

- 1) A minimum of 34 hours notice must be given to the Howard County Office of Inspection and Permits prior to the start of any construction. (992-2437)
- 2) All vegetated areas shall be protected to be installed according to the provisions of the plan and are to be in conformance with the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.
- 3) Following initial soil disturbance or redistribution, permanent or temporary stabilization shall be completed within 14 days. (a) Sediment control structures, dikes, perimeter slopes and all slopes greater than 3:1, b) 14 days as to all other disturbed or graded areas on the project site.
- 4) All sediment traps/basins should be fenced and warning signs posted around their perimeter in accordance with Vol. 1, Chapter 11 of the HOWARD COUNTY DESIGN MANUAL, Storm Drains.

- 5) All disturbed areas must be stabilized within the time period specified above in accordance with the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL. (Sec. 51) and (Sec. 54), temporary seeding (Sec. 50) and mulching (Sec. 52.) Temporary stabilization with mulch alone can only be done when recommended seeding rates are used for proper germination and establishment of grasses.
- 6) All sediment control structures are to remain in place and are to be maintained in operative condition until permissible for their removal has been obtained from the Howard County Sediment Control Inspector.

7) Site Analysis:  
Area of Site .041 Acres  
Area Disturbed .041 Acres  
Area to be roofed or paved .026 Acres  
Area to be vegetatively stabilized .026 Acres  
Total Cu. yds 300  
Total Fill 300 Cu. yds  
Offsite Waste/borrow area location N/A

- 8) Any sediment control practice which is disturbed by grading activity for placement of utilities must be repaired on the same day of disturbance.
- 9) Additional sediment control must be provided, if deemed necessary by the Howard County DEW sediment control inspector.
- 10) On all sites with disturbed grass in excess of 2 acres, approval of the inspection agency shall be requested upon completion of initial site preparation, erosion and sediment control, and before proceeding with any subsequent disturbance or grading. Other building or grading inspection approvals may not be authorized until this inspection is approved by the inspection agency is made.
- 11) If houses are to be built on individual lots, at random, Single Lot Sediment Control as shown below shall be implemented.
- 12) No sediment control shall be blocked at the end of each day (see detail below). N/A
- 13) The total amount of straw bale/dikes equals 165 L.F.

## CONSTRUCTION SEQUENCE:

- A. Obtain Grading Permit and Install Sediment and Erosion Control Devices and Stabilize.  
B. Excavate for Foundations and Rough Grade & Temporarily Stabilize.  
C. Construct Structures, Sidewalks and Driveways.  
D. Final Grade and stabilize in accordance with Std's & Specs.  
E. Upon approval of the sediment control inspector, remove sediment and erosion controls and stabilize.

- Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.
- Seeded Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.
- Soil Amendments: In lieu of soil test recommendations, use one of the following schedules
- 1) Preferable - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 square ft) and 600 lbs per acre 10-10-10 fertilizer (23 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil. At time of seeding, apply 400 lbs per acre 30-0-0 ureaform fertilizer (9 lbs/1000 sq ft).
  - 2) Acceptable - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 sq ft) and 1000 lbs per acre 10-10-10 fertilizer (23 lbs/1000 sq ft) before seeding. Harrow or disc into upper three inches of soil.

- Seeding - For the periods March 1 thru April 30, and August 1 thru October 15, seed with 60 lbs per acre (1.4 lbs/1000 sq ft) of Kentucky 31 Tall Fescue. For the period May 1 thru July 31, seed with 60 lbs Kentucky 31 Tall Fescue per acre and 2 lbs per acre (0.04 lbs/1000 sq ft) of annual rye grass. During the period August 16 thru February 28, protect site by Optio (1), 2 tons per acre of straw mulch and seed as soon as possible in the spring. Optio (2) use and Optio (3) Seed with 60 lbs acre Kentucky 31 Tall Fescue and mulch with 2 tons/acre well anchored straw.

