HOWARD COUNTY, MARYLAND

DEPARTMENT OF PLANNING AND ZONING DRAWING NO# : P-93-01, S-90-09

General Notes:

1. All construction shall be in accordance with the current *Howard County Design Manual, Volume IV, plus MSHA standards and specifications.*
2. The contractor shall notify the Department of Public Works/Construction Inspection Division at (410) 313-1880 at least five (5) working days prior to the start of work.
3. The contractor shall notify "Miss Utility" at (800) 257-7777 at least 48 hours prior to any excavation work.
4. Project Background:

   Location: Howard County **Tax Map** 31, **Parcel** 206-208-209
   Zoning: R-20
   Election District: 1st
   Section/Area: One
   Total Tract Area: 25.0 Ac.
   Section Area: 25.0 Ac.
   Number of Proposed Lots: 35 Buildable
   Date Preliminary Plan Approved and DPZ Reference#: P-93-01 12/02/93; S-90-09 08/17/89
5. Traffic control devices, markings, and signing shall be in accordance with the latest edition of the Manual on Uniform Traffic Control Devices (MUTCD). All street and regulatory signs shall be in place prior to the placement of any asphalt.
6. Boundary survey prepared by Lavelle & Associates, Inc. dated November, 1992. Vertical contour interval is 2'.
7. Horizontal and vertical datum based on:

   BM #1
   Howard County Control Station 2744003 Elevation 489.218, conc. mon. at surface on hill in power lines between Ilchester Road and Montgomery Road.

   BM #2
   Howard County Control Station 2744005 Elevation 419.625, 3/4" Rebar 0.6' below surface 10' +/- W. edge of Route 103 & 80' +/- N. of center line of Kerger Road.
8. *Street light placement and the type of fixture and pole selected shall be in accordance with Howard County Design Manual, Volume III (1993) and as modified by Guidelines for Street Lights in Residential Developments (June 1993).*
9. Public water and sewer is proposed. Water line connections to Howard County Contract 132-W. Sewer line connections to Howard County #10-1215 Project #S-6089, draining into Kerger Road collection system and pumping station.
10. Extended detention is proposed for Stormwater Management water quality control 2 and 10 year attenuation and 100 year safe pass is proposed for water quantity control.
11. In all roadway fill areas 95% compaction shall be used and shall be done in accordance with A.A.S.H.T.O. T-180.
12. All sidewalk ramps shall be in conformity with the current ADA requirements.
13. A minimum of 20 feet shall be maintained between any street tree and street light.
14. *Street trees to be provided as required by Section 16.124 of the Howard County Subdivision and Land Development Regulations.*
15. *Flood Plain Study by Lavelle and Associates, compiled January 1993, Approved October 21, 1993. P-93-01.*
16. *Wetlands Delineation Study by McCarthy and Associates, compiled September 1992, Approved October 21, 1993. P-93-01.*
17. *Noise Study by Scott Harvey, Acoustical Engineer, compiled October 1992, Approved October 21, 1993. P-93-01.*
18. *Geotechnical Report by Hydro-Terra, Inc. compiled June 30, 1994, Approval pending, submitted with F-94-99 July 8, 1994.*
19. *Existing Utilities field located.*

CONSTRUCTION NOTES FOR FABRICATED SILT FENCE

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES.
2. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24' AT TOP AND MID SECTION.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER THEY SHALL BE OVER-LAPPED BY SIX INCHES AND FOLDED.
4. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED WHEN 'BULGES' DEVELOP IN THE SILT FENCE.

POSTS: STEEL EITHER T OR U TYPE OR 2" HARDWOOD

FENCE: WOVEN WIRE, 14½ GA. 6" MAX. MESH OPENING

FILTER CLOTH: FILTER X, MIRAFI 100X, STABI-LINKA T140N OR APPROVED EQUAL

PREFABRICATED UNIT: GEOFAB, ENVIROFENCE, OR APPROVED EQUAL.

