWISE SHOWN.

THE CENTERS OF MAIN REINFORCING BARS SHALL BE 2" FROM THE FACE OF THE CONCRETE UNLESS OTHERWISE SHOWN.

AT THE CONTRACTOR'S OPTION. WV SERIES BARS MAY BE SPLICED AT THE TOP OF FOOTING IN ORDER TO FACILITATE CONSTRUCTION. SPLICE LENGTHS SHALL BE IN ACCORDANCE WITH TABLE C. NO ADDITIONAL COMPENSATION SHALL BE PROVIDED FOR THE INCREASE IN REINFORCING STEEL QUANTITY DUE TO THE SPLICES.

WHEN CONCRETE PROTECTIVE COATING IS REQUIRED, ALL STEEL SHALL BE EPOXY-COATED.

BEARING CAPABILITY OF FOUNDATIONS SHALL BE 1.5 TONS/SQ. FT. MINIMUM FOR WINGS A-X AND 2 TONS/SQ.FT. MINIMUM FOR WINGS Y - EE.

WEEPHOLES SHALL BE PLACED AT LOWEST POINT FEASIBLE FOR FREE DRAINAGE AWAY FROM WING.

FOUR TYPE I WINGS ARE TO BE USED FOR STRAIGHT CROSSINGS AND SKEWS UP TO 20°. TWO TYPE I AND TWO TYPE II WINGS ARE TO BE USED FOR SKEWS FROM 25° TO 45°. FOR SKEWS ABOVE 45° SPECIAL DESIGN WINGS ARE REQUIRED. THE WINGWALL TO BE USED FOR EACH CULVERT IS SHOWN ON THE BC SERIES SHEETS.

THE DESIGNS SHOWN ARE APPLICABLE FOR A 45° SKEW WITH THE ROADWAY AND OTHER CONDITIONS INDICATED. ANY CHANGE IN THESE CONDITIONS INVALIDATES THESE DESIGNS.

QUANTITIES SHOWN ARE FOR ONE WING.

SPECIFICATIONS

PRECAST BOX CULVERT: AS MANUFACTURED BY ROTONDO/PENN-CAST. PENN CAST PRODUCTS, INC.; 514 TOWNSHIP LINE ROAD, P.O. BOX B, TELFORD, PENNSYLVANIA 18969 - 800-523-2273.
SHAPE: THE SECTION IS A FOUR SIDED BOX SECTION WITH OPEN ENDS TO BE MONOLITHICALLY CAST OF REINFORCED CONCRETE. THE INSIDE SURFACES SHALL BE SMOOTH SO AS NOT TO RESTRICT FLOW THROUGH THE COMPLETED INSTALLATION. CHAMFERED 45°X8" FILLETS SHALL BE MONOLITHICALLY CAST IN ALL FOUR INSIDE CORNERS.
SIZE: VARIES SEE PLAN AND PROFILES. ROOF, FLOOR AND WALL THICKNESS TO BE DETERMINED AT A LATER DATE ONCE STRUCTURAL DESIGN IS PREPARED. STRUCTURAL DESIGN, TO BE PREPARED BY PIPE MANUFACTURER SHALL MEET MARYLAND DEPARTMENT OF TRANSPORTATION SPECIFICATIONS AND BE CERTIFIED BY MARYLAND PROFESSIONAL ENGINEER.
JOINTS: EACH SECTION SHALL HAVE A MALE AND FEMALE END WITH NOT LESS THAN 1½" CONCRETE OVERLAP. EACH SECTION SHALL HAVE A PREPLACED NEOPRENE GASKET CEMENTED TO JOINT SURFACE.
ASSEMBLY HARDWARE: ASSEMBLY HARDWARE MUST BE SUPPLIED TO LIFT AND DRAW SECTIONS TOGETHER (SUPPLIED BY MANUFACTURER).
SUBMITTAL: SHOP DRAWINGS SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL SHOWING REINFORCEMENT SIZE AND LOCATION. DRAWINGS SHALL BE STAMPED BY A REGISTERED PROFESSIONAL ENGINEER AND ACCOMPANIED BY DESIGN CALCULATIONS.
INSPECTION: THE QUALITY OF MATERIALS, THE PROCESS OF MANUFACTURE, AND THE FINISHED BOX SECTIONS SHALL BE SUBJECT TO INSPECTION BY ACI APPROVED LAB PERSONNEL.
PERMISSIBLE VARIATIONS: IN ACCORDANCE WITH ASTM C 789-83.

