GENERAL NOTES

- The land included is zoned R-20 per R-20-85 Comprehensive Zoning Plan
- All coordinates shown hereon are based on the Maryland State Grid System and derived from the following Howard County control stations 3440002 & 3440004 - R
- B.R.L. denotes Building Restriction Line
- All roadways are public and existing
- Any damage to County owned rights-of-way shall be corrected at the Developer's expense
- Total area included 12,877 AC
- Total number of lots 33 lots
- Lot coverage 30%
- See Office of Planning and Zoning File numbers 5-88-13 P-88-39, 5-88-30 P-88-52, F-88-263 well in advance of construction
- Existing structures on site are to be removed unless otherwise noted
- Porches or decks, open or enclosed, may project not more than 10 feet into the required front or rear yard, as per Howard County Supplementary Zoning District Regulations Section 12B-A3

SPECIAL NOTES

- Approved road construction plans shall be used for all public utilities
- Public water & sewer shown is for reference only. For more detailed information - see water and sewer plans contract no.
- The water & sewer house connections not included in a Developer's Agreement shall conform to Howard Co Plumbing Code. The on site pipe shall be 1" copper and the SHC shall be 4" iron
- Stormwater management provided for in central facility in approved plans F-88-

CONSTRUCTION SPECIFICATIONS:
 1. When wire fence is to be fastened securely to fence posts with wire ties or staples.
 2. Filter cloth is to be fastened securely to every wire fence with ties spaced every 30" up and down sections.
 3. When 2 sections of filter cloth adjoin each other they shall be wrapped by 6" and folded.
 4. Maintenance shall be performed as needed and material removed when "blow" develops in Silt Fence.

POSTS: Steel, either T or U Type or 2" diameter.
 FENCE: Woven Wire, 1/4" Gauge, 2" Mesh, High Draining.
 FILTER CLOTH: Filter Cloth, 100% Polypropylene, 100% Submicron, 100% Approved.
 PREFABRICATED UNIT: Guards, Environment, or Approval equal.

CONSTRUCTION SPECIFICATIONS:
 1. Bales shall be placed at the top of a slope or on the contour and in a row with ends tightly abutting the adjacent bales.
 2. Each bale shall be embedded in the soil a min of 4" and placed so the bindings are horizontal.
 3. Bales shall be secured in place by either 2 stakes or 1/2" bars driven thru the bale.
 4. The 1st stake in each bale shall be driven thru the previously laid bale at an angle to force the bales together. Stakes shall be driven flush with the top of the bale.
 5. Inspection shall be frequent and repair/replacement shall be made promptly as needed.
 6. Stakes shall be removed when they have served their usefulness so as not to block or impede stream flow or drainage.

CONSTRUCTION SPECIFICATIONS:

- All dikes shall be constructed by earth-moving equipment.
- All dikes shall have positive drainage to an outlet.
- Top width may be wider and side slopes may be flatter if desired, to facilitate cleaning by construction traffic.
- Final location should be adjusted, as needed, to utilize a stabilized site within 5' of the dike.
- Earth dikes shall have an outlet near structure with a minimum of erosion. Runoff shall be conveyed to a sediment trapping device such as a sediment trap or sediment basin where offered. The dike channel or the drainage area above the dike are not subject to stabilization.
- Stabilization shall be: (A) in accordance with standard specifications for seed and straw mulch or straw mulch if not in seeding season, (B) flow channel as per chart below.

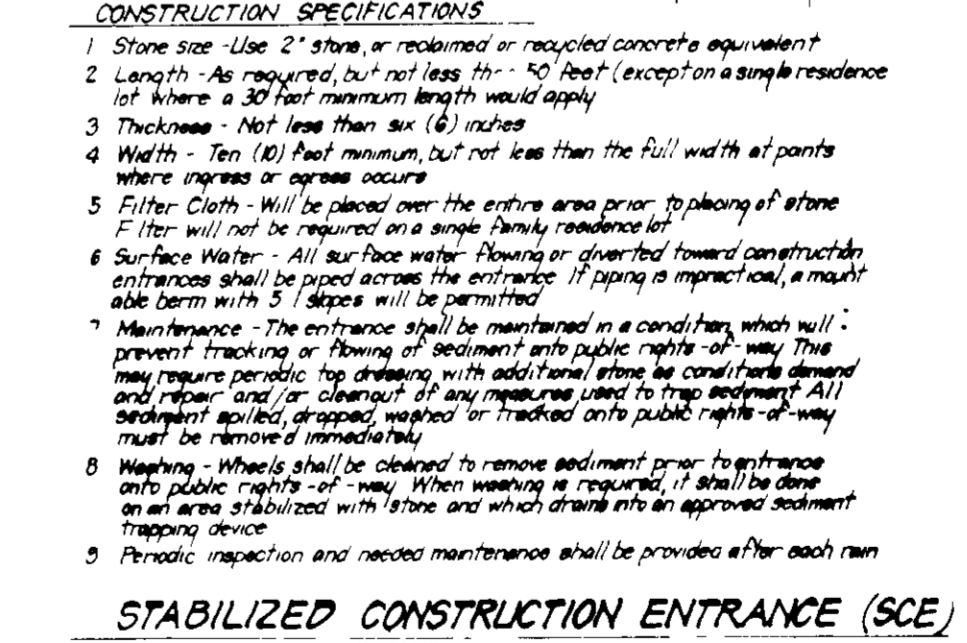

TYPE OF TREATMENT	CHANNEL	DIKE A	DIKE B
1	25-30% Seed or Straw Mulch	Seed or Straw Mulch	Seed or Straw Mulch
2	51-80% Seed or Straw Mulch	Seed or Straw Mulch	Seed or Straw Mulch
3	81-100% Seed or Straw Mulch	Seed or Straw Mulch	Seed or Straw Mulch