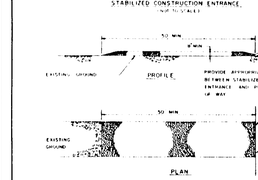
PERSPECTIVE VIEW

U.S. DEPARTMENT OF AGRICULTURE SOIL CONSERVATION SERVICE COLLEGE PARK, MARYLAND	RIPRAP OUTLET SEDIMENT TRAP	STANDARD DRAWING ST-VI

STABILIZED CONSTRUCTION ENTRANCE



CONSTRUCTION SPECIFICATIONS

1. STONE SIZE - USE WSHA SIZE NO 2 (2½"-1½") OR AASHTO DESIGNATION NO 57 SIZE NO 2 (2½"-1½") OR #357 SIZE CRUSHED STONE
2. LENGTH - AS EFFECTIVE, BUT NOT LESS THAN 50 FEET
3. THICKNESS - NOT LESS THAN EIGHT (8) INCHES
4. WIDTH - NOT LESS THAN FULL WIDTH OF ALL POINTS OF INGRESS OR EGRESS
5. WASHING - WHEN NECESSARY, WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHT OF WAY. WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH CRUSHED STONE WHICH DRAINS INTO AN APPROVED SEDIMENT TRAP OR SEDIMENT BASIN. ALL SEDIMENT SHALL BE PREVENTED FROM ENTERING ANY STORM DRAIN, DITCH, OR WATERCOURSE THROUGH USE OF SAND BAGS, GRAVEL BOARDS OR OTHER APPROVED METHODS.
6. MAINTENANCE - THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. THIS WILL REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURES USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.

STANDARD SYMBOL SCE

HOWARD COUNTY, MARYLAND DEPARTMENT OF PUBLIC WORKS Approved 2-20-90 Chief, Bureau of Engineering	STABILIZED CONSTRUCTION ENTRANCE	Date Jan 1993 Drawn by CLT Checked by CLT Scale NONE Sheet 6 of 11

CONSTRUCTION SPECIFICATIONS FOR ST-VI

1. The area under embankment shall be cleared, grubbed and stripped of any vegetation and root mat. The pool area shall be cleared.
2. The fill material for the embankment shall be free of roots or other woody vegetation as well as over sized stones, rocks, organic material or other objectionable material. The embankment shall be compacted by traversing with equipment while it is being constructed. Maximum height of embankment shall be four (4) feet, measured at centerline of embankment.
3. All fill slopes shall be 2:1 or flatter; cut slopes 1:1 or flatter.
4. Elevation of the top of any dike directing water into trap must equal or exceed the height of embankment.
5. Storage area provided shall be figured by computing the volume available behind the outlet channel up to an elevation of one (1) foot below the level weir crest.
6. Filter cloth shall be placed over the bottom and sides of the outlet channel prior to placement of stone. Sections of fabric must overlap at least one (1) foot with section nearest the entrance placed on top. Fabric shall be embedded at least six (6) inches into existing ground at entrance of outlet channel.
7. Stone used in the outlet channel shall be four (4) to eight(8) inches (riprap). To provide a filtering effect, a layer of filter cloth shall be embedded one (1) foot back into the upstream face of the outlet stone or a one (1) foot thick layer of two (2) inch or finer aggregate shall be placed on the upstream face of the outlet.
8. Sediment shall be removed and trap restored to its original dimensions when the sediment has accumulated to 1/2 the design depth of the trap. Removed sediment shall be deposited in a suitable area and in such a manner that it will not erode.
9. The structure shall be inspected after each rain and repaired as needed.
10. Construction operations shall be carried out in such a manner that erosion and water pollution are minimized.
11. The structure shall be removed and the area stabilized when the drainage area has been properly stabilized.
12. Drainage area for this practice is limited to 15 acres or less.