DESIGN CRITERIA
DESIGN SPECIFICATION: ACI 318, THE LATEST EDITION OF THE "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES" IN AASHTO INCLUDING ALL INTERIMS & HOWARD COUNTY DESIGN MANUAL, VOLUME III, CHAPTER 3. DESIGN INCLUDING ALL INTERIMS.
MATERIAL PROPERTIES: STEEL REINFORCEMENT - ASTM A-615-75, GRADE 60 - CONCRETE MINIMUM COMPRESSIVE STRENGTH - 5000 PSI @ 28 DAYS*
SOIL DATA: UNIT WEIGHT - 120 LB/FT*
RATIO OF LATERAL TO VERTICAL PRESSURE - 0.33
EXTERNAL WATER TABLE - BELOW BOX SECTION INVERT*
EFFECTIVE WEIGHT COEFFICIENT - 1.0*
CAPACITY REDUCTION FACTORS: (FROM ACI 318 CHAPTER 9)
SHEAR - 0.85*, BENDING - 0.90*
LOADING DATA: AS REQUIRED IN LATEST EDITION OF AASHTO INCLUDING ALL INTERIMS & HOWARD COUNTY DESIGN MANUAL, VOLUME III, CHAPTER 3, TRUCK AXLE LOAD HS 27 EARTH COVER - 2' MIN.
IMPACT (VARIABLE WITH DEPTH) SEE AASHTO BRIDGE SPECIFICATIONS - 0 TO 30% UNIFORM INTERNAL PRESSURE - 0.0*
DEPTH OF WATER IN BOX SECTION - EQUAL TO INSIDE HEIGHT*
EXTERNAL GROUND WATER PRESSURE - 0.0*
STRUCTURAL ARRANGEMENT: CONCRETE COVER - 2"