EARTH DIKE DETAIL (E.D.)
NO SCALE

CONSTRUCTION SEQUENCE

1	Obtain necessary permits.	5 days
2	Clean out and refurbish existing Sediment Basin/SWM pond installed under F-88-263. Install all additional sediment and erosion controls.	14 days
3	Grade lot areas and excavate for basements. Temporarily stabilize. Note work may not begin on lot #30 until the existing trap installed under F-88-263 has been removed.	80 days
4	Construct houses, driveways and sidewalks.	100 days
5	Fine grade and permanently stabilize all disturbed areas.	30 days
6	Remove any accumulated sediment from roadways. Flush storm drain system.	5 days
7	With approval of the sediment control inspector, convert sediment and erosion controls. Convert the Sediment Basin to a SWM facility according to the following:	5 days

CONSTRUCTION SPECIFICATIONS:

- Stone size - Use 2" stone, or reclaimed or recycled concrete equivalent.
- Length - As required, but not less than 10 feet (except on a simple residence lot where a 30 foot minimum length would apply).
- Thickness - Not less than six (6) inches.
- Width - Ten (10) feet minimum, but not less than the full width of points where ingress or egress occurs.
- Filter Cloth - Will be placed over the entire area prior to placing of stone. Filter will not be required on a simple family residence lot.
- Surface Water - All surface water flowing or diverted toward construction entrances shall be passed across the entrance. If spray or irrigation, a suitable berm with 5:1 slopes will be permitted.
- Maintenance - The entrance shall be maintained in a condition which will prevent tracking or flowing of sediment into public rights-of-way. This may require periodic top dressing with additional stone as soil erodes down and repair and/or cleaning of any equipment used to trap sediment. All sediment applied, sprayed, washed or tracked onto public rights-of-way must be removed immediately.
- Washing - Wheels shall be cleaned to remove sediment prior to entrance onto public rights-of-way. When washing is required, it shall be done on an area stabilized with stone and which drains into an approved sediment trapping device.
- Periodic inspection and needed maintenance shall be provided after each rain.

PERMANENT SEEDING NOTES

Apply to graded or cleared areas not subject to immediate further disturbance where a permanent long-lived vegetative cover is needed.

Soil Preparation Loosen upper three inches of soil by raking, discing or other acceptable means before seeding, if not previously loosened.

Soil Amendments In lieu of soil test recommendations, use one of the following schedules:

- 1) Preferred - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 sq ft) and 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft) before seeding. Follow or disc into upper three inches of soil. At time of seeding, apply 400 lbs per acre 30-0-0 ureaform fertilizer (9 lbs/1000 sq ft).
- 2) Acceptable - Apply 2 tons per acre dolomitic limestone (92 lbs/1000 sq ft) and 1000 lbs per acre 10-10-10 fertilizer (23 lbs/1000 sq ft) before seeding. Follow or disc into upper three inches of soil.

Seeding - For the periods March 1 thru April 30, and August 1 thru October 15, seed with 60 lbs per acre (14 lbs/1000 sq ft) of Kentucky 31 Tall Fescue. For the period May 1 thru July 31, seed with 60 lbs Kentucky 31 Tall Fescue per acre and 2 lbs per acre of (05 lbs/1000 sq ft) of weeping lovegrass. During the period of October 15 thru February 28, protect site by Option (1) 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring. Option (2) Use sod. Option (3) Seed with 60 lbs/acre Kentucky 31 Tall Fescue and mulch with 2 tons/acre well anchored straw.

Mulching - Apply 1 1/2 to 2 tons per acre (70 to 90 lbs/1000 sq ft) of untreated small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gallons per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes 8 feet or higher, use 348 gallons per acre (8 gal/1000 sq ft) for anchoring.

Re-seeding - Inspect all seeded areas and make needed repairs, replacement and reseedings.

TEMPORARY SEEDING NOTES

Apply to graded or cleared areas likely to be redisturbed where a short-term vegetative cover is needed.

Soil Preparation Loosen upper three inches of soil by raking, discing or other acceptable means before seeding, if not previously loosened.

Soil Amendments Apply 600 lbs per acre 10-10-10 fertilizer (14 lbs/1000 sq ft).

Seeding - For periods March 1 thru April 30 and from August 15 thru November 15, seed with 25 bushels per acre of annual ryegrass (32 lbs/1000 sq ft). For the period May 1 thru August 15, seed with 3 lbs per acre of weeping lovegrass (07 lbs/1000 sq ft). For the period November 16 thru February 28, protect site by applying 2 tons per acre of well anchored straw mulch and seed as soon as possible in the spring, or use sod.

Mulching - Apply 1 1/2 to 2 tons per acre (70 to 90 lbs/1000 sq ft) of untreated small grain straw immediately after seeding. Anchor mulch immediately after application using mulch anchoring tool or 218 gal per acre (5 gal/1000 sq ft) of emulsified asphalt on flat areas. On slopes, 8 ft or higher, use 348 gal per acre (8 gal/1000 sq ft) for anchoring.

Refer to the 1983 MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL for rate and methods not covered.

THIS DEVELOPMENT PLAN IS APPROVED FOR SOIL EROSION AND SEDIMENT CONTROL BY THE HOWARD SOIL CONSERVATION DISTRICT.