1. A MINIMUM OF 24 HOURS NOTICE MUST BE GIVEN TO THE HOWARD COUNTY OFFICE OF INSPECTION AND PERMITS PRIOR TO THE START OF ANY CONSTRUCTION. (992-2437).
2. ALL VEGETATIVE AND STRUCTURAL PRACTICES ARE TO BE INSTALLED ACCORDING TO THE PROVISIONS OF THIS PLAN AND ARE TO BE IN CONFORMANCE WITH THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.
3. FOLLOWING INITIAL SOIL DISTURBANCE OR REDISTURBANCE, PERMANENT OR TEMPORARY STABILIZATION SHALL BE COMPLETED WITHIN: A) 7 CALENDAR DAYS FOR ALL PERIMETER SEDIMENT CONTROL STRUCTURES, DIKES, PERIMETER SLOPES AND ALL SLOPES GREATER THAN 3:1, B) 14 DAYS AS TO ALL OTHER DISTURBED OR GRADED AREAS ON THE PROJECT SITE.
4. ALL SEDIMENT TRAPS/BASINS SHOWN MUST BE FENCED AND WARNING SIGNS POSTED AROUND THEIR PERIMETER IN ACCORDANCE WITH VOL. 1, CHAPTER 12, OF THE HOWARD COUNTY DESIGN MANUAL, STORM DRAINAGE.
5. ALL DISTURBED AREAS MUST BE STABILIZED WITHIN THE TIME PERIOD SPECIFIED ABOVE IN ACCORDANCE WITH THE 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL FOR PERMANENT SEEDINGS (SEC. 51) AND (SEC. 54), TEMPORARY SEEDING (SEC. 50) AND MULCHING (SEC. 52). TEMPORARY STABILIZATION WITH MULCH ALONE CAN ONLY BE DONE WHEN RECOMMENDED SEEDING DATES DO NOT ALLOW FOR PROPER GERMINATION AND ESTABLISHMENT OF GRASSES.
6. ALL SEDIMENT CONTROL STRUCTURES ARE TO REMAIN IN PLACE AND ARE TO BE MAINTAINED IN OPERATIVE CONDITION UNTIL PERMISSION FOR THEIR REMOVAL HAS BEEN OBTAINED FROM THE HOWARD COUNTY SEDIMENT CONTROL INSPECTOR.
7. SITE ANALYSIS:

TOTAL ARE OF SITE	25.0	ACRES
AREA DISTURBED	18.35	ACRES
AREA TO BE ROOFED OR PAVED	3.28	ACRES
AREA TO BE VEGETATIVELY STABILIZED	15.07	ACRES
TOTAL CUT	30,800	CU. YDS.
TOTAL FILL	30,800	CU. YDS.
OFFSITE WASTE/BORROW AREA LOCATION	N/A	

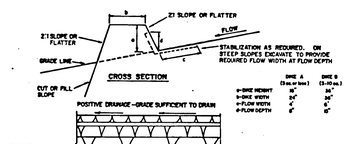
8. ANY SEDIMENT CONTROL PRACTICE WHICH IS DISTURBED BY GRADING ACTIVITY FOR PLACEMENT OF UTILITIES MUST BE REPAIRED ON THE SAME DAY OF DISTURBANCE.

SEQUENCE OF CONSTRUCTION

1. OBTAIN GRADING PERMIT. — 1 Day
2. INSTALL AND STABILIZE CONSTRUCTION ENTRANCE. — 1 Day
3. INSTALL EARTH-DIKES, CUT SWALE, SILT FENCES AND STONE OUTLET SEDIMENT TRAP NO.1 & 2 AND INSTALL STORMWATER POND AND CONVERT TO TEMPORARY SEDIMENT TRAP. — 2 Weeks Note: Swale on Lots 2 & 5 is part of the Sediment Control Scheme.
4. INSTALL CULVERT UNDER LYNN LANE. — 1 Week
5. INSTALL DITCH ALONG LOT 31. PROVIDE EROSION CONTROL MATTING ALONG DITCH TO BY-PASS OFF SITE DRAINAGE. — 1 Week.
6. GRADE AS NECESSARY TO INSTALL STORM DRAIN ALONG LYNN LANE/RADEL COURT TO SWM/SED. POND. — 2 Weeks
7. GRADE REMAINING SITE, NOT TO INCLUDE LOT GRADING ON 7-13 UNTIL SIMPKINS COURT GRADING IS COMPLETE. — 1 Months
8. INSTALL REMAINING UTILITIES. — 2 Months
9. PAVE STREETS. — 1 Week
10. CONSTRUCT HOUSES (EXCEPT FOR LOTS 10 & 11). — 2 Years
11. STABILIZE ENTIRE SITE (CONSTRUCT LOTS 10 & 11). — 1 Week
12. REMOVE SEDIMENT CONTROL DEVICES. — 1 Day.
13. STABILIZE REMAINING AREAS. — 1 Day.
14. FLUSH OUT STORM DRAIN SYSTEM. — 1 Day.
15. CONVERT STORMWATER MANAGEMENT POND. — 1 Week