CULVERT NO. 3
NOTES - FULL INVERT & FOOTING PADS

1. N = 9.625 INCHES.
2. MINIMUM ALLOWABLE SOIL-BEARING PRESSURE IS 4,000 LB./SQ. FT. THIS APPLIES SPECIFICALLY FOR WIDTH 'G' BELOW THE RECEIVING CHANNEL. OTHER CONDITIONS MAY BE ACCOMMODATED. CONTACT A CONTECH REGIONAL OFFICE FOR MORE INFORMATION.
3. STRUCTURES WITH FULL INVERTS AND FOOTING PADS ARE LIMITED TO 4 FT. OR LESS MAXIMUM COVER. SPECIAL FULL INVERT AND FOOTING PAD DESIGNS OR SLOTTED CONCRETE FOOTINGS CAN ACCOMMODATE MAXIMUM COVERS SHOWN IN TABLE 1.
4. WEIGHT PER METER OF FULL INVERT INCLUDES RECEIVING CHANNELS, SCALLOP PLATES, NUTS AND BOLTS, AND ALL PLATES FOR HS-20 LOADS.
5. FULL INVERT PLATES ARE 0.100 INCHES THICK. WHEN REACTIONS TO THE INVERT REQUIRE ADDITIONAL THICKNESS, SUPPLEMENTAL PLATES OF THE THICKNESS AND WIDTH LISTED IN TABLE 2 ARE FURNISHED TO BOLT BETWEEN THE FULL INVERT AND THE RECEIVING CHANNEL.
6. INVERT WIDTHS, 20N AND GREATER, ARE TWO-PIECES.
7. WEIGHT PER METER OF FOOTING PADS INCLUDES RECEIVING CHANNELS, NUTS AND BOLTS, AND PLATES FOR HS-20 LOADS.
8. WHEN THE THICKNESS LISTED IS GREATER THAN 0.250 INCHES, THE FOOTING PADS WILL BE TWO OR MORE PIECES EQUALING THE COMPOSITE THICKNESSS REQUIRED. SEE TABLE 3.
9. FLAT SHEET TOEWALLS ARE PROVIDED FOR BOTH END OF STRUCTURES USING A FULL CORRUGATED ALUMINUM INVERT TO HELP PREVENT WATER FROM UNDERMINING THE STRUCTURE.
10. AN ALUMINUM SCALLOP PLATE DOES NOT MAKE A JOINT TIGHT ENOUGH TO PREVENT INFILTRATION OF FINE SILTS AND SANDS. IF THE BACKFILL INCLUDES SUCH MATERIAL, SOME ADDITIONAL STEPS SHOULD BE TAKEN AFTER ASSEMBLY, BUT PRIOR TO BACKFILLING. GEOTEXTILE IS PROVIDED FOR THIS PURPOSE.
11. GROUT SHOULD BE NON-METALLIC, NON-SHRINK MATERIAL AND SHOULD CONTAIN NO CORROSION-PROMOTING AGENTS.
12. THE TOTAL FLOW AREA OF ALL BOX CULVERTS INCLUDES THE AREA FROM THE CROWN TO THE INVERT OR FOOTING PADS IF THE PADS ARE BURIED, A REDUCTION IN THE TOTAL AREA SHOULD BE TAKEN INTO CONSIDERATION.
13. INVERT PLATES OR FOOTING PADS MUST NOT BE OVERLAPPED ON ADJACENT STRUCTURES.
14. STRUCTURES WITH .5 N TO 1.5 N LEG LENGTH REQUIRE FOOTING SPACING OR SLOT WIDTH TO ALLOW CLEARANCE FOR REINFORCING RIB EXTENDING INTO FOOTING SLOT

ENGINEER'S CERTIFICATE

I HEREBY CERTIFY THAT THIS PLAN FOR EROSION AND SEDIMENT CONTROL REPRESENTS A PRACTICAL AND WORKABLE PLAN BASED ON MY PERSONAL KNOWLEDGE OF THE SITE CONDITIONS AND THAT IT WAS PREPARED IN ACCORDANCE WITH THE REQUIREMENTS OF THE HOWARD SOIL CONSERVATION DISTRICT.

SIGNATURE OF ENGINEER — DATE 7/14/95

DEVELOPER'S CERTIFICATE

"I/WE CERTIFY THAT ALL DEVELOPMENT AND CONSTRUCTION WILL BE DONE ACCORDING TO THIS PLAN OF DEVELOPMENT AND PLAN FOR EROSION AND SEDIMENT CONTROL AND THAT ALL RESPONSIBLE PERSONNEL INVOLVED IN THE CONSTRUCTION PROJECT WILL HAVE A CERTIFICATE OF ATTENDANCE AT A DEPARTMENT OF ENVIRONMENT APPROVED TRAINING PROGRAM FOR THE CONTROL OF SEDIMENT AND EROSION BEFORE BEGINNING THE PROJECT. I ALSO AUTHORIZE PERIODIC ONSITE INSPECTION BY THE HOWARD SOIL CONSERVATION DISTRICT OR THEIR AUTHORIZED AGENTS, AS ARE DEEMED NECESSARY."

SIGNATURE OF DEVELOPER — DATE 7-14-95

REVIEWED FOR HOWARD SOIL CONSERVATION DISTRICT AND MEETS TECHNICAL REQUIREMENTS
U.S.D.A. NATURAL RESOURCES CONSERVATION SERVICE — DATE 7/21/95, 03/29/00
THIS DEVELOPMENT IS APPROVED FOR EROSION AND SEDIMENT CONTROL BY THE HOWARD SOIL CONSERVATION DISTRICT.