- Mulching - Apply 1 to 2 tons per acre (70 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq ft).

- Maintenance - Inspect all seeded areas and make needed repairs, replacements and reseedings.

## TEMPORARY SEEDING NOTES

- Apply to graded or cleared areas likely to be redisturbed where a short-term vegetative cover is needed.

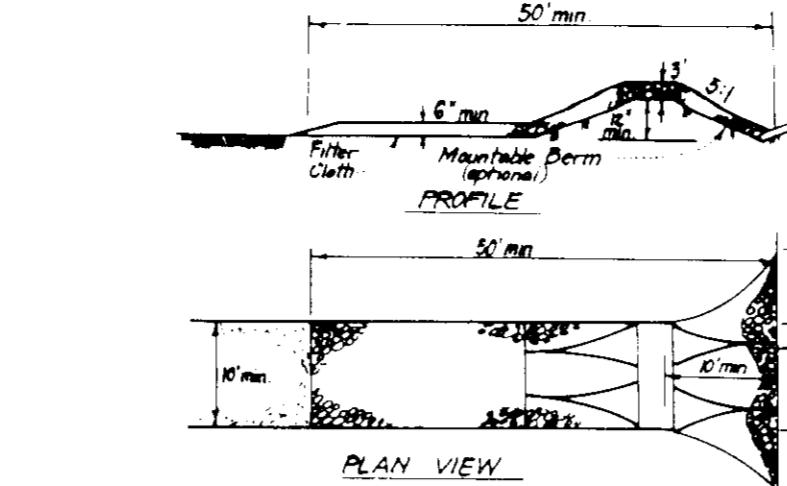

- Seeded Preparation: Loosen upper three inches of soil by raking, discing or other acceptable means before seeding.

- Soil Amendments: Apply 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft).

- Seeding: For periods March 1 thru April 30 and from August 15 thru November 15, seed with 28 bushels per acre of annual rye (3.2 lbs/1000 sq ft). For the period May 1 thru August 14, seed with 3 lbs per acre of weeping lovegrass (.07 lbs/1000 sq ft). For the period November 16 thru February 28, protect site by applying 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring, or use sod.

- Mulching: Apply 1 to 2 tons per acre (70 to 90 lbs/1000 sq ft) of unrotted small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq ft) for anchoring.

- Refer to the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for rate and methods not covered.

## CONSTRUCTION SPECIFICATIONS

1. Stone size: Use 2" stone or rock or recycled concrete equivalent.

2. Length: As required, no less than 10' longer than a perpendicular lot where a 30' lot minimum length is required.

3. Thickness: Not less than six (6) inches.

4. Width: Ten (10') feet minimum, but not less than the full width of points where the stone is required.

5. Filter Cloth: Will be placed over the entire area prior to placing of stone. Filter will not be required on single family residence lot.

6. Surface Water: All surface water flowing or diverted toward construction area shall be controlled by stone. If piping is required, a maximum 6" diameter pipe will be permitted.

7. Maintenance: The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of-way. This may be done by sweeping, washing, or hosing down the entrance, or by sweeping and raking and/or cleanup of any residue used to trap sediment. All sweepings applied, washed, washed off tracked onto public rights-of-way must be removed and disposed of.

8. Weighing: Wheels shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When weighing is required, it shall be done on an area covered with stone and which drains into an approved sediment trapping device.

9. Periodic inspection and needed maintenance shall be provided after each rain.

- PERSPECTIVE VIEW  
CONSTRUCTION SPECIFICATIONS:  
1. Woven wire fence to be fastened securely to fence posts with wire ties or staples.  
2. Fence posts to be driven into ground to never have more than 1/2" of space between post and ground.  
3. When 2 sections of fence cloth join each other they shall be joined by overlapping 6" and fused.  
4. Maintenance shall be done by sweeping, raking, and material removed when "dust" develops in soil fence.