EARTH DIKE

not to scale



CONSTRUCTION SPECIFICATIONS

1. ALL DIKES SHALL BE COMPACTED BY EARTH-MOVING EQUIPMENT.
2. ALL DIKES SHALL HAVE POSITIVE DRAINAGE TO AN OUTLET.
3. TOP WIDTH MAY BE WIDER AND SIDE SLOPES MAY BE FLATTER IF DESIRED TO FACILITATE CROSSING BY CONSTRUCTION TRAFFIC.
4. FIELD LOCATION SHOULD BE ADJUSTED AS NEEDED TO UTILIZE A STABILIZED SAFE OUTLET. EARTH DIKES SHALL HAVE AN OUTLET THAT FUNCTIONS WITH A MINIMUM OF EROSION. RUNOFF SHALL BE CONVEYED TO A SEDIMENT TRAP OR DEVICE SUCH AS A SEDIMENT TRAP OR SEDIMENT BASIN WHERE EITHER THE DIKE CHANNEL OR THE DRAINAGE AREA ABOVE THE DIKE ARE NOT ADEQUATELY STABILIZED.
5. STABILIZATION SHALL BE: (A) IN ACCORDANCE WITH STANDARD SPECIFICATIONS FOR SEED AND STRAW MULCH OR STRAW MULCH IF NOT IN SEEDING SEASON, (B) FLOW CHANNEL AS PER THE CHART BELOW.

FLOW CHANNEL STABILIZATION

TYPE OF TREATMENT	CHANNEL GRADE	DIKE A	DIKE B
1	.5-3.0%	SEED AND STRAW MULCH	SEED AND STRAW MULCH
2	3.1-5.0%	SEED AND STRAW MULCH	SEED USING JUTE, OR EXCELSIOR; SOD; 2" STONE
3	5.1-8.0%	SEED WITH JUTE, OR SOD; 2" STONE	LINED RIP-RAP 4-8"
4	8.1-20%	LINED RIP-RAP 4-8"	ENGINEERING DESIGN

A. STONE TO BE 2 INCH STONE, OR RECYCLED CONCRETE EQUIVALENT, IN A LAYER AT LEAST 3 INCHES IN THICKNESS AND BE PRESSED INTO THE SOIL WITH CONSTRUCTION EQUIPMENT.
B. RIP-RAP TO BE 4-8 INCHES IN A LAYER AT LEAST 8 INCHES THICKNESS AND PRESSED INTO THE SOIL.
C. ANY EQUIVALENTS CAN BE SUBSTITUTED FOR ANY OF THE ABOVE MATERIALS.
7. PERIODIC INSPECTION AND REQUIRED MAINTENANCE MUST BE PROVIDED AFTER EACH RAIN EVENT.

SEDIMENT CONTROL & POND CONSTRUCTION

( ) By The Developer:

"I/We certify that all development and/or construction will be done according to these plans, and that any responsible personnel involved in the construction project will have a Certificate of Attendance at a Department of the Environment Approved Training Program for the Control of Sediment and Erosion before beginning the project. I shall engage a registered professional engineer to supervise pond construction and provide the Howard Soil Conservation District with an "as-built" plan of the pond within 30 days of completion. I also authorize periodic on-site inspections by the Howard Soil Conservation District."

OPERATION, MAINTENANCE AND INSPECTION

Inspection of the pond(s) shown hereon shall be performed at least annually, in accordance with the checklist and requirements contained within USDA, SCS "Standards And Specifications For Ponds" (MD-378). The pond owner(s) and any heirs, successors, or assigns shall be responsible for the safety of the pond and the continued operation, surveillance, inspection, and maintenance thereof. The pond owner(s) shall promptly notify the Soil Conservation District of any unusual observations that may be indications of distress such as excessive seepage, turbid seepage, sliding or slumping.

REMOVABLE TRASH RACK DETAILS
N.T.S.

REMOVABLE TRASH RACK NOTES:
1. For exposed steel, re-bar shall be hot dipped galvanized, and angles shall be painted with 2 coats of ZRC cold galvanizing compound.
2. Butt weld frame angle, fillet weld bars to angle frame.
3. Provide 5/16" fillet weld at bar crossings.
4. Angle frames and bars shall be fabricated using ASTM A-36 steel.
5. Trash rack shall be mounted to riser with 3/8" dia. hex. head bolts stainless steel.
6. Horizontal bars to be behind vertical bars.
7. All metal surface in contact with concrete shall be coated with bitumastic.
8. All trash racks and their components to be galvanized after fabrication and to be painted Battleship Gray.