RETAINING WALL SPECIFICATION GUIDELINES

PART 1: GENERAL

1.01 Description

A. Retaining walls must be constructed under the supervision of a Maryland Registered Professional Engineer.

B. Work includes furnishing and installing concrete modular block retaining wall units to the lines and grades shown on the construction drawings and as specified herein.

C. Work includes preparing foundation soil, furnishing and installing leveling pad, unit fill and reinforced backfill to the lines and grades shown on the construction drawings.

D. Work includes furnishing and installing all related materials required for construction of the retaining wall as shown on the construction drawings.

1.02 Reference Standards

A.	ASTM C 90	Load Bearing Concrete Masonry Units.
B.	ASTM C 140	Sampling and Testing Concrete Masonry Units.
C.	ASTM D 448	Sizes of Aggregate for Road and Bridge Construction.
D.	ASTM D 698	Laboratory Compaction Characteristics using Standard Effort.

1.03 Delivery, Storage and Handling

A. Contractor shall check the materials upon delivery to assure that proper materials have been received.

B. Contractor shall prevent excessive mud, wet cement, epoxy, and similar materials (which may affix themselves) from coming in contact with the materials.

C. Contractor shall protect the materials from damage and exposure to sunlight. Damaged materials shall not be incorporated into the retaining wall structure and backfill.

1.04 Quality Assurance

A. Owner will be responsible for soil testing and construction observations for quality control during earthwork and retaining wall construction operations.

PART 2: MATERIALS

2.01 Definitions

A. Modular Wall Units – KEYSTONE or equivalent modular concrete facing units, machine made from portland cement, water, and mineral aggregates.

B. Structural Geogrid – a structural geogrid formed by a regular network of integrity connected tensile elements with apertures of sufficient size to allow interlocking with surrounding soil, rock, or earth and function primarily as reinforcement.

C. Unit Fill/Drainage Aggregate – drainage aggegrate, such as No. 57 Stone, which is placed within the cells of the modular concrete units and immediately behind the units to a width of at least 12 inches.

D. Reinforced Backfill – Compacted soil which is within the reinforced soil volume as shown on the plans.

E. Excavation Face – The interface between the reinforced backfill and the retained fill. During construction, measures shall be taken to avoid developing a shear plane at this interface.

F. Retained Backfill – On-site material located behind the reinforced zone of soil.

2.02 Concrete Units

A. Concrete segemental units shall conform to the requirements of NCMA TEK 2-4 and have a minimum 28-day compression strength of 4,000 psi. The units shall also pass 150 freeze thaw cycles in water with less than 1% weight loss for samples tested in accordance with ASTM C-1262.

B. KEYSTONE or equivalent units for general wall construction shall be Standard Units. Sculptured face or straight (flat) face may be used.

C. KEYSTONE or equivalent Cap Units for general wall construction may be either angular- or straight-sided units.

2.03 Fiberglass Connecting Pins

A. Connecting pins shall be 1/2" diameter thermoset isopathalic polyester resin-pultruded fiberglass reinforcement rods supplied by the unit manufacturer.

2.04 Construction Adhesive

A. Construction adhesive for Capstones and corner blocks shall be KEYSTONE KapSealTM or equivalent construction adhesive, or an approved equivalent. Material shall conform to ASTM 2339 and shall be supplied by the KEYSTONE or equivalent unit supplier.

2.05 Base Leveling and Pad Material

A. Material shall consist of crushed stone (GA S/B) as shown on the construction drawing. The leveling pad shall be, at a minimum, 6-inches thick. MSHA No. 57 Stone or pea gravel is not permitted.

2.06 Unit Fill

A. Fill for units shall be free draining crushed stone or gravel, 1/2" to 3/4", with no more than 5% passing the No. 50 sieve and conforming to ASTM D 448. Gradation of the unit fill shall be approved by the Geotechnical Engineer, "Pea Gravel" shall not be used. MSHA No. 57 stone may be used.