STRUCTURAL NOTES

SPECIFICATIONS: All construction and materials shall conform to the latest edition of the Maryland State Highway Administration Specifications dated January 1982, including all revisions and additions thereto.

DESIGN METHOD: Cast-In-Place Concrete Design: Service Load Design Method
Concrete Design: fc = 1,575 p.s.i
Reinforcing Steel Design: fs = 24,000 p.s.i

DESIGN CONDITIONS: 1. 100 year flood elevation
2. 100 psf Live Load

GEOTECHNICAL INFORMATION: A geotechnical engineering report has been prepared for this project and is available for information and design purposes only and may not be sufficient for the preparation of an accurate bid.

The following geotechnical parameters were used for design:
1. Unit weight of wet soil = 120 pcf
2. Coefficient of soil pressure = 0.58
3. Minimum safe bearing capacity = 3000 psf

The design foundation bearing capacity and soil properties shall be verified in the field by a qualified Geotechnical Engineer prior to construction. If the actual bearing capacity or design properties do not meet the design parameters assumed, the Structural Engineer shall be contacted before construction continues. When directed by the Geotechnical Engineer, the subgrade beneath the base slab shall be removed and backfilled with 2000 psi concrete.

CONCRETE: All cast-in-place concrete shall obtain a minimum compressive strength of 3500 psi at 28 days, and shall conform to MSHA Specification Section 918. All exposed corners of concrete shall be chamfered 3/4" X 3/4". All keys are nominal size.

REINFORCING STEEL: All reinforcing steel bars shall conform to ASTM A-615, Grade 60. Concrete cover over all reinforcing shall be 2", unless noted otherwise. All rebar laps, bends and embedment depth shall meet the requirements of ACI 318-89.

CONSTRUCTION DEWATERING: All work performed for permanent structures shall be carried out in areas free from water. Dewatering of the excavations shall be accomplished by methods approved by the Engineer. After having served their purpose, all temporary protective works required by dewatering shall be removed as required to prevent any obstruction to flow of water.

STRUCTURAL BACKFILLING: When directed by the Geotechnical Engineer, undercutting of the soil below the footing and backfilling with materials acceptable to the Geotechnical Engineer shall be performed. Backfilling of the undercut areas shall conform to MD 378. No backfill shall be placed against the cast-in-place walls until the concrete has attained the specified 28-day compressive strength. The static weight of compaction equipment used adjacent to walls shall not exceed 3000 pound.

SHOP DRAWINGS: All shop drawings, working drawings and calculations submitted to the Structural Engineer for review or approval shall be sealed, signed and dated by a Professional Engineer registered in the State of Maryland.

DETAILS FOR OUTFALL PROTECTION
@ STR. #51

Site Preparation

Areas designated for borrow areas, embankment, and structural works shall be cleared, grubbed and stripped of topsoil. All trees, vegetation, roots and other objectionable material shall be removed. Channel banks and sharp breaks shall be sloped to no steeper than 1:1.

Areas to be covered by the reservoir will be cleared of all trees, brush, logs, fences, rubbish and other objectionable material unless otherwise designated on the plans. Trees, brush and stumps shall be cut approximately level with the ground surface. For dry stormwater management ponds, a minimum of a 50 foot radius around the inlet structure shall be cleared.

All cleared and grubbed material shall be disposed of outside and below the limits of the dam and reservoir as directed by the owner or his representative. When specified, a sufficient quantity of topsoil will be stockpiled in a suitable location for use on the embankment and other designated areas.

Earth Fill

Material - The fill material shall be taken from approved designated borrow areas. It shall be free of roots, stumps, wood, rubbish, stones greater than 6", frozen or other objectionable materials. Fill material for the center of the embankment and cut off trench shall conform to Unified Soil Classification GC, SC, CH, or CL. Consideration may be given to the use of other materials in the embankment if design and construction are supervised by a geotechnical engineer.

Placement - Areas on which fill is to be placed shall be scarified prior to placement of fill. Fill materials shall be placed in maximum 8 inch thick (before compaction) layers which are to be continuous over the entire length of the fill. The most permeable borrow material shall be placed in the downstream portions of the embankment. The principal spillway must be installed concurrently with fill placement and not excavated into the embankment.

Compaction - The movement of the hauling and spreading equipment over the fill shall be controlled so that the entire surface of each lift shall be traversed by not less than one tread track of the equipment or compaction shall be achieved by a minimum of four complete passes of a sheepsfoot, rubber tired or vibratory roller. Fill material shall contain sufficient moisture such that the required degree of compaction will be obtained with the equipment used. The fill material shall contain sufficient moisture so that if formed into a ball it will not crumble yet not be so wet that water can be squeezed out.

Where a minimum required density is specified, it shall not be less than 95% of maximum dry density with a moisture content within ±2% of the optimum. Each layer of fill shall be compacted as necessary to obtain that density, and is to be certified by the Engineer at the time of construction. All compaction is to be determined by AASHTO Method T-99.

Cut Off Trench - The cutoff trench shall be excavated into impervious material along or parallel to the centerline of the embankment as shown on the plans. The bottom width of the trench shall be governed by the equipment used for excavation, with the minimum width being four feet. The depth shall be at least four feet below existing grade or as shown on the plans. The side slopes of the trench shall be 1 to 1 or flatter. The backfill shall be compacted with construction equipment, rollers, or hand tampers to assure maximum density and minimum permeability.

Structure Backfill

Backfill adjacent to pipes or structures shall be of the type and quality conforming to that specified for the adjoining fill material. The fill shall be placed in horizontal layers not to exceed four inches in thickness and compacted by hand tampers or other manually directed compaction equipment. The material needs to fill completely all spaces under and adjacent to the pipe. At no time during the backfilling operation shall driven equipment be allowed to operate closer than four feet, measured horizontally, to any part of a structure. Under no circumstances shall equipment be driven over any part of a concrete structure or pipe, unless there is a compacted fill of 24" or greater over the structure or pipe.

Reinforced Concrete Pipe - All of the following criteria shall apply for reinforced concrete pipe:

1. Materials - Reinforced concrete pipe shall have bell and spigot joints with rubber gaskets and shall equal or exceed ASTM Designation C-361. An approved equivalent is AWWA Specification C-302.
2. Bedding - All reinforced concrete pipe conduits shall be laid in a concrete bedding for their entire length. This bedding shall consist of high slump concrete placed under the pipe and up the sides of the pipe at least 10% of its outside diameter with a minimum thickness of 3 inches, or as shown on the drawings.
3. Laying pipe - Bell and spigot pipe shall be placed with the bell end upstream. Joints shall be made in accordance with recommendations of the manufacturer of the material. After the joints are sealed for the entire line, the bedding shall be placed so that all spaces under the pipe are filled. Care shall be exercised to prevent any deviation from the original line and grade of the pipe. The first joint must be located within 2 feet from the riser.
4. Backfilling shall conform to "Structure Backfill."
5. Other details (anti-seep collars, valves, etc.) shall be as shown on the drawings.

Concrete

Concrete shall meet the requirements of Maryland Department of Transportation, State Highway Administration Standard Specifications for Construction and Materials, Section 608, Mix No. 3

Care of Water during Construction

All work on permanent structures shall be carried out in areas free from water. The Contractor shall construct and maintain all temporary dikes, levees, cofferdams, drainage channels, and stream diversions necessary to protect the areas to be occupied by the permanent works. The contractor shall also furnish, install, operate, and maintain all necessary pumping and other equipment required for removal of water from the various parts of the work and for maintaining the excavations, foundation, and other parts of the work free from water as required or directed by the engineer for constructing each part of the work. After having served their purpose, all temporary protective works shall be removed or leveled and graded to the extent required to prevent obstruction in any degree whatsoever of the flow of water to the spillway or outlet works and so as not to interfere in any way with the operation or maintenance of the structure. Stream diversions shall be maintained until the full flow can be passed through the permanent works. The removal of water from the required excavation and the foundation shall be accomplished in a manner and to the extent that will maintain stability of the excavated slopes and bottom of required excavations and will allow satisfactory performance of all construction operations. During the placing and compacting of material in required excavations, the water level at the locations being refilled shall be maintained below the bottom of the excavation at such levels which may require draining the water to sumps from which the water shall be pumped.

Stabilization

All borrow areas shall be graded to provide proper drainage and left in a sightly condition. All exposed surfaces of the embankment, spillway, spoil and borrow areas, and berms shall be stabilized by seeding, liming, fertilizing and mulching in accordance with the Maryland Soil Conservation Service Standards and Specifications for Critical Area Planting (MD-342) or as shown on the accompanying drawings.