2.07 Reinforced Backfill

A. Material shall consist of silty sand (SM) or more granular soils per USCS. The material shall contain no particles greater than 2.5 inches in diameter. The material shall constain no more than 35 percent by weight passing the US Standard No. 200 sieve. Other materials may be approved by the Geotechnical Engineer. The contractor shall submit samples and material specifications of the proposed backfill soils (unit fill, pad material, reinforced backfill) to the Geotechnical Engineer for approval.

B. Soil must meet or exceed the friction angle specified in design parameters.

C. Direct shear testing is required for all soil samples used for Reinforced Backfill.

2.08 Structural Geogrid

A. The geogrid identified for the retaining walls consist of the following:
Tensar UX1400 SB
Tensar UX1500 SB

B. Other geogrid may be utilized provided the materials meet or exceed the minimum strength with similar or better strain characteristics of the Tensar geogrid and are approved by the Geotechnical Engineer for use with soil backfill. The material shall be protected from sunlight and weather while stored on site in accordance with the manufacturer's recommendation.

2.09 Geotextile

A. A non-woven geotextile shall be utilized as shown on the plans to provide a filter between the unit fill/drainage aggregate and the reinforced backfill. The geotextile shall conform to the criteria for a Geotextile Class A or Class B (depending on the reinforced backfill material used) according to the Maryland Department of Transportation Standards and Specifications for Construction and Materials, Section 921.09. Where geogrids are located, the geotextile shall be placed as illustrated on the plans. At junctions and ends, the geotextile shall be overlapped at least 12 inches. The geotextile shall be placed so that intimate contact is made between the geotextile and the backfill material. Ripped or otherwise damaged material shall not be used. The material shall be protected from sunlight and weather while stored on site in accordance with the manufacturer's recommendation.

DESIGN PARAMETERS

Characteristics

Configuration:	Battered face wall (4.4%)
Maximum Exposed Height:	Wall "A": 2 feet, 11 inches
	Wall "B": 24 feet, 4 inches
	Wall "C": 21 feet, 8 inches
Backslope Angle:	(2H:1V maximum)
Bearing Capacity:	Minimum 2,000 psf
Wall Embedment:	Varies (16 inches minimum)
Surcharge:	None

Soil Parameters:

Soil Type	Friction Angle	Cohesion	Unit Weight (pcf)
Reinforced fill	32	0	125
Retained soils	30	0	120
Foundation soils	30	0	120

PART 3: CONSTRUCTION

3.01 Excavation

A. Contractor shall excavate to the lines and grades shown on the construction drawings. Contractor shall be careful not to disturb emabankment and foundation materials beyone lines shown.

B. All existing topsoil, rootmat, and other soft or unsuitable materials shall, at a minimum, be removed from the footprint of the retained soil mass.

C. If groundwater is encountered during the excavation of the backslope, a backslope drainage system shall be utilized. The system shall tie into the internal well drainage system to provide adequate release of any water which accumulates behind the reinforced zone.

3.02 Foundation Preparation

A. Foundation shall be excavated as required for leveling pad dimensions shown on the construction drawings, or as directed by the Geotechnical Engineer.

B. The required bearing pressure beneath the footing of the wall must be verified in the field by a qualified representative of the Geotechnical Engineer.

C. Unsuitable soils shall be removed and replaced with approved material.

D. Over-excavated areas shall be backfilled with approved, compacted backfill material or as approved by the Geotechnical Engineer.

3.03 Base Leveling Pad

A. Leveling pad materials shall be placed upon an approved foundation as shown on the construction drawings to a minimum thickness of 6 inches.

B. Aggregate material shall be compacted to provide a dense, level surface on which to place the first course of modular units. Compaction shall be to at least 95% of the maximum dry density as determined by the Standard Proctor Compaction Test (ASTM D 698). Leveling pad shall be prepared and leveled to ensure complete contact of retaining wall unit with base.

3.04 Unit Installation

A. The first course of concrete modular wall units shall be carefully placed on the base leveling pad. Each unit shall be checked for level (in both directions) and alignment.

B. Install fiberglass connecting pins and fill all voids in and around the modular units with unit fill material. Tamp or rod unit fill to ensure that all voids are completely filled.

C. Sweep excess material from top of units and install the next course. Ensure that the units of each course are completely filled, backfilled and compacted prior to proceeding to next course.

D. Place each subsequent course, ensuring that pins protrude into adjoining courses a minimum of 1 inch. Two pins are required per unit. Pull each unit forward to obtain the desired offset (as noted on the plans), away from the fill zone, locking against the pins in the previous course and backfill as the course is completed.

E. Repeat procedure to the extent of wall height. Wall construction shall not exceed 2 courses in height before reinforced backfill is placed.

F. Follow wall erection and unit fill placement closely with any other backfilling required. Compaction of all soils shall be to 95% of the maximum dry density as determined in accordance with ASTM D 698. The top 8 to 12 inches of the reinforced backfill shall be a low permeability soil (impervious soils as described above) to reduce surface water runoff from directly entering the drainage aggregate/unit fill or reinforced soil zones.

G. As appropriate where the wall changes elevation, units can be stepped with the grade or turned into the embankment with a convex return end. Provide appropriate buried units on compacted leveling pad in area of convex return end.

3.05 Geogrid Installation

A. The geogrid type and length (direction perpendicular to the wall face) shall conform to those indicated on the construction drawings. Geogrid shall be laid continuously at the proper elevations and orientation as shown on the construction drawings or as directed by the Geotechnical Engineer. A minimum of 4 inches of soil cover is required between layers of geogrid.

B. Correct orientation (roll direction) of the geogrid shall be verified by the Contractor.

C. The geogrid shall be connected to the modular wall units by placing the geogrid over fiberglass pins and laying the grid back to the fill side.

D. A filtering, non-woven geotextile shall be located between the drainage aggregate/unit fill and the reinforced backfill. The geotextile shall be folded back parallel, above and below the geogrid as necessary to ensure continuous grid placement.

E. The geogrid shall be pulled taut to set the geogrid against the fiberglass pins and to eliminate loose folds in the material. The fill surface shall be level. To tension the geogrid, backfill shall be placed over the geogrid from immediately behind the wall to the back end of the geogrid.

F. No geogrid overlaps will be allowed in any length of geogrid perpendicular to the wall face except at corners or angled locations. The geogrid shall overlap rather than provide no coverage.

3.06 Fill Placement

A. Backfill material shall be placed in 8 inch lifts and compacted to at least 95% of the maximum dry density as determined by the Standard Proctor Compaction Test (ASTM D 698). The in-place moisture content shall be within +/-3% of the optimum moisture content, as determined in accordance with ASTM D 698.

B. Backfill shall be placed, spread and compacted in such a manner that minimizes the development of slack or loss of pretension of the geogrid. Backfill shall be placed in horizontal layers. The excavation face shall be stepped or notched to provide compaction of backfill on a level surface and to increase the interlock between the retained soils and the reinforced backfill.

C. Only hand-operated compaction equipment shall be allowed within 5 feet of the back surface of the KEYSTONE or equivalent units.

D. Backfill shall be placed from immediately behind the wall towards the excavation face/retained soils and compacted to the specifications presented herein with appropriate compaction equipment.

E. Tracked construction equipment shall not be operated directly on the geogrid. A minimum backfill thickness of 6 inches (compacted) is required prior to operation of tracked vehicles over the geogrid. Turning of tracked vehicles shall not be permitted overtop the geogrid.

F. Rubber-tired equipment may pass over the geogrid reinforcement at slow speeds (less than 10 mph). Avoid sudden braking and sharp turning.

G. The suitability of the fill material must be confirmed by a Geotechnical Engineer.

3.07 Cap Installation

A. Provide permanent mechanical connection wall units with KEYSTONE KapSealTM or equivalent construction adhesive. Apply adhesive to top surface of lower unit and place cap unit atop adhesive.

B. Place KEYSTONE or equivalent cap units over projecting pins from the units below. Pull forward to setback position.

C. Backfill and compact to finished grade with Reinforced Backfill.
